1.1. Company Car Manager Example.....3

1. MDP Seminar Examples

The ten examples that are demonstrated in the MDP seminar are documented in full in these documents. All required window, menu and report settings and corresponding CTK window scripts are listed from the online seminar.

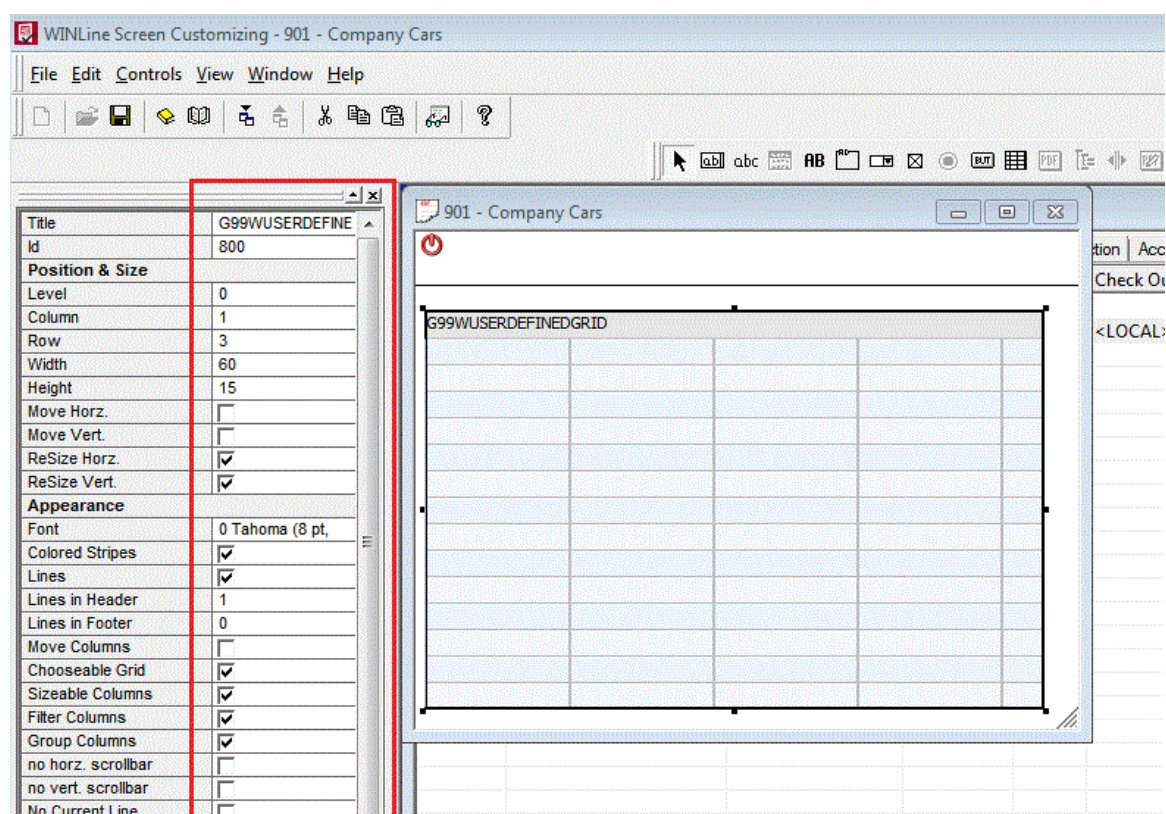

1.1. Company Car Manager Example

In the following example, a new window in WinLine START for entry and management of information on company cars for company employees is created. The window is bound in a CTK script to both a user-defined table and the standard employees Base Info table in the WinLine database and finally a new report is defined to print out the information on the company cars.

Table T699 "Company Cars" that was set up in a previous exercise will be used as the database table for this exercise.

Set up new window MAIN901, title "Company Cars", in CWLCTK for user group Management

The new window is created with option "Sizeable" activated.

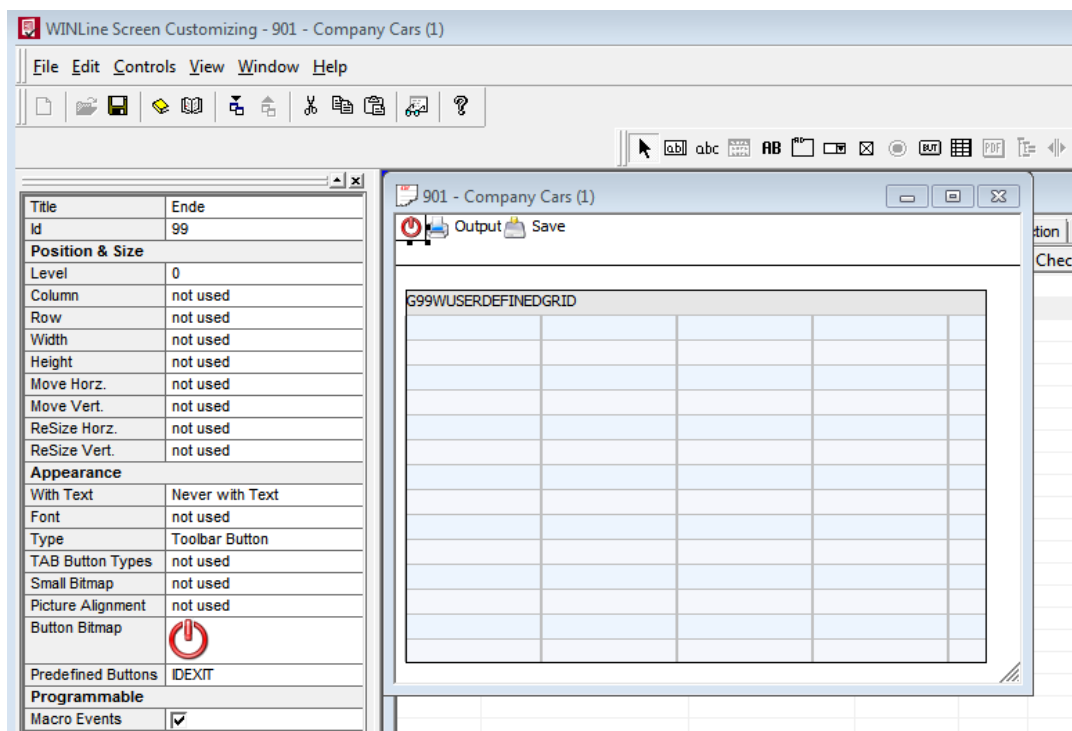

Enter CTK window script "CompanyCars" in the Macro Name field for the window.

In addition a new grid control element (ID800) is inserted with the following properties activated as illustrated above:

Width: 60

Height: 15
 Resize Horz.: Yes
 Resize Vert.: Yes
 Colored Stripes: Yes
 Lines: Yes
 Lines in Header: 1
 Chooseable grid: 1
 Sizeable Columns: 1
 Filter columns: 1
 Group columns: 1

Both a Menu-type button for printing (IDDRUCKEN), named OUTPUT, and a Toolbar-type button (IDSAVE), named Save, are inserted in the window.

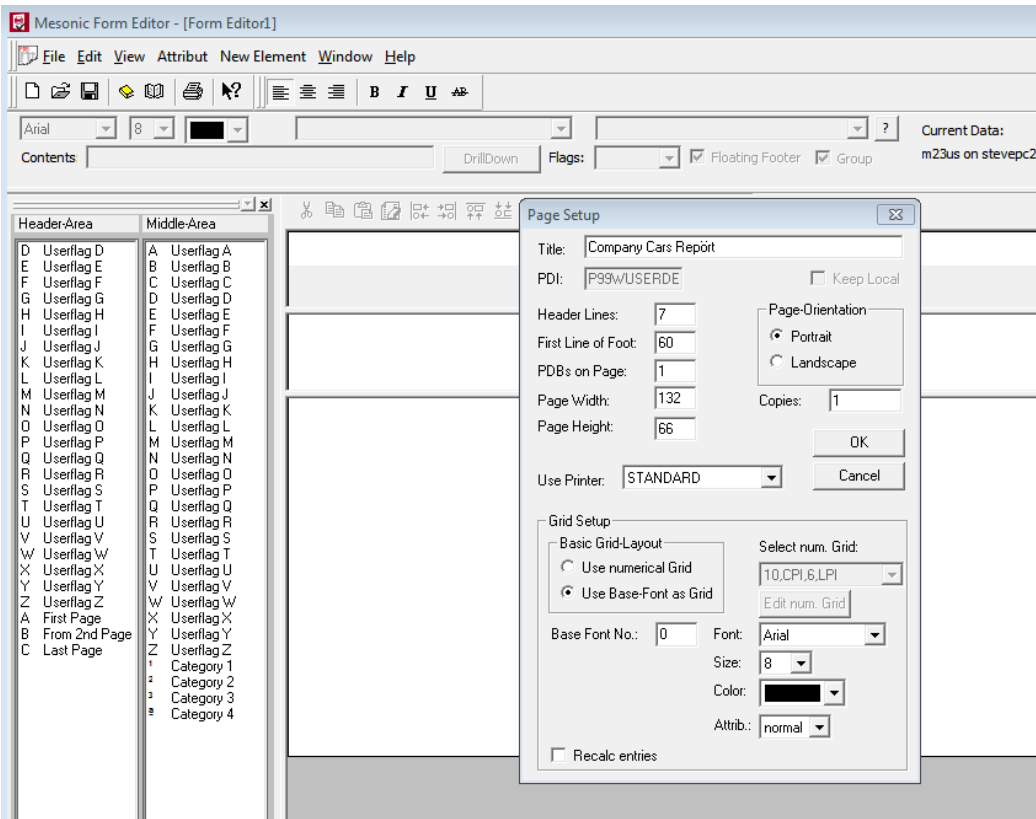

The Macro Events checkbox is set for the EXIT button as illustrated above.

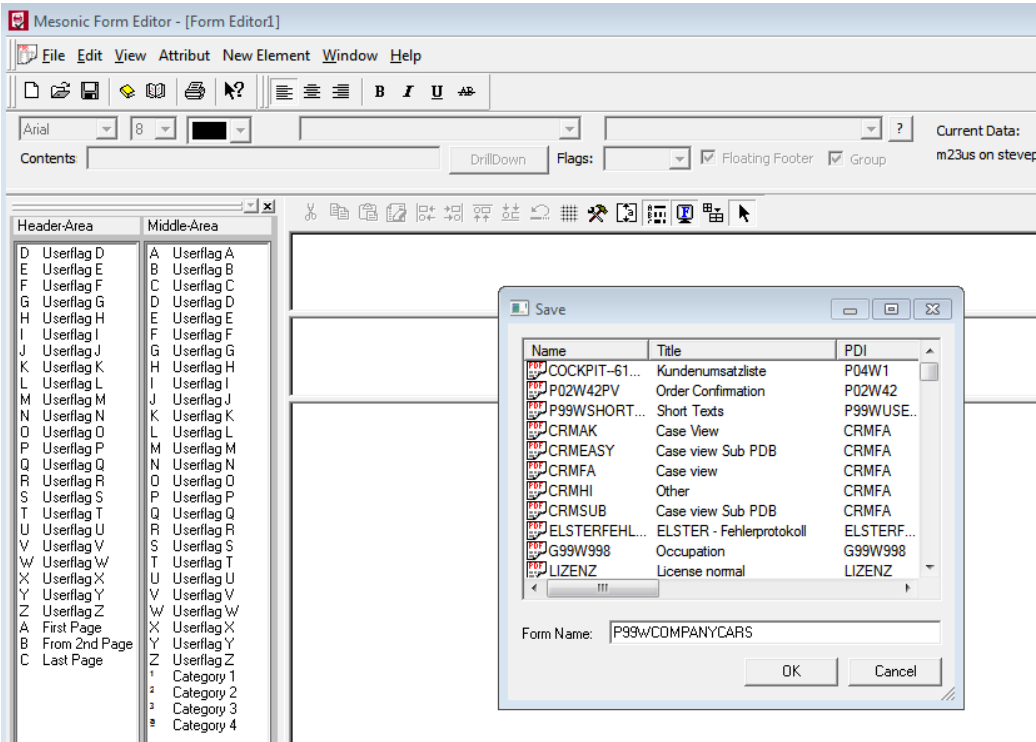

As a final measure in CWLCTK, a new menu item, "Company Cars" is set up for user group Management in the Parameters menu to open the new window (menu ID 901):

Set up new report form to print the contents of the Company Cars grid

Create a new report in CWLPDFE with title "Company Car Report" with 7 lines in the form header:

Then save the report under the form name P99WCOMPANYCARS:

The following static texts and variables are then entered in the form header area:

Text Report Title Header "Company Car Report"

Text All Employees

Text Date Variable 0/16

Text User Variable 0/14

Numeric Page Variable 500/0

Text Column header "Number" -> Drill Down

Text Column header "Name"

Text Column header "License Plate Number"

Text Column header "Type"

Text Column header "Acquisition date"

Line

The following variables are inserted in the form middle section:

Variable Number 699/0 (activate Drill down option for CWL object "Employees")

Variable Name 500/100 (activate Drill down option for CWL object "Employees")

Variable Licensenumber 699/1

Variable Type 699/2

Variable Acquisition 699/3

Save the report form once again and close the CWLPDFE.

Set up new CTK window script "Company Cars" in WinLine START

First option explicit declarations and a function for copying new employee records into T699 are declared in the General / Declarations section of the script:

'(Declarations)

Option Explicit

```
Dim tCC
Dim t401
Dim conn
Dim myWin
Dim Report
```

```
Set myWin = Nothing
Set conn = Nothing
Set tCC = Nothing
Set t401 = Nothing
Set Report = Nothing
```

```
Dim Company
Dim FY
```

```
Function OpenAndUpdateTable
    Dim Script
```

```
    On Error Resume Next
```

```
    Set tCC = conn.OpenTable2 (699,901)
```

```
    If err Then
```

```
        general.MsgBox "The Company Car table could not be opened."
```

```
        OpenAndUpdateTable = False
```

```
        Exit Function
```

```
    End If
```

```
    OpenAndUpdateTable = True
```

```
    'Copy employees from T401 "Employee Base Info" that are not in T699 "Company Cars" yet
```

```
    script = "insert into T699(U000) Select C000 from (T699 L "
```

```
    script = script & "right join T401 R On L.U000 = R.C000)"
```

```
    script = script & "where L.U000 Is Null And R.MESOCOMP = '" & Company & "'"
```

```
    If Not conn.ExecuteSQL (script) Then
```

```
        conn.CloseTable tCC
```

```
        general.MsgBox "Error upon synchronizing Company Car table with Employee Base Info"
```

```
        Exit Function
```

```
    End If
```

```
End Function
```

```
'End of (Declarations)
```

Next, an OnWindowOpen event handler for object CWLCurrentModule is inserted in the CTK window script to initialize the window grid control and to populate the grid with information from T699 and T401:

```
Sub CWLCurrentModule_OnWindowOpen(WindowId)
```

```
    If WindowId <> 901 Then
```

```
        Exit Sub
```

```
    End If
```

```
    Set myWin = CWLStart.CurrentModule.Windows.Item(WindowId)
```

```

Set conn = CWLStart.CurrentCompany.Connection
Company = CWLStart.CurrentCompany.Nr
FY = CWLStart.CurrentCompany.CompanyYear

General.WaitCursor = True
If Not OpenAndUpdateTable Then
    myWin.close
    Exit Sub
End If

Set t401 = conn.OpenTable2 (401,901,"C000")
If err Then
    general.MsgBox "Error when opening the Employee Base Info table"
    myWin.close
    Exit Sub
End If

Dim grid
Set grid = myWin.Controls.Item(800).Grid
grid.initUserGrid

grid.isRedraw = False
grid.AddColumn "Number", "%s", "r", "V", 0, 699,0,7,SORTFLAG+SIZEFLAG+HIDEFLAG
grid.AddColumn "Name", "%s", "l", "V", 0, 401,2,20, SORTFLAG+SIZEFLAG+HIDEFLAG
grid.AddColumn "License Plate", "T5,Z20,license number","l", "V", 0, 699, 1, 10,
SORTFLAG+SIZEFLAG+HIDEFLAG
grid.AddColumn "Type", "T1,Z50,Type", "l", "V", 0, 699, 2, 20, SORTFLAG+SIZEFLAG+HIDEFLAG
grid.AddColumn "Acquisition date", "T6,Z15,Acquisitiondate", "l", "V", 0,699,3,
10,SORTFLAG+SIZEFLAG+HIDEFLAG

grid.Header
Dim search
Set search = tCC.Select("order by U000")
If Search.RowCount > 0 Then
    Do
        'search.CopyResultsToWindow WindowId, 699
        t401.get myWin.Vars(699,0)
        grid.AddLine
        If search.NextRecord = False Then
            Exit Do
        End If
    Loop
End If
grid.IsRedraw = True
general.WaitCursor = False

End Sub

```

Now, an OnGridNewUserLine event handler is entered for object CWLCurrentWindow to output the row and column number of a new entered grid line:

```

Sub CWLCurrentWindow_OnGridNewUserLine(nFgId, nRow, nColumn, bResult)
    '

```

```
msgbox "newline row/column: " & nRow & "," & nColumn
    bResult.value = False
End Sub
```

To save entered company car data for an employee in the window grid, a new OnPushButton event handler is inserted in the script for object CWLCurrentWindow:

```
Sub CWLCurrentWindow_OnPushButton(nFgId, bResult)
    If nFgId = 798 Then 'Save button pressed
        General.WaitCursor = True
        Dim grid, i
        Set grid = CWLStart.CurrentModule.Windows.Item(901).Controls.Item(800).Grid
        For i = 1 To grid.linecount
            grid.GetLineValues i
        tCC.update
        Next
        General.WaitCursor = False
    End If
End Sub
```

To clean up and close table connections, a new OnWindowClose event handler for object CWLCurrentModule is inserted next in the CTK window script:

```
Sub CWLCurrentModule_OnWindowClose(WindowId)
    If WindowId <> 901 Then
        Exit Sub
    End If

    General.WaitCursor = False

    If myWin Is Nothing Then
        Exit Sub
    End If

    If conn Is Nothing Then
        Exit Sub
    End If

    If Not (tCC Is Nothing) Then
        conn.CloseTable tCC
    End If

    If Not (t401 Is Nothing) Then
        conn.CloseTable t401
    End If
End Sub
```

A new OnDynamicMenuCommand event handler for object CWLCurrentWindow is next inserted in the CTK window script to create the report object and print out the contents of the window grid when the OUTPUT button is printed. As specified in the example goals, the report can be output to the screen or the printer.

```
Sub CWLCurrentWindow_OnDynamicMenuCommand(nFgId, MenuIndex, bResult)
```

```
Dim outputtype
outputtype = cwlReportOnPrinter
If MenuIndex = 1 Then
    outputtype = cwlReportOnWindow
End If

If Not (Report Is Nothing) Then
    myWin.CloseReport (Report)
End If
Set Report = myWin.CreateReport (outputtype, "P99WCOMPANYCARS")

Dim pagenumber, hflags, mflags
pagenumber = 1
myWin.Vars(500,0) = pagenumber
hflags = "A"
mflags = "A"
Report.Header hflags

myWin.Vars.CreateVar 500,100,"1",100 'for the user name from T401

Dim grid, i
Set grid = CWLStart.CurrentModule.Windows.Item(901).Controls.Item(800).Grid

For i = 1 To grid.linecount

    grid.GetLineValues i

    'read user name and copy to Var 500/100
    t401.get myWin.Vars(699,0)
    myWin.Vars(500,100) = myWin.Vars(401,2)

    If (Report.Middle (mflags) = 1) Then
        Report.Footer hflags
        hflags = "B"
        mflags = "B" & mid(mflags, 2, 1)
        pagenumber = pagenumber + 1
        myWin.Vars(500,0) = pagenumber
        Report.Header hflags
        Report.Middle mflags
    End If
Next

Report.Footer "C"

If (outputtype = cwlReportOnPrinter) Then
    myWin.CloseReport Report
End If

End Sub
```

When the OUTPUT button is pressed (output to screen), the report is printed as in the following illustration:

As in a previous example, an OnCancel event handler for object CWLReport is entered in the CTK window script to allow the report preview window to be closed before the window itself is closed:

```
Sub CWLReport_OnCancel(ReportId, MayClose)
    MayClose.value = True
End Sub
```

Two events for handling clicks on drill-down links in reports (i.e, in the screen preview of the report) are now inserted in the CTK window script to conclude the example. First an OnDrilldown event handler for the CWLReport object to register the click:

```
Sub CWLReport_OnDrilldown(ReportId, DrillDownText, Text)
    general.MsgBox "Drilldown text: " & DrillDownText & ", itemtext: " & Text
End Sub
```

And the second event handler, OnPrintDrillDownItem for the CWLReport object:

```
Sub CWLReport_OnPrintDrilldownItem(ReportId, DrillDownText, View, Var, ItemText)
    DrillDownText.Value = "For the drilldown of " & myWin.Vars(View,Var)
End Sub
```
