1 Import Interface DNC

Summary

In the course of MES implementation different master data need to be created within MES. This may affect, to some extent, large datasets that cannot be edited manually or that require additional efforts to do so.

For this reason, master data can be transferred automatically from external systems. The information required for the master data transfer is described in the documentation dealing with the EIS-SDF interface.

Moreover, data may be exchanged automatically if CAD systems are connected. Further information on this interface is described in the EIS-CAD documentation.

Functions

Enterprise Integration Service to transfer NC programs and setting data from external programming systems by using HYDRA standard interfaces, such as EIS-SDF (master data transfer from external systems) or EIS-CAD (interface to CAD systems).

Please note: A transfer concept needs to be defined and the relevant transfer procedures have to be customized to implement this function for customers. The involved services for concept, customizing and implementation are not covered by the license.
