1 Personnel Information

Purpose

The function package *Personnel Information* contains functions to display, maintain and select personnel information.

Implementation Considerations

Use this function package to:

- use [HR master data](#) and enter additional personnel data;
- use HYDRA personnel scheduling and get an overview of which employees are present or absent or to send messages to the personnel scheduling terminal.

Integration

The fields for additional information in the HR master data are available in other function packages for personnel time management and determination of incentive wages.

Features

- Attendance overview
 - Up to date overview of employees present with display of any running orders or of employees absent with absence reason and date of next planned presence
- Anniversary list
 - Display of employees' birthdays and company anniversaries for any period
- Additional HR master data fields
 - Freely configurable HR master data fields to record additional personnel information (e.g. car license plate, clothing size, educational qualifications) as the basis of personnel information systems
 - Use of the additional HR master data fields as selection criteria for lists, reports and statistics
- Messages
 - Message display at terminal (availability depending on the type of time & attendance terminal)

2 Attendance Overview

Overview

Menu	Human resources management → Reports → Attendance overview
Transaction code	paov
Function authorization	paov

A person's current status is shown in the attendance overview

The screenshot displays the 'Attendance overview' application window. The main area shows a list of employees with columns for Person, Name, Status, Date, and Time. The status column uses colored icons to represent different attendance states: green for 'Present', yellow for 'Planned absent', red for 'Unplanned absent', and blue for 'Off'. The right-hand pane provides a detailed view of the selected employee, Albert, Claudia, including fields for Company (BSP), Person (50014), Name, Status (Planned absent), Date, Time, Location, and Absence designation (Leave). The bottom section shows 'Operations logged on' with a table listing operations for the selected employee.

Person	Person	Name	Status	Status	Date	Time
BSP	50014	Albert, Claudia	Planned absent			
0001	10002854	Becker, J.A. Jürgen	Present since		6:53	
0001	10002541	Berry, Claire	Absent since		6:03	
BSP	59881	Brown, Albert	Off until		14:00	
BSP	40563	Green, Mary	Present since		7:59	
BSP	96665	Hanson, Betty	Planned absent			
0001	10003645	Hoffman, Paul	Present since		6:16	
BSP	93856	Müller, Stefan	Person does not clock			
BSP	50201	Mayer, Hugo Egon	Present since		8:46	
BSP	85741	Meyers, Joseph	Off until		22:00	
BSP	40256	Pernikova, Lisa	Unplanned absence since		6:00	
BSP	40789	Schäfer, Egon	Present since		5:57	

Person	Person	Last name	First name	Workplace	Cost center	Order	OP	Operation designation
BSP	50014	Albert	Claudia	TR 1	4210	S3000224	0100	Punching
BSP	50014	Albert	Claudia	60610		S6100305	0100	InjectionMolding

Selection criteria

The application provides the following selection criteria:

Status

The flags can be used to select whether to display those who are present, persons who are planned absent or who are unplanned absent or who have time off.

Field descriptions

Status

Present since

The employee is present since the point in time displayed. The date is only shown if it deviates from the current date.

Absent since

The status *Absent since* is displayed if the employee is absent, if he was present within the last six hours and if no working time is planned at the current point in time.

Planned absent

The employee is absent and absence planning exists.

Unplanned absent since

The employee is absent and, based on the planned shift time or the core work time for flextime and flexible shift employees, should be present.

Off

The employee is absent and no work time is planned for the current day.

Off until

The employee is absent and, based on the working time schedule, should be present at the specified point in time.

Off since

The employee was unplanned absent and the planned shift or rather core time is already over.

Person does not clock

For employees for whom the flag *Person does not clock* is set in the HR master data, the flag "Status person clocks" is not displayed in the skeleton time.

Location

For employees who are present, the location of the terminal at which the employee clocked in is displayed in this column.

Present at

For absent employees, displayed in this column is on which day the employee should again be present according to current planning.

Absence

Designation of the planned absence reason.

The display showing absences may be hidden depending on which user is logged in. The configuration that defines which absences should be hidden is made via the responsibility area in the absence payment. If a responsibility area is entered for an absence payment, then these absences are only shown for the users that have the *Display* authorization for this responsibility area:

The absence time is hidden for users who do not have authorization for the relevant responsibility area.

Any discrepancies in the attendance and absence overview may have been caused because persons have forgotten to clock out. These persons should be listed as absent on the next day at the latest.

In the *Date* column for the *Status* category, a date may only be displayed if it deviates from the current day.

Toolbar

HR master data

Call up [HR master data](#).

Labor time maintenance

Calling up [Labor time maintenance](#):

Personnel scheduling

Calling up [Personnel scheduling](#).

Send e-mail

If an e-mail address is defined for the person selected in the HR master data, then an e-mail can be created via this flag with this person as the addressee.

Detail applications

Operations logged on

For the person selected, the [Operations logged on](#) are displayed in the list Attendance overview.

Image

If an image is stored in the [HR master data](#), then it is displayed here.

3 Anniversary List

Summary

Menu	Master Data --> People --> Anniversary List
Transaction Code	pejl
Function authorization	pejl

This menu item allows for an anniversary list to be displayed and printed.

Anniversary list

Drag a column here to group by that column

Person	Anniversary in years	Date	Staff membership	Birthday
BSP 667 Smith, Christian	4/1/2013	20		
BSP 40563 Green, Mary	7/21/2013			50
BSP 40563 Green, Mary	8/11/2013	20		
0001 10002630 White, Susan	9/1/2013	25		
BSP 40256 Pernikova, Lisa	10/9/2013	20		
0001 10003645 Hoffman, Paul	10/14/2013			35

Person

Company: BSP
 Person: 667
 Name: Smith, Christian

Anniversary in years

Date: 4/1/2013
 Staff membership: 20
 Birthday:

Selection Criteria

The application provides the following selection criteria:

Staff membership

The staff membership of employees is listed if this option is checked.

Birthdays

The birthdays are listed if this option is activated.

Round anniversaries only

If this option is checked anniversaries that may be divided by five years are displayed only.

4 Configuration of HR Master Fields and Badge Fields

1.1 Summary

Menu	Master Data --> People --> Configuration of HR Master Data Fields Master Data --> Access Control --> Configuration of Badge Fields
Transaction Code	pefc
Function authorization	pefc

The personnel information license (PZE-INF) allows for additional information about individual people to be defined in the HR master. For badges this function is activated using the visitor's badge management license (ZKS-BAV). The configured fields are respectively displayed in the "additional info" tab.

30 possible fields are displayed in the configuration of HR master fields and badge fields. The position, designation, length, default value and visibility of additional fields may be changed here.

Field Descriptions

Position

Position of the field within the HR master dialog. By changing the number, a field may be moved forward or backward. All fields lying in between are moved by one position. This allows, for example, for a date or figure field to be moved forward.

Active

This checkbox is used to set the terminal to 'active' or 'inactive'. Inactive fields are not available in the selection of HR master fields for lists and reports.

Designation

Designation that is to be displayed in front of the corresponding field within the HR master.

Length

The field length can be configured here. The length has to range between 1 and the maximum length. The maximum field length cannot be changed.

Default value

The default value is automatically taken over when a person is created and may still be changed for the person.

Responsibility area

The responsibility are controls which user is allowed to use which additional field as selection criterion. The "use" function is checked in this context for the responsibility area. In addition to this, the "display" function of the responsibility area defines whether or not the user may view the corresponding additional field in the HR master.

Type

The data type of a field is predefined. If a field with another data type is required it is possible to move a field that is assigned to the corresponding data type to this position (see "position" field).

Only integer values may be entered in additional fields that are assigned to the "numeric" type.

5 Messages to Employees

Summary

Menu	Master Data --> People --> Messages to Employees
Transaction Code	pmes
Function authorization	pmes

The "messages to employees" function makes it possible to display any texts, when people try to post something at the terminal. In this way, people may be asked, for example, to contact the payroll office or they may be reminded of closing doors and windows or shutting down machines on the last working day of the week

The screenshot shows the 'Messages to employees' application window. The window has a title bar 'Messages to employees' and a menu bar with 'Main page' and 'Profile'. Below the menu bar is a toolbar with icons for 'Request data', 'Cancel', 'Print preview', 'Print all', 'Insert', 'Copy', 'Edit', 'Delete', 'Save', and 'Help'. The main area is divided into two panes. The left pane, titled 'Messages to employees', contains a table with columns: 'Personnel selection', 'Value', 'Name', 'Valid from', 'Valid until', and 'Quantity'. The table has three rows: '0001' (valid from 12/23/2013 to 12/23/2013), 'BSP' (valid from 12/23/2013 to 12/23/2013), and '0001' (valid from 3/25/2013 to 3/29/2013). The right pane, also titled 'Messages to employees', contains a 'Message' section with fields for 'Company' (0001), 'Personnel selection', 'Valid from' (12/23/2013), 'Valid until' (12/23/2013), 'Quantity' (1), 'Event', and 'Message' (Gong Xi Fa Xai!). Below the message section is a 'Clocking status' section with checkboxes for 'In', 'Out' (checked), 'Break', 'Absence reason' (checked), and 'Information'.

Utilization

Messages are sent in periodic intervals to the terminals so that a specific time passes until they are displayed on the terminals. The configuration is made within the PZE properties of the [terminal configuration](#). The "display duration of info" field specifies how long the messages are displayed at the terminal.

Not more than 20 characters may be entered per message line for terminals the display is 20 characters long (e.g. CT-370).

The terminals of the type CTP-340 or terminals by Kaba Benzing do not support the display of messages function.

Field Descriptions in the "message" tab

Company

Restricts the validity of the clocking authorization to a specific company.

Personnel selection

The next two fields allow for the "clocking authorization" to be restricted to a specific person or group of people. The HR master fields "cost center", "area", "employee subgroup", "activity" and "staff membership" may be selected as employee groups.

Valid from, to

Validity period of the message

Number

Specifies how often a message is to be displayed for a person at the terminal. If the field is left empty the message is shown without any restriction. When a message is changed, it is impossible to change the number, as otherwise it cannot be traced back how often individual people have already read the message.

Message

Message that is to be displayed at the terminal.

Clocking status

It may be defined for which clocking statuses messages are to be displayed for the person.

Field descriptions of the "validity" tab

Weekday

It may be selected at which weekdays the message is to be displayed.
