

1 Monthly Calculation Process

Summary

In the monthly evaluation the wage type postings are summarized for the settlement period and account limitations are carried out. The monthly evaluation can also be started for the current, ongoing month. In this case, only the previously existing results will be summarized. In contrast, accounts are only limited for past months.

When the daily results from previous months are corrected and reevaluated, the monthly evaluation for this month runs with the labor time calculation. Other months that lie between that month and the current month will also be evaluated.

This ensures that once the corrections have been made, the limitation of the accounts will again be made on the basis of the current data and that the account balances at the beginning and at the end of the month will also be corrected.

Messages resulting from the monthly evaluation

For company ... the settlement period for the year ... is missing Period ...

This message will be displayed for persons, for whose company no monthly periods are stored in the current year.

Wage type posting subject to authorization is available for monthly evaluation

This message will be created when there are still postings subject to authorization for this period in a monthly evaluation.

Locked at monthly calculation by application ...

When the monthly calculation was carried out, the person was locked. The application will show why the lock was set.

Account ... limited from ... to ...

If an account was limited during the monthly evaluation, this will be recorded together with a corresponding message in the month's messages listing.

Monthly evaluation has to be performed

When data are changed that are older than one month, the months between that and the current month will be subjected to an evaluation. The messages listing of the month will then show through this message that the current monthly result is no longer up to date.

Blocking time and attendance data after end of month

When the interface file is created, the monthly events for the people concerned are marked as finished. The function authorization PZD (PZE temporary data access) can be used as a control mechanism for specific users to define that data can no longer be modified once the month has been settled. Here, the authorization level determines how many months the user is allowed access:

PZD function authorization	Meaning
<i>Does not exist</i>	<i>Unlimited access</i>
<i>Authorization level 1</i>	<i>Access to the current month</i>
<i>Authorization level 2</i>	<i>Access to the current and the previously completed month</i>
<i>Authorization level 3</i>	<i>Access to the current and the two previously completed months</i>
<i>...</i>	<i>...</i>
