

1 Group bonus records

Overview

Menu	Human resources management → Incentive wage → Group performance records
Transaction code	grprec
Function authorization	grprec.*

This list displays data records that lead to the *Daily group performance*. This list also shows the current status of the *Daily performance* data for *Premium groups*.

This means that the system does not access the daily results that have already been pre-calculated using wage calculation for *Premium groups*. Instead, the results displayed here are recalculated from the postings each time they are called. This makes it possible to check the effects on the *Daily group results* immediately after corrections, without having to calculate wages beforehand. When comparing values from the *Daily group performance* or the *Monthly group performance* with *Group premium records*, different values can be displayed if the postings from ADE, PZE or bonuses have been changed since the last wage calculation.

If you include labor times from time tickets in the premium calculation, you must first perform a wage calculation for any corrections to the posting data that lead to this time ticket, since this is the only way to update the time ticket.

If the time ticket is deduced from the PZE (personnel time management) *Wage type postings*, a *Personnel time calculation* of the PZW must be carried out in order to see updated data.

Selection criteria

Order postings, Pers. postings, bonuses:

If the corresponding option is activated, each posting is displayed in addition to the results records. These records are used to check which factors from the postings are included in the *Group results*.

Name of the *Premium groups*

You can filter the *Premium group* names with wildcards.

Field descriptions

Values are only in the columns if the column is relevant for the posting type and if it contains data. Otherwise, the field is empty.

Posting type

The system shows rows with *Daily results*, *Order postings*, *Pers. postings* and *bonuses*. *Daily results are always displayed*. Other *Posting types* are displayed if you click on the selection fields. Data records that are not result records are displayed in italic letter and gray for us to distinguish them from result records.

Standard time, bonuses, unproductive, time, duration, downtime, overhead costs, performance level

The meaning of these columns corresponds to that of the Monthly groups results application and represents the calculated Group premium performance for the corresponding day.

The following columns

The data belonging to the posting are displayed in the following column, depending on the posting type:

Further columns (co-called premium accounts) are available when using "Formula-based premium/incentive wages". We can also implement other calculation methods and types of premiums by using customer-specific formulas.
