1 Personnel/Wage Type Statistics - Overview

Possible fields of application

Extensive statistics about labor times and wage types

Implementation notes

The function package is used if you:

- would like to evaluate labor times or the wage types generated thereof in a statistic for employees or groups of employees

Integration

This function package can only be used if Personnel Time Management is done in HYDRA (function package "assessment of labor times").

Functions

- Cost center posting
 - Posting of the recorded cost centers onto wage types and summation for month-end closing
 - Evaluation of the wage types posted onto the cost centers
- Labor time statistic
 - Evaluation of the target times, actual times and absence times per day including summation per employee, group of employees, weekday, calendar week or month to present the working time trend or as absence statistic
 - Display of planned working times and absence times for periods that have already been evaluated or future periods
 - Graphic presentation of the labor time statistic with configurable assignment of diagram axes
- Wage type statistic
 - Evaluation of working times, absence times and account changes on the basis of posted wage types including summation for employees, groups of employees, weekdays, calendar weeks and months
 - Summary of wage types to wage type groups including percentage weighting of individual wage types
 - Graphic presentation of the wage type statistic including percentage distribution (e.g. absences)

2 Wage Type Groups

Summary

Menu	Master data→ Labor time→ Wage type groups
Transaction code	wtgr
Function authorization	wtgr

The "wage type groups" module allows to comprise several wage types to one group. These groups can then be comprised to any form of list under [configuration of wage type statistics](#) or be used to restrict the display of the monthly wage types under [time sheet configuration](#).

The screenshot displays the 'Wage type groups' SAP interface. The left pane shows a list of wage type groups, including 'ABW' (Absence), 'EDU' (Education), 'FLE-' (Flextime Decrease), 'HOL' (Holiday), 'ILL' (Illness), 'LEA' (Leave), 'OVT' (Extra work), 'PRA' (Presence approved), 'PRC' (Presence), 'PRN' (Presence normal), 'PRP' (Presence unapproved), and 'PRR' (Presence rejected). The right pane shows the detailed view for the 'ABW' group. The 'Wage type group' is 'ABW' and the 'Responsibility area' is empty. The 'Wage type' is '400' and the 'Factor' is '100 %'. The 'Origin' is 'Daily wage type postings'. The 'Include wage type postings' section has four checked options: 'Postings that do not require approval', 'Approved postings', 'Unapproved postings', and 'Rejected postings'. The 'Last editing' section shows 'Modified by' as 'Miller' and 'Modified on' as '2/6/2002 4:31:54 PM'.

Field descriptions

Wage type group

Abbreviation and extensive designation of the wage type group

Wage type

Wage type that is to be assigned to the group.

Factor

Factor by which this wage type will be weighted within the wage type groups. With a negative factor the duration will not be added to the wage type group but be subtracted from it. This allows to form wage type differences.

Origin

This option can be used to select whether the daily wage type postings or the monthly wage types will be accessed. Monthly wage types will be assigned to the last day of a month's period. Monthly wage types can also be used to show account limitations, for example.

Include wage type postings

The buttons *Not subject to approval*, *Authorized*, *Unauthorized* and *Refused* define which wage types are to be displayed. This button is only available for daily wage types.

3 Wage Type Statistics

Summary

Menu	Human resources management→ Evaluations→ Wage type statistics
Transaction code	wtst
Function authorization	wtst

All times entered to wage types can be evaluated using the *Wage type statistics*.

Wage type statistics Bar chart

Usage

The user is only allowed to display that type of wage type statistics, for which he is authorized.

When the application is opened, the field Wage type statistics will automatically be preoccupied with the shortest existing list, for which the user is authorized.

It is possible to switch between the table view and the bar chart.

Selection criteria

The following selection criteria are available in the application:

List

Selection of the [wage type statistics](#) to be shown.

Duration minimum, maximum

Restrictions as to the daily minimum or maximum durations of the wage groups that must be shown in the list can be entered here.

Field descriptions

Charged cost center

Cost center to which the wage type is posted. This field is completed when [cost center postings](#) are used.

Toolbar

Labor time maintenance

Call of the [labor time maintenance](#) for the selected person. It is also possible to access the labor time maintenance by double clicking on the message in the messages listing table.

Personnel scheduling

Call of the [personnel scheduling](#) for the selected person.

Delete selected lines

One or several records can be marked in the list of the displayed wage types and be deleted from the display. This offers the possibility to delete public holidays from the statistics, for example. As soon as the data will be requested again, all records will be re-shown. If a grouping is marked, the entire grouping will be deleted.

4 Configuration of Wage Type Statistics

Summary

Menu	Master data → Labor time → Configuration of wage type statistics
Transaction code	wtsc
Function authorization	wtsc

The configuration of wage type statistics is used to assign wage type groups to freely definable statistics. The number of statistics and of wage type groups per [wage type statistics](#) is not restricted.

The screenshot shows the 'Configuration of wage type statistics' window. The left pane displays a tree view of 'Wage type statistics' with a table listing configurations. The right pane shows details for the selected configuration, including 'Wage type statistics', 'Responsibility area', 'Wage type group', and 'Last editing' information.

Wage type statistics	Wage type group
1 Absence Statistics	EDU Education
1 Absence Statistics	FLE- Flextime Decrease
1 Absence Statistics	HOL Holiday
1 Absence Statistics	ILL Illness
1 Absence Statistics	LEA Leave

Field descriptions

Wage type group

Number and/or abbreviation of the [wage type group](#), that is to be added to the list.

The wage type groups will be displayed in the wage type statistics sorted by the number and/or abbreviation of the wage type group.

5 Labor Time Statistic

Summary

Menu	Human Resource Management → Reports → Labor Time Statistics
Transaction code	ptst
Function authorization	ptst

Labor time statistics offers the option to display target times and attendance times as well as various absences for selected employees.

Usage

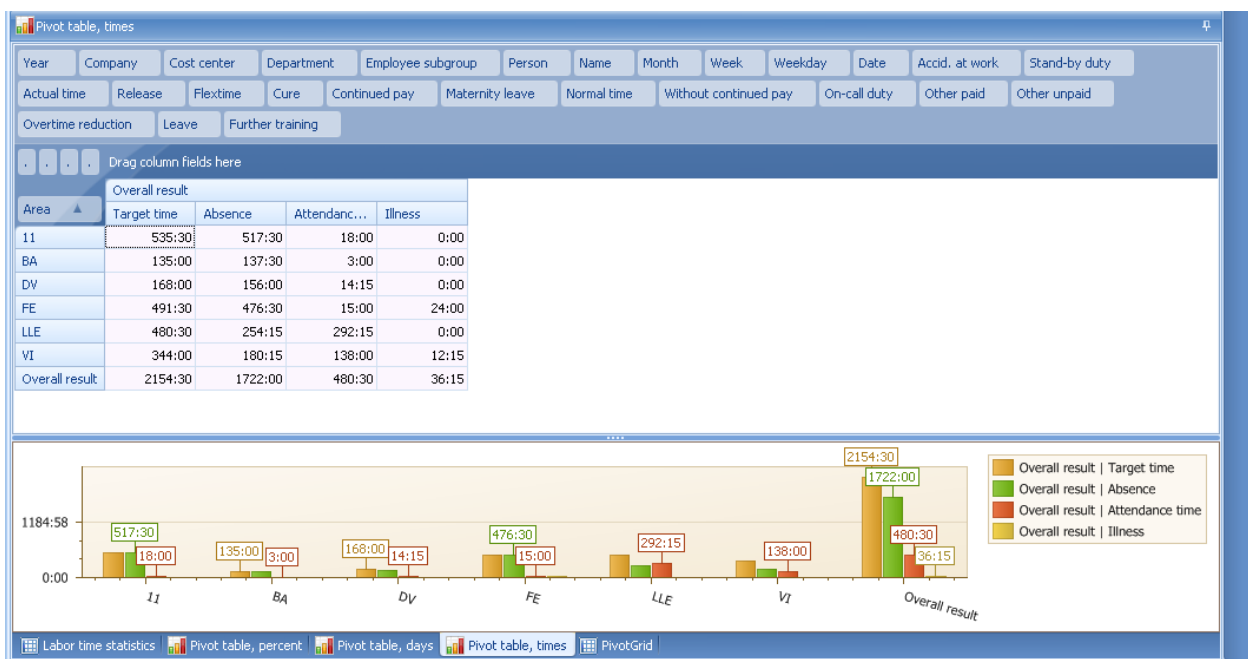

The evaluation/report contains one row per employee and day. The statistics only include those days on which at least one target time, one normal time, one attendance time or one absence is available. By grouping the statistics according to one or more columns (e.g. calendar week, person, month, etc.), group totals can be calculated and displayed. The percentages displayed are determined with respect to the target time and normal time.

The category in [Control of absence times](#) is used to define the following absence groups that can be displayed in the labor time statistics:

Category
Leave day/ half a leave day
Special leave
Illness with continued pay
Illness without continued pay
Accident at work
Cure
Maternity leave
Release
Further training
Flextime reduction
Overtime reduction
Public holiday
Other paid
Other unpaid

Suspended employment relationships (e.g. maternity leave, military service, temporary annuity, partial retirement) can be hidden in the target time if they are assigned to the category "Maternity leave" (MUT) in [Control of absence times](#).

Switching between the table and chart views is possible:

Field Descriptions

Days of absence/target time, Days of absence/normal time, ...

Labor time statistic shows the days in relation to the target time and normal time. Whole days are displayed in the result, if the respective duration (absence, illness, public holiday, ...) at least amounts to 75% of the target or normal time. If this is not the case, half days will be shown, provided that the duration is greater than or equal to 25 % of the target or normal working time.

% Illness/target time, % Illness/normal time

Percentage rate of the illness relating to the target or normal working time. These two fields are generally empty in the table. The percentages are only shown as group totals or as totals.

Toolbar

Delete selected lines

One or more records can be selected in the list of daily results and deleted from the display. In this way there is an option to delete public holidays from the statistics, for example. After the data is requested again, all records are displayed. If a grouping is selected, the entire grouping is deleted.

Labor time maintenance

Calls the [labor time maintenance](#) for the selected person. Labor time maintenance can also be called by double clicking on the posting in the message listing table.

Personnel scheduling

Calls the [personnel scheduling](#) for the selected person.
