59881	Brown, Albert				167:00 167:00 7:30	1	167:00	0:00	159:30	20.0	95.51
85741	Meyers, Joseph				2154:30 2657:00 480:30	57	2202:30	48:00	1722:00	239.5	79.93

Usage

The evaluation/report contains one row per employee and day. The statistics only include those days on which at least one target time, one normal time, one attendance time or one absence is available. By grouping the statistics according to one or more columns (e.g. calendar week, person, month, etc.), group totals can be calculated and displayed. The percentages displayed are determined with respect to the target time and normal time.

The category in [Control of absence times](#) is used to define the following absence groups that can be displayed in the labor time statistics:

Category
Leave day/ half a leave day
Special leave
Illness with continued pay
Illness without continued pay
Accident at work
Cure
Maternity leave
Release
Further training
Flextime reduction
Overtime reduction
Public holiday
Other paid
Other unpaid

Suspended employment relationships (e.g. maternity leave, military service, temporary annuity, partial retirement) can be hidden in the target time if they are assigned to the category "Maternity leave" (MUT) in [Control of absence times](#).

Switching between the table and chart views is possible:

Field Descriptions

Days of absence/target time, Days of absence/normal time, ...

Labor time statistic shows the days in relation to the target time and normal time. Whole days are displayed in the result, if the respective duration (absence, illness, public holiday, ...) at least amounts to 75% of the target or normal time. If this is not the case, half days will be shown, provided that the duration is greater than or equal to 25 % of the target or normal working time.

% Illness/target time, % Illness/normal time

Percentage rate of the illness relating to the target or normal working time. These two fields are generally empty in the table. The percentages are only shown as group totals or as totals.

Toolbar

Delete selected lines

One or more records can be selected in the list of daily results and deleted from the display. In this way there is an option to delete public holidays from the statistics, for example. After the data is requested again, all records are displayed. If a grouping is selected, the entire grouping is deleted.

Labor time maintenance

Calls the [labor time maintenance](#) for the selected person. Labor time maintenance can also be called by double clicking on the posting in the message listing table.

Personnel scheduling

Calls the [personnel scheduling](#) for the selected person.
