

1 Throughput Batch Processing

Summary

A machine/workplace may also be configured in "throughput batch mode".

In [throughput batch mode](#) input material is continued being processed with unchanged number (throughput batch number) using an OP.

Please note: At machines with "throughput batch mode" it is impossible to log operations on at the same time.

Configuration

How to configure throughput batch processing is described [here](#).

Dialog

The entry functions for throughput batch processing at the terminal are identical to those for active batch tracing at the machine.
