

1 INI Data Configuration

Summary

Menu	System Administration → System Settings → Ini Data Configuration
Transaction code	inidcfg
Function authorization	inidcfg.*

Utilization

The INI Data Configuration function can be used to add further parameters/value pairs to an existing INI configuration or to change them.

Integration

The single functions and applications individually define which INI configuration is used in the system and which potential entries exist for them.

Prerequisite

You have already created an [INI configuration](#), which is added by further parameters/value pairs.

Field Descriptions

Section

Section name

Key

Unique key. The number behind the key is to be incremented if several entries are to be defined for the key.

Value

The value pertaining to the key

Active

Activates the entry

Comment

Comment field to describe the entry
