

# 1 Batch History

## Overview

|                        |                                                     |
|------------------------|-----------------------------------------------------|
| Menu                   | Material management → Batch tracing → Batch history |
| Transaction code       | bathi                                               |
| Function authorization | bathi                                               |

## Usage

This batch history function is used to display all executed modifications for a batch.

## Integration

Each executed modification of batch data is documented. This refers to both manual modifications in the system and modifications that occur due to production flow, e.g. a status modification after processing a batch or after the minimum storage time expires. In this way, the batch data modifications are traceable.

The selection of the modifications or the log is made using the batch number that the user must enter and an evaluation period. A list is displayed that shows all of the modifications of the batch entered in chronological sequence.

## Selection criteria

The following selection criteria are available in the application:

### Batch number

Display of batch history for the selected batch number

### Material buffer

Display of batch history for selected [material buffers](#)

### Operation

Display of batch history for selected operation

### Created on ... to ...

Display of batch history is limited to the selected date

## Field descriptions

In addition to the standard batch-related data included here, the following additional information is displayed:

**Event**

Event that was recorded at that point in time, e.g.

- Entry as goods receipt batch
- Input batch logon/ logoff
- Output batch logon/ logoff
- Material consumption
- Goods movement
- Creating and modifying batches
- Creating and modifying serial numbers

**Date/ time**

Point in time of modification

**Editor**

Originator of batch data modification

**Serial number**

Assigned serial numbers for a batch that is listed as a serial number.

**Toolbar****Graphic batch tracing**

Opens the application [graphic batch tracing](#).
