

1 Workflow - Supplier Complaint Detail

1.1 Usage

This is the description of the standard workflow process to be used for processing supplier complaint details.

The workflow is kept under the name `HYDRA_complaintdetail_supplier`.

A workflow based on the process described here is instantiated when a complaint detail for a complaint of the type "supplier complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of supplier complaint details.

1.2 Process Chart

1.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on basis of the responsible person defined in the associated complaint detail at that time.

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint detail in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint detail, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

1.2.2 Process Step "Entry of complaint detail"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

Commentary

Check the items

Please check the items delivered and decide how to proceed.

Are the items ok? ☐

If not: are the items to be returned? ☐

If not: Are the items to be reworked? ☐

If not: are the items to be scrapped? ☐

Have the items been checked? ☐

In accordance with the status of the checkbox "Are the items ok?", it is decided whether the actual complaint reason has to be clarified or whether a relevant measure can be directly determined.

In the latter case, only, the checkboxes: "If not: are the items to be returned", "If not: are the items to be reworked?" and "If not: are the items to be scrapped?" determine the next processing step. In this regard, the system will only jump to the first measure selected (according to the sequence specified).

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have the items been checked?".

1.2.3 Ramification "Are the items ok?"

In accordance with the selection in the checkbox "Are the items ok?" in the previous process step, there is a ramification either to clarify the complaint reason or to subsequent allocation to other processing steps.

1.2.4 Ramification "Are the items to be returned?"

In accordance with the selection in the checkbox "If not: are the items to be returned?" in the process step "Check items" and/or "Rework items", there is a ramification either to arrange for the items to be returned or to subsequent allocation to other processing steps.

1.2.5 Ramification "Internal rework?"

In accordance with the selection in the checkbox "If not: are the items to be reworked?" in the process step "Check items" and/or "Rework items", there is a ramification either to rework the items or to subsequent allocation to other processing steps.

1.2.6 Ramification "Are the items to be scrapped?"

In accordance with the selection in the checkbox "If not: are the items to be scrapped?" in the process step "Check items" and/or "Rework items", there is a ramification either to charge the supplier for the parts or to clarify the course of action.

1.2.7 Process step "Clarification of complaint reason"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area with the heading "Sort out the reason for the complaint" and the instruction "Please sort out the reasons why the complaint has been opened?". At the bottom of the window, there is a checkbox labeled "Has the reason for the complaint been sorted out?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the complaint reason been sorted out?".

1.2.8 Process Step "Arrange return"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area with the heading "Have the items returned" and the instruction "Please arrange for the return delivery and inform the supplier about this measure.". At the bottom of the window, there is a checkbox labeled "Has the return delivery been arranged?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has return delivery been arranged?".

1.2.9 Process Step "Rework items"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

In accordance with the status of the checkbox "Has rework been successful?", it is decided whether the supplier has to be charged or whether a subsequent measure can be determined directly.

In the latter case, only, the checkboxes: "If not: are the items to be returned", "If not: are the items to be reworked again?" and "If not: are the items to be scrapped?" determine the next processing step. In this regard, the system will only jump to the first measure selected (according to the sequence specified).

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has rework been performed?".

1.2.10 Ramification "Rework ok?"

In accordance with the selection in the checkbox "Has rework been successful?" in the previous process step, there is a ramification either to charge the supplier or to the re-allocation of processing steps.

1.2.11 Process Step "Debit supplier's account"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the supplier's account been debited?".

1.2.12 Process Step "Clarification of course of action"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the further course of action been clarified?".

1.2.13 Process Step "Specify findings and complete"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the complaint detail been completed?".

1.2.14 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

1.3 Integration

Upon creation of a supplier complaint detail, an active entry of the object type `WFM_CONFIG` with parameter `ComplaintDetail_ComplaintType_LIEFERANT` is searched in the advanced object configuration of HYDRA.

The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaintdetail_supplier`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters can be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Content
Module	COMPLAINTDETAIL
Designation	Workflow for complaintdetail
Process alias name	ComplaintDetail_ComplaintType_LIEFERANT
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of supplier complaint
ID 2	Number of complaint detail
ID 3	Empty
ID 4	Empty
ID 5	Empty
Key 1	Data type of supplier complaint (default: REK)
Key 2	Area of supplier complaint
Key 3	Empty
Key 4	Empty
Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of supplier complaint> var_HYDRA_rekdetnr=<Complaint detail number>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber`, `var_HYDRA_reknr` and `var_HYDRA_rekdetnr` can be used to generate the reference to the associated supplier complaint detail directly.
