1 Premium/ Incentive Wage Reports - Overview

Purpose

This function packet contains the user interface with reports, planning functions and master data for the function packet *Calculating premium/ incentive wages*.

Features

Results of premium and incentive wage calculations are displayed in the form of reports, lists and easy to read presentations:

- Definition of rules used to determine wage type, e.g. based on machine, order type or person
- Time limits on rules, e.g. during on-the-job machine training or maternity leave.
- Configuring reasons for bonuses and deductions using compensation control
- Update function for bonuses and deductions within the piecework calculation
- Lists of personal BDE documents that provide the data for wage calculation
- Listing of individually calculated time tickets including the performance efficiency rate for each processed order.
- Presentation of workday results for all people
- Configurable messages listing of irregularities during wage calculation plus correction notes

Selection Criteria

The application provides the following selection criteria:

Show authorized entries only

Bonus reasons are assigned to a responsibility area. If this option is checked only those bonus reasons are displayed for which the user has the corresponding responsibility area authorization for editing. Provided that the option is not active, all other bonus reasons may be displayed but not edited.

Field Descriptions

Reason, designation

Number and description of the bonus reason.

Affects

Affects target time or actual time when group bonuses are computed. Consequently, the bonus is processed as credit above the fraction line (target time) or below the fraction line (actual time), when the performance efficiency rate is calculated for the premium group.

This option does not affect bonuses for individual piecework. These bonuses/deductions are always charged to the standard time of piecework.

Posting indicator

Optional input. If this field includes "-AKK" bonuses/deductions with this bonus/deduction reason are not offset with piecework time tickets. This allows for any data to be recorded with bonuses/deductions, which exactly is not to be charged to piecework time tickets. The field is also used in premium/incentive wages based on formulas.

Responsibility area

Responsibility area to check authorizations. The responsibility area may also remain empty.

BDE authorization

If the bonus is entered by operators at the terminal: Authorization level for terminal postings. The person sending the posting must at least have the authorization level that is entered here. If no authorization level is entered the person sending the posting must at least be assigned to level 3.

Authorization required

If the bonus is entered by operators at the terminal:

If this option is checked the bonus requires approval if it is entered at the terminal.

If the bonus is entered by an administrator at the HYDRA client it is automatically considered as being approved.

Allocate if still subject to authorization

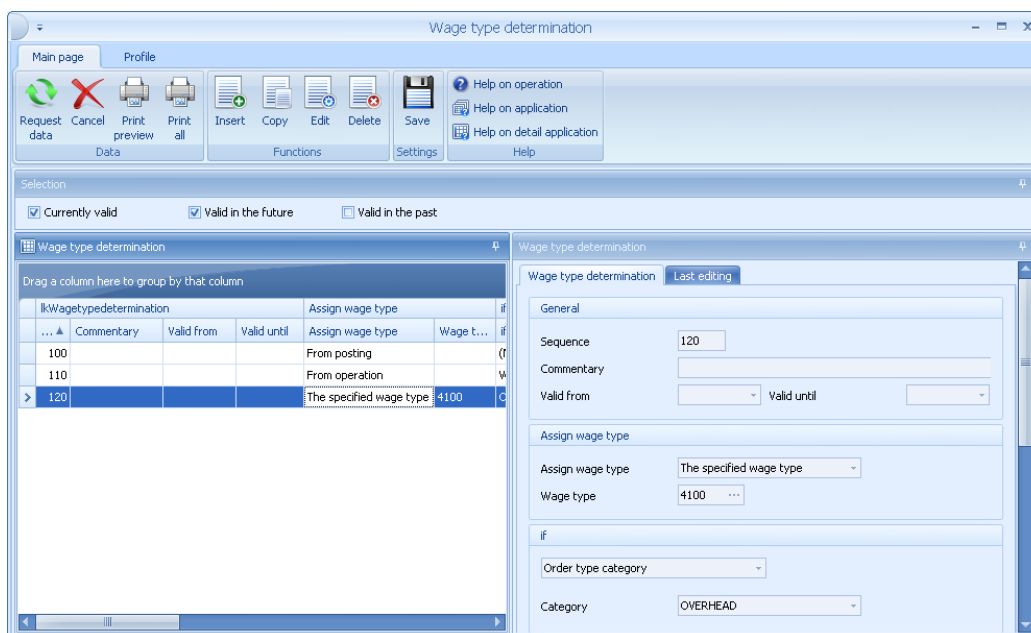

If the bonus is entered by operators at the terminal: If this option is checked the bonus is allocated for the computing of wages even if it is still subject to authorization. If the option is not checked bonuses that are subject to authorization are only allocated, once they have been approved.

3 Wage Type Determination

Overview

Menu	Master data → Incentive wage → Wage type determination
Transaction code	wtdet
Function authorization	wtdet.*

You use the *Wage type determination* to assign the wage type to the time tickets that are allocated individually for each person. To identify the relevant wage type, you create a set of rules that are processed in a specified sequence. Using these rules, the wage type is identified which then controls the further calculation of the incentive wage.

Example and explanation

Sequence 100: wage type from posting

The combination */* as reference/value means that this first rule uses the wage type of the original posting. With BDE personnel postings, this is the wage type that has been passed from the operation to the personnel posting when the personnel posting has been recorded.

Sequence 110: wage type from operation if wage type is empty

The combination wage type/"" (empty) as reference/value means that this second rule only applies if the time ticket does not yet have a wage type. In this case, the wage type of the operation is passed to the time ticket. If the posting does not include an operation or if the operation does not include a wage type, the wage type of the time ticket remains empty.

Sequence 120: assign wage type 4100 for overhead operations

This rule has the effect that wage type 4100 is assigned to all BDE personnel postings that include an overhead cost operation, regardless the wage type that is currently specified for the time ticket. The category of the BDE order type specifies if it is an overhead cost operation.

The special function authorization "**wtdet_foreman**" has been created for users who must make small changes to the *Wage type determination* in the day-to-day business to integrate specific exceptional situations. It is a **limited function authorization**. Users with this function authorization have less rights than users without this limited function authorization.

Users with the function authorization "wtdet_foreman" can only edit the following rules:

- Conditions for persons, machines, machine groups or premium groups
- Sequences from 500 to 600

With this function authorization, the user can remove single persons or machines from the piecework or the group incentives. The user can view other data records, but not edit them. The system rejects unauthorized editing attempts and issues the error message No. 1923 "Not authorized for this sequence or condition".

If you want to create and edit system configurations for sequences below 500 and above 600, the user must be the system administrator (without the function authorization "wtdet_foreman").

The initial data of the system contain the function authorization "wtdet_foreman" in the function profile "LLE user". Use the function profile "LLE admin" for users who must be fully authorized. The function profile "LLE admin" includes all authorizations of the profile "LLE user".

Optionally, you can also delete the function authorization "wtdet_foreman" from the function profile "LLE user".

Field description

Sequence

The rules are processed according to the specified sequence. If several rules contain the same entry in field *Sequence*, then the sorting is performed using the condition/value 1 to 5, the source of the wage type and the wage type.

Comment

Free comment field

Valid from/until

You can use these two fields to limit the validity period of rules.

Assign wage type

This setting specifies the wage type that is assigned to the time ticket if the rule is applied (according to the specifications made).

The specified wage type: the wage type specified in the field below is assigned.

From posting: the wage type passed with the posting is assigned. The posting itself is based on the time ticket. The wage type is usually the wage type of the BDE personnel posting.

From operation: the wage type stored with the operation is identified and assigned to the time ticket.

From HR master data: the wage type stored in the HR master data is identified and assigned to the time ticket.

If – conditions 1 to 5

Using up to five conditions, you can control when the rule is applied. All conditions specified must be true. Only then the rule comes into effect. The following conditions with the respective values are available:

Reference	Value	Available with function authorization wt det_foreman
Machine	Machine number	X
Machine group	Machine group	X
Person	Personnel number	X
The person's cost center	Cost center of the person defined in the HR master	
Cost center of the posting	Cost center of the posting	
Premium group	Premium group The value "*" is permitted. This means that the rule always applies, if a premium group is entered in the posting. The value "" (empty) is also permitted. This means that the rule applies, if no premium group is entered in the posting.	X
Premium indicator	Premium indicator defined for the person in the HR master	
Incentive wage indicator	Incentive wage indicator of the machine	
Piecework indicator	Piecework indicator of the operation	
Order type	Order type (e.g. is used to assign overhead cost orders to a different wage type)	
Category order type	Order type category (e.g. is used to assign overhead cost orders to a different wage type)	

Premium group type	Premium group type	
Wage type	Wage type Wage type that has been assigned to the posting up to now (for changes). Empty value is permitted.	
(none)	Always This reference does not restrict the rule, the rule always applies.	

Editing functions

The following dialog opens to edit a data record:

The screenshot shows a software window titled 'Edit' with a standard Windows-style title bar. Inside the window, there's a 'Main page' tab and a 'Wage type determination' section. The 'Last editing' button is highlighted. The 'General' section contains fields for 'Sequence' (120), 'Commentary' (empty), 'Valid from' (dropdown), and 'Valid until' (dropdown). The 'Assign wage type' section has 'Assign wage type' (dropdown with 'The specified wage type') and 'Wage type' (4100 with a dropdown arrow). Below these are four 'if' and 'and if' sections, each with a dropdown menu. The first 'if' section has 'Order type category' (dropdown) and 'Category' (OVERHEAD dropdown). The other three 'and if' sections each have a '(None)' dropdown.

4 Configuration of message listings

Overview

Menu	Master data → Labor time → Configuration of message listings
Transaction code	ptmc
Function authorization	ptmc

As individual messages from the day and month evaluations are rated with varying importance by different customers and some messages should not be shown at all, you can configure the contents of the message lists individually.

Use the *Configuration of message listings* to combine the messages in user-defined [lists](#).

Purpose

You can choose from the following two options to configure a new message list:

1. Create a new list and add the single messages.
2. Copy an existing list and delete the messages that are not required.

Field descriptions

Message listing

Number of the message list.

Use the message listing 999 to configure the messages that are displayed in the [labor time maintenance](#). Use the message listing 998 to specify the messages that are displayed when you open the message listing in the [monthly evaluation](#).

Message

Message to be displayed in the list.

The messages are generated by the labor time calculation and/or monthly evaluation. You cannot add custom messages.

5 Bonuses

Summary

Menu	Data Collection → Incentive Wages → Bonuses
Transaction code	bonus
Function authorization	bonus

Bonuses allow for corrective action to be taken with respect to calculating wages. Bonuses may be assigned for piecework for each day, person and order. For group premiums they may be allocated for each premium group and day.

Bonuses may have a positive or negative effect for employees. A bonus that has a negative effect also has a negative algebraic sign and is also designated as deduction.

The screenshot displays the 'Bonuses' application window. The main interface includes a 'Selection' section with filters for Person, Premium group, Reason, and Date. Below this is a table of bonuses, and a right-hand pane for detailed bonus entry.

Selection Section:

- Person: ... to ...
- Premium group: ...
- Reason: ...
- Date: 2/1/2011 to 2/28/2011

Bonuses Table:

Person	Name	Premium group	Date	Time	Value	Reason	Designation	Or
40789	Sheen, Edward		2/10/2011	8:00	1.32	3 Missing carrier		40
96665	Hanson, Betty		2/17/2011	10:00	1.12	11 Rework/Chamfering		40
59881	Brown, Albert	ASSY1	2/16/2011	12:00	7.00	11 Rework/Chamfering		
		ASSY2	2/16/2011	14:00	3.00	3 Missing carrier		
		PAINT1	2/17/2011	10:00	3.00	200 Tool damage		415

Detailed Bonus Entry Form:

- Person:** 40789 Sheen, Edward
- Operation:**
 - Order: 4000LL10 Sequence
 - OP: 0010 Split
 - Operation designation: Sawing 10.5 + 0.5
 - Article: 30-74532
 - Planned workplace: 40312
- Premium group:**
- Bonus:**
 - Reason: 3 Missing carrier
 - Date: 2/10/2011 Time: 8:00
 - Value: 1.32
 - Authorization: Authorized
- Information:**

Within the framework of wage computation that has been adjusted by the “premium/incentive wage based on formulas” option, bonuses are occasionally used to record external data.

Field Descriptions

Person, order/OP, premium group

Key to assign the bonus/deduction. When it comes to bonuses without premium group, the personnel number as well as the order number need to be indicated. However, personnel and order numbers are no mandatory fields for premium groups bonuses.

Article, planned workplace

Shows the article and workplace onto which the operation is planned. These fields derive from the operation and cannot be changed.

Reason

Reason for which the bonus/deduction has been assigned. The [configuration of bonus reasons](#) is described in a separate document.

Date, time

When it comes to bonuses/deductions for people, all bonuses are imputed to the person's time ticket that corresponds to the order/OP using the “date” criterion. In case the bonus/deduction matches several time tickets, it is divided among these time tickets.

For bonuses/deductions for premium groups, the bonus/deduction is assigned by the “date” and “premium group” and allocated on the corresponding premium group day.

Please note: The “time” factor does not affect the calculation of wages. It only specifies the input time when bonuses/deductions are recorded at the terminal.

Value

Bonus as decimal value. By default, the bonus is a point in time stated in the industrial minutes format HH.III. A negative algebraic sign identifies a “deduction”. Bonuses might be entered in other units, e.g. as percentage rates or quantities, when it comes to customer-specific wage calculation that is adjusted by the “premium/incentive wage based on formulas” option.

Quantity, t_e, approver

Instead of an absolute value, it is possible to enter a bonus t_e and a quantity, which is then automatically converted to an absolute value if the bonus was entered at the terminal. The values that were originally entered at the terminal are saved here.

The approving foreman may also be entered at the terminal and saved here.

6 Record Listing

Summary

Menu	Human resources management → Incentive wages → Record listing
Transaction code	reclis
Function authorization	reclis.*

The record listing displays the ADE personnel postings and the bonuses for people. It provides a preview of the results of the wage calculation to be expected. The documents are provided with an identifier for a time type with which the payment type is visible. Users in payroll accounting and the employees themselves use the record listing as evidence of the order processing performed.

From the record listing, ADE personnel postings can be modified, created and deleted using a simplified editing dialog. The simplified editing dialog is also the basis for the subsequent entry function in [labor time maintenance](#).

For times related to piecework, the standard time, the actual time and the resulting performance efficiency rate are indicated as percentages. However, bonuses and reductions are not yet considered in this performance efficiency rate calculation!

PLEASE NOTE:

The record listing does not cover all of the possible calculation rules for the wage calculation and it also does not include all customer-specific rules of the customer-specific payment forms when using the formula based incentive wages. It is a simplified preview based on the collected basic data.

Field descriptions

The data displayed corresponds with the [ADE personnel postings](#), the [bonuses](#) and the associated master data of machines, orders and bonus reasons. There is an independent display for the following fields in the record list:

Time type

For bonuses, the time type is "Bonus". For ADE personnel postings with a premium group, the time type is "Group incentives". For other ADE personnel postings, the time type of the wage type is displayed.

Daily assignment: collection

Shift date from the ADE collection

Daily assignment: wage

Intelligent daily assignment, including personnel time management. This data field is set by the PZW day evaluation and the wage calculation and it provides a connected and consistent consideration of the night shift, even with irregular working times. If this field is empty, the date from the "Daily assignment: collection" field applies for the wage as well.

Standard time

ADE personnel postings:

The standard time is calculated from yield, t_e and, depending on the basic settings, from scrap and if necessary t_r as well.

Bonus:

The bonus is displayed in this column if the [bonus reason](#) affects the target time.

Labor utilization

ADE personnel postings:

Labor utilization of ADE personnel postings (total of all resource performance accounts, except for “breaks”).

Bonus:

The bonus is displayed in this column if the [bonus reason](#) affects the actual time. Since these bonuses normally reduce the actual time, these bonuses are displayed with a **reversed algebraic sign**.

Performance level

The performance level is calculated in a simplified way from the calculated standard time and the labor utilization of the ADE personnel posting. For this reason, it does not always equal the performance level of the resulting time ticket.

For the record list, this is a display function of the collected data. For this reason, the calculated results displayed are to be viewed as independent and simplified calculated information and do not necessarily equal the final results of the incentive wage calculation.

Editing functions

This function allows for ADE personnel postings to be edited. However, bonuses cannot be edited here. They have to be kept using the [bonuses](#) application.

The below window opens to edit ADE personnel postings:

7 Message list

Overview

Menu	Human Resources Management → Maintenance → Messages listing
Transaction code	ptml
Function authorization	ptml

The message list displays messages for personnel time calculation, monthly calculation, and incentive wage calculation..

The screenshot displays the 'Messages listing' application interface. The main table lists messages with columns: Person, Date, and Posting. The first row is highlighted in red and reads 'Erroneous clocking sequence'. The right side of the window shows a form for selecting a person and supervisor, and a section for posting details.

Person	Date	Posting
BSP 667 Smith, Christian	29/01/2018	Erroneous clocking sequence
BSP 40256 Pernikova, Lisa	29/01/2018	Violation of rest period
BSP 40789 Sheen, Edward	29/01/2018	Account balance Gleitzeit is negative: -18:45
BSP 50014 Albert, Claudia	29/01/2018	Absence 400 "Illness" has been allocated
BSP 50014 Albert, Claudia	29/01/2018	Time ticket without duration
BSP 50201 Meyers, Harald Edw...	29/01/2018	Account balance Gleitzeit is negative: -5:00
BSP 59881 Brown, Albert	29/01/2018	Present although absence planned
BSP 59881 Brown, Albert	29/01/2018	Account balance Gleitzeit is negative: -24:15
BSP 85741 Meyers, Joseph	29/01/2018	Absence 450 "Leave" has been allocated
BSP 85741 Meyers, Joseph	29/01/2018	Account balance Gleitzeit is negative: -6:30
BSP 93856 Miller, Steven	29/01/2018	Maximum working time exceeded
BSP 93856 Miller, Steven	29/01/2018	Account balance Monatskonto is negative: -1:30
BSP 96665 Hanson, Betty	29/01/2018	Planned target time has not been reached
BSP 96665 Hanson, Betty	29/01/2018	Clock-OUT too early
BSP 96665 Hanson, Betty	29/01/2018	Core time violation
BSP 96665 Hanson, Betty	29/01/2018	Account balance Monatskonto is negative: -0:53
BSP 96665 Hanson, Betty	29/01/2018	Daily performance efficiency rate is high: 168.04
0001 10002630 White, Susan	29/01/2018	Absence 205 "3-Shift Afternoon" has been allocated
0001 10002630 White, Susan	29/01/2018	Wage type posting subject to authorization exists
0001 10002630 White, Susan	29/01/2018	Unplanned absent

The messages generated by the "Messages list" can be differentiated by the three colors.

1. The messages highlighted in red reading "Erroneous clocking sequence", shows errors that must be corrected so that the labor time calculation for the day in question can be processed without errors.

2. If there is a message highlighted in blue, e.g. "Wage type posting subject to authorization" are warnings that have an effect on the posting. These messages can be processed, but are not mandatory.
3. The black colored messages e.g. "Comes too early" are only an information message and have to be read.

Purpose

Selection criteria

The application provides the following selection criteria:

Message listing

You can use the number of the message list to access various [Configuration of message listings](#) lists that have been defined.

Field descriptions

Posting

The messages are identified by the following processing steps and are described in the following:

- [Process of labor time calculation](#)
- [Processing monthly calculations](#)
- [Incentive pay calculation](#)

Posting details

The fields "Posting details" shows further posting details. For example, the message details in the example " Erroneous clocking sequence" inform you that the clock-in has taken place at 08:00 and that the clock-out is missing.

The screenshot shows a web form titled "Posting" and "Posting details". The "Posting" section includes a "Date" dropdown set to "29/01/2018" and a "Posting" text field containing "Erroneous clocking sequence". The "Posting details" section includes several fields: "Designation 1" is a dropdown set to "In"; "Value 1" is a text field containing "8:00"; "Designation 2" is a dropdown set to "Out"; "Value 2" is an empty text field; and "Duration" is an empty text field.

Posting	
Date	29/01/2018
Posting	Erroneous clocking sequence

Posting details	
Designation 1	In
Value 1	8:00
Designation 2	Out
Value 2	
Duration	

Toolbar

Labor time maintenance

Calls the [Labor time maintenance](#) for the selected person. Labor time maintenance can also be called by double clicking on the posting in the message listing table.

Personnel scheduling

Calls the [Personnel scheduling](#) for the selected person.

Order-related postings

Click this button to call the [Order-related postings](#).

Send e-mail

Provided that an e-mail address is defined for the selected person in the HR master, an e-mail may be generated by clicking this button, which is addressed to this person.

Send e-mail to supervisor

If a supervisor with an e-mail address is stored for the selected person in the HR master record, you can use this button to generate an e-mail whose addressee is the superior.

8 Time tickets

Overview

Menu	Human resources management → Incentive wage → Group performance records
Transaction code	timtic
Function authorization	timtic.*

Time tickets show the activities and times used to calculate a premium wage for an employee. The system calculates time tickets with the time tickets from the collected output data of the order data collection, sometimes also using personnel time managements and bonuses. If feasible, a performance level is calculated even if it is not a piecework time ticket.

Selection criteria

Tab "Time type"

You can select time tickets for specified time types.

Name of the *Premium groups*

You can filter the *Premium group* names with wildcards.

Field descriptions

When using "Formula-based premium/incentive wages", the meaning of the fields may differ from the standard. You can find further information in your customer documentation.

Wage type

The wage type is identified using the collected output data and also using specific wage type determination.

Time type

The [Time type](#) is usually deduced from the time type which is stored in the wage type. The list makes no sense without having the time type displayed or available for selection.

Premium group •

In the case of time tickets in group incentives, this field is used to assign the time ticket to a premium group.

Duration

Contains the effective time ticket duration.

Bonuses

This column contains the bonuses that were credited to the time ticket.

Standard time

This column contains the standard time for piece work. Bonuses are not included!

Performance level

The system calculates the performance level using the standard time, bonuses and duration. The standard time is calculated from the quantity * t_e + t_r . The relevant quantities and whether the t_r is included are set in the basic settings or wage types.

Cost center

The cost center is transferred from the underlying recorded data.

Wage group

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Quantity

Total quantity used to calculate the standard time. Depending on the [Basic settings incentive wage](#) and the [Wage types](#) the yield and scrap quantities of different units of measure are used for this.

Reference

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Year, month, calendar week, day

You can activate these columns via the column configurator and allow statistical analysis.

Calculated at

The time when the time ticket was calculated by the system.

Tab "Bonus accounts"

The premium accounts are calculated customer-specifically with the „Formula-based premium/ incentive wage“. You can find further information on premium accounts of time tickets in your customer documentation.

Order, workplace/machine

Order and workplace/machine are taken from the collected postings, e.g. ADE personnel postings.

Bonus reason

Is completed for time ticket with the time type "Bonus".

t_e, t_r, t_{eb}, t_{rb}

Requirements for Incentive wage are from the underlying ADE personnel postings.

Comment

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Start, end

Reporting times from the underlying recorded postings.

RPA number (Resource Performance Account)

In the case of time tickets from production orders, the number of the RPA from which the time originates is shown here.

Shift type

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Yield (P) + scrap (P) + rework (P) + outstanding quantity (P)

Primary quantity from the underlying ADE personnel posting.

Tab "Person“:

Selection at the field from the HR master data to generate information and grouping in the table.

Tab "Additional information"

Configured HR master data fields.

Toolbar**Personnel day results**

Branching to the time tickets for the selected "Person day".

**Labor Time Maintenance**

You can directly go to "Labor time maintenance" to edit time in the Personnel Time Management.

**Order-related postings**

This button directly opens the order-related posting dialog to correct or analyze times of the Shop Floor Data Collection module.

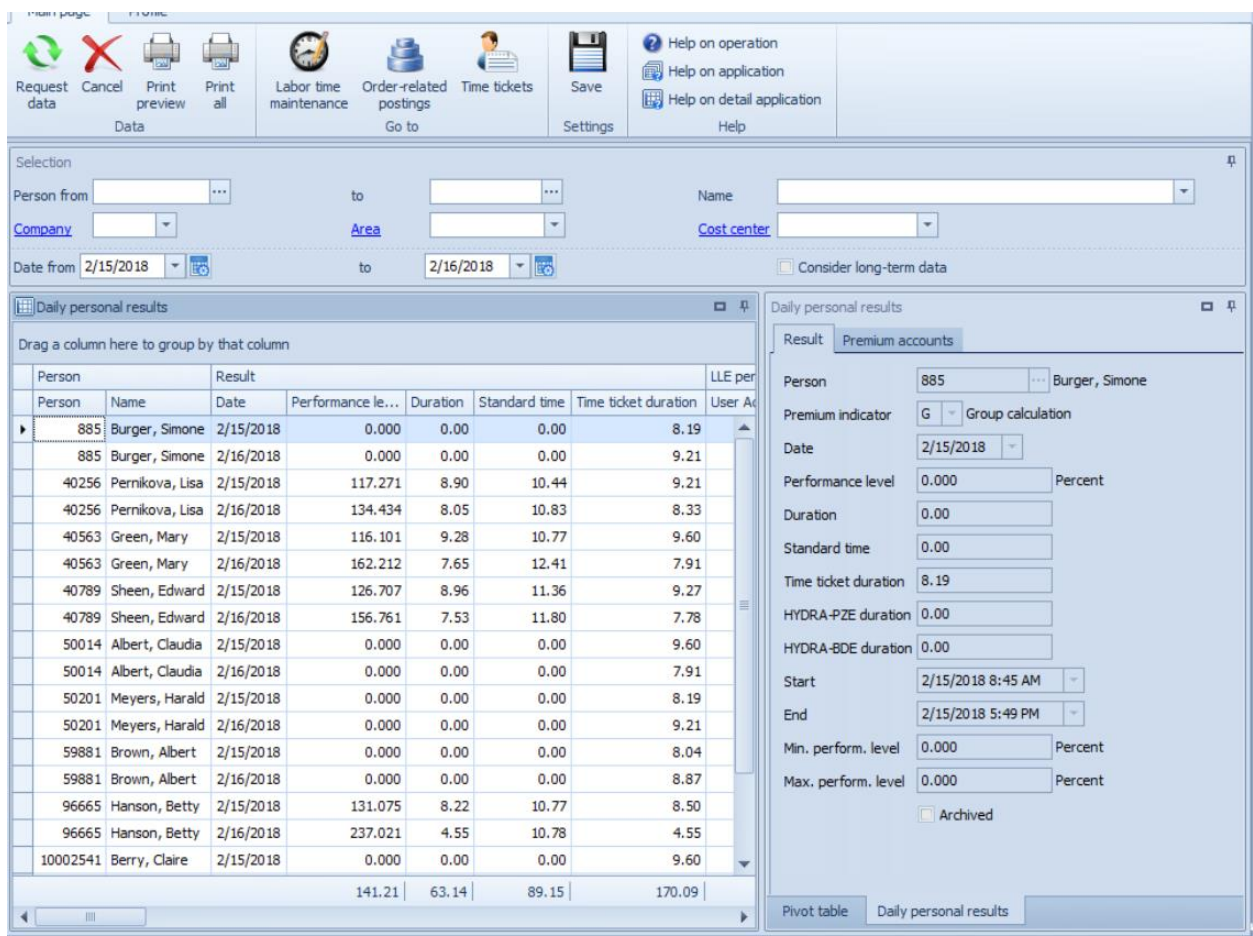

9 Personnel day results

Overview

Menu	Human resources management → Incentive wage → Personnel day results
Transaction code	perpd
Function authorization	perpd.*

The application "Personnel day results" offers an overview of incentives relating to individual persons. The "Personnel day results" application adds up information from the time ticket of the relevant person. The evaluation lists one line per person and day and displays the result in a summarized form for the day. The evaluation is used to check piecework results of the employee.

Only persons are displayed on the system who are actually working at the company. Also, only persons are displayed that have an LLE premium indicator attached. Person days with a value for the result columns are always displayed, even if the person has already left or does not have a premium indicator.

Person	Name	Date	Performance le...	Duration	Standard time	Time ticket duration	LLE per
885	Burger, Simone	2/15/2018	0.000	0.00	0.00	8.19

Field descriptions

Performance level

The performance level is calculated from the standard time and duration.

$$\text{Leistungsgrad} = \frac{\text{Vorgabezeit}}{\text{Dauer}} \cdot 100\%$$

Duration

The duration includes the actual time to calculate the daily performance efficiency rate.

The actual time depends on the setting for the "Incentive wages" in the field "Piecwork calc. of perf. eff. rate" of the set calculation time for the "Daily perf. eff. rate":

Only in the BDE:

Contains the sum of the actual time of the daily piecwork time tickets.

From BDE and PZE

The actual time for piecwork is calculated daily from the PZE time of the person minus the time that is collected on other time tickets.

$$\text{Istzeit} = T_{pze} - T_{ZL} - T_{EA} - T_{GK} - T_{KAR} - T_{GRP}$$

Times of the time ticket types are deducted in the PZE time which are:

Time wage

On-the-job training

Overhead costs

Waiting times

Group premiums The remaining time is the actual time to calculate piece work in the person day results.

The PZE time T_{pze} derives from the time ticket with the time type "Attendance". These are generated as follows:

1. If there is a wage type with an activated indicator "Personnel time for incentive wage", then the PZE time derives from the "PZE wage type postings" and is the sum of all wage types with active indicator "Personnel time for incentive wage".

2. If there is no wage type with the indicator "Personnel time for incentive wage", then the PZE time is taken from the PZE daily result.

Standard time

The column includes the standard time from the piecwork tickets. It also contains the bonuses.

Time ticket duration

This is the duration of all time tickets of an employee per day. An exception is the time ticket with the time type "Attendance".

PZE time

Duration from time tickets of the time type "Attendance".

BDE time

This column is not filled in the standard.

Start, end

This time period shows the time tickets from this person's BDE postings.

Max. perform. level, min. perform. level

You can find in this column the min. and max. performance level from the piecework time ticket for a specific person on this day. This allows outliers to be found quickly.

Archived

Archived, daily results cannot be recalculated.

Year, month, calendar week, day

You can activate these columns with the column configurator and get a statistical view.

Toolbar**Time tickets**

Branching to the time tickets for the selected "Person day".

**Labor time maintenance**

You can directly go to "Labor time maintenance" to edit time in the Personnel Time Management.

**Order-related postings**

This button directly opens the order-related posting dialog to correct or analyze times of the Shop Floor Data Collection module.

Detail applications

There is a pivot table integrated in the detail panel. This pivot table can be used to create summary reports based on the data displayed in the table.

The screenshot displays a software interface with a pivot table and a field list dialog. At the top, there is a checkbox labeled "Consider long-term data". Below it, the "Pivot table" section has a header "Drag filter fields here" and a sub-header "Drag column fields here". The pivot table itself has a table structure with columns: "Person", "Overall result", "Performance level", "Standard time", and "Duration". The data rows show various IDs and their corresponding performance metrics.

Person	Overall result	Performance level	Standard time	Duration
885		0.000	0.00	0.00
40256		125.423	21.27	16.96
40563		136.940	23.18	16.92
40789		140.425	23.15	16.49
50014				
50201				
59881				
96665	1			
10002541				
10002630				
Overall result	1			

A "Field list" dialog box is open, showing a list of fields: "Archived", "Area", "Car number plate", and "Car park slot". The "Add to" dropdown is set to "Filter area".

At the bottom of the interface, there are two tabs: "Pivot table" and "Daily personal results".
