

1 Survey of the data flow

All data are exchanged per tRFC/IDoc via the above-mentioned physical system interface of both systems. How often the file transfer is executed depends on the desired response times.

SAP system → HYDRA

The following overview shows the structure of data that can be taken over by the SAP system. The letter n behind  means that several (0-n) segments can be adopted. 1 signifies that only max. 1 such segment can be taken over.

➤ Production order data

-  1 Order header
 -  n long texts (order header)
 -  1 user fields (order header)
 -  n series of operations
 -  n material components
 -  n production resources and tools: resources
 -  n production resources and tools: documents
 -  n long texts (series of operations)
 -  1 user fields (series of operations)
 -  1 specific data for the coil-based manufacturing
 -  n production variants
 -  n order network
 -  n delete operations

HYDRA → PPS

- ### ➤ Confirmations of series of operations (time tickets)
-  Confirmations of time tickets (using PP-PDC)
