

1 Opening Hours

Summary

Menu	Master Data → Access Control → Opening Hours
Transaction code	acoh
Function authorization	acoh

Opening hours are times when an entrance is released after having checked access authorizations. It is impossible to open an entrance/access of this group outside of the opening hours for an access group. [Access time models](#) are assigned to [access groups](#) to define opening hours.

Field Descriptions

Access time model

[Access time model](#) to define the [access periods](#) when accesses to the access group are allowed.

Valid from, valid until

Validity period for opening times. If the end of the validity period is not defined, opening hours are valid without restrictions.

Only one opening time may be active for an access group. Different opening times may only be defined for an access group if these periods do not overlap.

If no opening hours are defined for an access group, doors of this access group cannot be opened.

When a new access group is created, an opening time with the [access time model](#) 1 is defined automatically, provided this model is at all available.
