

1 Account Planning

Overview

Menu	Human resources management→ Evaluations→ Account planning
Transaction code	papl
Function authorization	papl

The Account Planning function allows to compute an account balance for a day in the future in consideration of planned absence. This function may, for instance, be used to prepare a remaining leave chart including the leave days not yet scheduled at the end of the year.

Account balance 11.0

Modification -15.0

Selection criteria

The application provides the following selection criteria:

Date

Date for which account planning is to take place. This date may be in the future.

Account

Selection of the account for which the planning is to be made.

Compression

This button may be used to set whether only the account balances at the date entered or in addition all days for which an account change has been registered are to be displayed at the date entered.

The account balance for the current date as displayed in the chart may deviate from that indicated in the schedule of [Current account balances](#), if not all labor time has been calculated for past days. Account planning considers such days by setting off planned account changes.
