1 Group Incentives Reports - Overview

Overview

Purpose

This function packet contains the user interface with reports, planning functions and master data for the function packets *Calculating group incentives* and *Premium areas for group incentives*.

Integration

The function package *Calculating premium/ incentive wages* is required for this function packet.

Features

Results for group incentives are displayed in the form of reports, lists and clear presentations:

- Entering master data for group incentives
- Assignment of machines/ workplaces to group incentives
- Configuring reasons for bonuses and deductions using compensation control
- Update function for bonuses and deductions within the group bonus calculation
- Listing workday results for group incentives and the individual pay slips, from which the results were calculated
- Average monthly group results presented in graphs and tables
- Monthly overview of employee group participation in group incentives used to determine personal premium amounts
- Detailed listing of employee time tickets used to calculate group incentives
- Graphs and tables of group incentives by day for selectable periods of time

Bonuses

Summary

Menu	Data Collection → Incentive Wages → Bonuses
Transaction code	bonus
Function authorization	bonus

Bonuses allow for corrective action to be taken with respect to calculating wages. Bonuses may be assigned for piecework for each day, person and order. For group premiums they may be allocated for each premium group and day.

Bonuses may have a positive or negative effect for employees. A bonus that has a negative effect also has a negative algebraic sign and is also designated as deduction.

The screenshot displays the 'Bonuses' application window. The top menu bar includes 'Main page' and 'Profile'. Below the menu is a toolbar with icons for 'Request data', 'Cancel', 'Print preview', 'Print all', 'Insert', 'Copy', 'Edit', 'Delete', 'Authorize', 'Reject', 'Save', and 'Help'. The main area is divided into two sections: 'Selection' and 'Bonuses'.

The 'Selection' section contains fields for 'Person', 'Premium group', 'Reason', and 'Date' (ranging from 2/1/2011 to 2/28/2011).

The 'Bonuses' section displays a table with columns: Person, Name, Premium group, Date, Time, Value, Reason, Designation, and Order. The table lists several entries, including bonuses for Edward Sheen, Betty Hanson, and Albert Brown.

On the right side, there is a detailed form for a specific bonus entry. It includes fields for 'Person' (40789, Sheen, Edward), 'Order' (4000LL10), 'Sequence', 'OP' (0010), 'Split', 'Operation designation' (Sawing 10.5 + 0.5), 'Article' (30-74532), 'Planned workplace' (40312), 'Premium group', 'Reason' (3, Missing carrier), 'Date' (2/10/2011), 'Time' (8:00), 'Value' (1.32), and 'Authorization' (Authorized).

Within the framework of wage computation that has been adjusted by the “premium/incentive wage based on formulas” option, bonuses are occasionally used to record external data.

Field Descriptions

Person, order/OP, premium group

Key to assign the bonus/deduction. When it comes to bonuses without premium group, the personnel number as well as the order number need to be indicated. However, personnel and order numbers are no mandatory fields for premium groups bonuses.

Article, planned workplace

Shows the article and workplace onto which the operation is planned. These fields derive from the operation and cannot be changed.

Reason

Reason for which the bonus/deduction has been assigned. The [configuration of bonus reasons](#) is described in a separate document.

Date, time

When it comes to bonuses/deductions for people, all bonuses are imputed to the person's time ticket that corresponds to the order/OP using the “date” criterion. In case the bonus/deduction matches several time tickets, it is divided among these time tickets.

For bonuses/deductions for premium groups, the bonus/deduction is assigned by the “date” and “premium group” and allocated on the corresponding premium group day.

Please note: The “time” factor does not affect the calculation of wages. It only specifies the input time when bonuses/deductions are recorded at the terminal.

Value

Bonus as decimal value. By default, the bonus is a point in time stated in the industrial minutes format HH.III. A negative algebraic sign identifies a “deduction”. Bonuses might be entered in other units, e.g. as percentage rates or quantities, when it comes to customer-specific wage calculation that is adjusted by the “premium/incentive wage based on formulas” option.

Quantity, t_e, approver

Instead of an absolute value, it is possible to enter a bonus t_e and a quantity, which is then automatically converted to an absolute value if the bonus was entered at the terminal. The values that were originally entered at the terminal are saved here.

The approving foreman may also be entered at the terminal and saved here.

Editing Functions

The below window opens in which a data record can be edited:

Sign bonus.

Bonuses entered at the terminal might be subject to authorization if this is configured at the [bonus reason](#).

**Reject**

Function authorization: bonus.reject

Reject bonus. The bonus is not allocated in this case.

Bonuses entered at the terminal might be subject to authorization if this is configured at the [bonus reason](#).

3 Group bonus records

Overview

Menu	Human resources management → Incentive wage → Group performance records
Transaction code	grprec
Function authorization	grprec.*

This list displays data records that lead to the *Daily group performance*. This list also shows the current status of the *Daily performance* data for *Premium groups*.

This means that the system does not access the daily results that have already been pre-calculated using wage calculation for *Premium groups*. Instead, the results displayed here are recalculated from the postings each time they are called. This makes it possible to check the effects on the *Daily group results* immediately after corrections, without having to calculate wages beforehand. When comparing values from the *Daily group performance* or the *Monthly group performance* with *Group premium records*, different values can be displayed if the postings from ADE, PZE or bonuses have been changed since the last wage calculation.

If you include labor times from time tickets in the premium calculation, you must first perform a wage calculation for any corrections to the posting data that lead to this time ticket, since this is the only way to update the time ticket.

If the time ticket is deduced from the PZE (personnel time management) *Wage type postings*, a *Personnel time calculation* of the PZW must be carried out in order to see updated data.

Selection criteria

Order postings, Pers. postings, bonuses:

If the corresponding option is activated, each posting is displayed in addition to the results records. These records are used to check which factors from the postings are included in the *Group results*.

Name of the *Premium groups*

You can filter the *Premium group* names with wildcards.

Field descriptions

Values are only in the columns if the column is relevant for the posting type and if it contains data. Otherwise, the field is empty.

Posting type

The system shows rows with *Daily results*, *Order postings*, *Pers. postings* and *bonuses*. *Daily results are always displayed*. Other *Posting types* are displayed if you click on the selection fields. Data records that are not result records are displayed in italic letter and gray for us to distinguish them from result records.

Standard time, bonuses, unproductive, time, duration, downtime, overhead costs, performance level

The meaning of these columns corresponds to that of the Monthly groups results application and represents the calculated Group premium performance for the corresponding day.

The following columns

The data belonging to the posting are displayed in the following column, depending on the posting type:

Further columns (co-called premium accounts) are available when using "Formula-based premium/incentive wages". We can also implement other calculation methods and types of premiums by using customer-specific formulas.

4 Time tickets

Overview

Menu	Human resources management → Incentive wage → Group performance records
Transaction code	timtic
Function authorization	timtic.*

Time tickets show the activities and times used to calculate a premium wage for an employee. The system calculates time tickets with the time tickets from the collected output data of the order data collection, sometimes also using personnel time managements and bonuses. If feasible, a performance level is calculated even if it is not a piecework time ticket.

Reference

Selection criteria

Tab "Time type"

You can select time tickets for specified time types.

Name of the *Premium groups*

You can filter the *Premium group* names with wildcards.

Field descriptions

When using "Formula-based premium/incentive wages", the meaning of the fields may differ from the standard. You can find further information in your customer documentation.

Wage type

The wage type is identified using the collected output data and also using specific wage type determination.

Time type

The [Time type](#) is usually deduced from the time type which is stored in the wage type. The list makes no sense without having the time type displayed or available for selection.

Premium group •

In the case of time tickets in group incentives, this field is used to assign the time ticket to a premium group.

Duration

Contains the effective time ticket duration.

Bonuses

This column contains the bonuses that were credited to the time ticket.

Standard time

This column contains the standard time for piece work. Bonuses are not included!

Performance level

The system calculates the performance level using the standard time, bonuses and duration. The standard time is calculated from the quantity * t_e + t_r . The relevant quantities and whether the t_r is included are set in the basic settings or wage types.

Cost center

The cost center is transferred from the underlying recorded data.

Wage group

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Quantity

Total quantity used to calculate the standard time. Depending on the [Basic settings incentive wage](#) and the [Wage types](#) the yield and scrap quantities of different units of measure are used for this.

Reference

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Year, month, calendar week, day

You can activate these columns via the column configurator and allow statistical analysis.

Calculated at

The time when the time ticket was calculated by the system.

Tab "Bonus accounts"

The premium accounts are calculated customer-specifically with the „Formula-based premium/incentive wage“. You can find further information on premium accounts of time tickets in your customer documentation.

Order, workplace/machine

Order and workplace/machine are taken from the collected postings, e.g. ADE personnel postings.

Bonus reason

Is completed for time ticket with the time type "Bonus".

t_e, t_r, t_{eb}, t_{rb}

Requirements for Incentive wage are from the underlying ADE personnel postings.

Comment

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Start, end

Reporting times from the underlying recorded postings.

RPA number (Resource Performance Account)

In the case of time tickets from production orders, the number of the RPA from which the time originates is shown here.

Shift type

Reserved for customer-specific processing with "Formula-based premium/incentive wages".

Yield (P) + scrap (P) + rework (P) + outstanding quantity (P)

Primary quantity from the underlying ADE personnel posting.

Tab "Person“:

Selection at the field from the HR master data to generate information and grouping in the table.

Tab "Additional information"

Configured HR master data fields.

Toolbar**Personnel day results**

Branching to the time tickets for the selected "Person day".

**Labor Time Maintenance**

You can directly go to "Labor time maintenance" to edit time in the Personnel Time Management.

**Order-related postings**

This button directly opens the order-related posting dialog to correct or analyze times of the Shop Floor Data Collection module.

5 Group performance development

Overview

Menu	Human resources management → Incentive wage → Group performance records
Transaction code	pergd
Function authorization	pergd.*

This application shows you the daily results of the premium groups. This evaluation can display the performance of one or more premium groups over time in tabular and graphical form. The performance is displayed per group and day.

The screenshot shows the 'Daily group performance' application window. The 'Selection' section includes filters for 'Premium group from' (A to Z), 'Date from' (2/1/2011 to 2/28/2011), and a checkbox for 'Consider long-term data'. The 'Grid' section displays a table with the following data:

Premium group	Date	Performance I...	Standard time	Duration	Bonuses	Credit note	Q5-Kennzahl	Gutmenge	Ausschuss	Termintreue	Liefertage	Lieferu
ASSY1	2/1/2011	128.351	20.25	15.77	0.00	0.00	137.00	1823.000	0.000	0.000	0.000

		114.90	941.62	819.52	3.00	10.00						

Selection criteria

Name of the *Premium groups*

You can filter the *Premium group* names with wildcards.

Field descriptions

The meaning of the other fields corresponds to that of the [Monthly group performance](#) application and represents the calculated [Results of Group incentives](#) for the relevant day.

Year, month, week, weekday

These columns can be displayed if required and allow for statistic summarizations.

Adding performance level

The performance level of the Total lines are calculated with the columns Standard time and Duration. For a meaningful summarized display of the performance level, all types of group bonuses used must be structured in such a way that the performance level can also be generated in summary form as a quotient of the Standard time and Duration. This is guaranteed for the standard types like Incentive and Utilization bonus. Any other bonus types must be customized like customer-specific bonus types with "formula-based premiums/performance wages".

Detail applications

Table details

Data display from the selected table row The meaning of the other fields corresponds to that of the [Monthly group performance](#) application and represents the calculated [Results of Group incentives](#) for the relevant day.

The screenshot shows a software window titled "Details zur Tabelle". It has two tabs: "Gruppenleistungsentwicklung" and "Prämienkonten", with the latter being active. The window is divided into two main sections: "Prämiengruppe" and "Ergebnis".

Prämiengruppe section:

- Prämiengruppe: BE MONTA ... Ber. Montage
- Bezeichnung: Ber. Montage
- Art: Prämienbereich (dropdown menu)
- Sonstige Art: (empty checkbox)

Ergebnis section:

- Datum: 01.02.2011 (dropdown menu)
- Leistungsgrad: 128,171 Prozent
- Vorgabezeit: 41,17
- Dauer: 32,12
- Zuschläge: 0,00
- Gutschrift: 0,00
- Unprod. Zeit: 0,00
- Ausfallzeit: 0,00
- Prämiendurchschnitt: 0,00
- Wartezeit: 0,00

At the bottom, there is a taskbar with icons for "Tabellenansicht", "Details zur Tabelle" (active), "Grafik 1", "Grafik 2", and "Pivot-Tabelle".

Graphic 1

Display of the table content as a line chart. This chart enables you to detect time trends.

Graphic 2

Display of the table content as a three-dimensional bar chart. This is a good way of conducting comparisons.

Pivot table

You can use the pivot table to make evaluations of the available summarization criteria. The result column is displayed in graphic form.

6 Monthly Group Performance

Summary

Menu	Human Resources Management → Incentive Wages → Monthly Group Performance
Transaction code	pergm
Function authorization	pergm.*

This application shows the results of premium groups for a selected month.

Selection Criteria

Year, month

Year and month are preassigned to the previous month. If data relating to the past is requested long term data, which has already been archived, is automatically accessed, if required.

Field Descriptions

Please note that if the “premium/incentive wage based on formulas” is in use it might be the case that the described fields deviated from the standard or that not all of the fields are assigned to reasonable values.

Premium group, designation, type

Premium group data.

Performance level

Final result as [performance level](#) or rate of capacity utilization according to the rules of [group premiums](#) in percent. Even for customer-specific premium forms with the “premium wage/incentive wage based on formulas” the performance level is shown as final result in summary as it is displayed in the graphic view.

Standard time

The standard time computed from the standard times t_e , t_r and the produced quantity is displayed for [incentive bonuses](#) and [utilization bonuses](#). Order postings at machines of the premium group are the basis for the produced quantity. In general a standard time, which results in the computation of the incentive bonus, is indicated even for customer-specific premium types with the “premium/incentive wage based on formulas”.

Duration

The entire, personal processing time according to the above formula is included for the [incentive bonus](#). This is the machine scheduling time for the [utilization bonus](#). In general a duration, which results in the computation of the performance level, is indicated even for customer-specific premium types with the “premium/incentive wage based on formulas”.

Bonuses

This is the total of assigned bonuses and deductions for incentive bonuses. When it comes to utilization bonuses the column includes the numbers 1 to 99.

Credit note

When it comes to the utilization bonus, the column includes the bonuses ranging between the numbers 100 to 9999. This column is irrelevant for incentive bonuses.

Unproductive time

With utilization bonus: Total of the durations of unauthorized, unproductive overhead cost order postings. This column is irrelevant for incentive bonuses.

Downtime

With utilization bonus: Total of the durations of approved, unproductive overhead cost order postings. Authorization is given by reposting the times to the resource performance account “UB” by the foreman. This column is not included in the computation of performances and has only been designed for information purposes. This column is irrelevant for incentive bonuses.

Premium average

With incentive bonus. Total of all personal overhead cost time including operation numbers the first character of which is less than 5 (e.g. OPs ranging between 0000 and 4999 for operation numbers that are four characters long). This column is irrelevant for utilization bonuses.

Waiting time

With incentive bonus: Total of all personal overhead cost times including operation numbers the first character of which is greater than or equal to 5 (e.g. OPs ranging between 5000 and 9999 for operation numbers that are four characters long). This column is irrelevant for utilization bonuses.

Premium accounts

Customer-specific computations are made in premium accounts if the "premium/incentive wages based on formulas" function is in use. No premium accounts are filled by default.

Date from, date to

Evaluation period

Detailed data on individual days and even on individual HYDRA-ADE postings that are included in the computation of these monthly results can be found in the ["daily group performance"](#) application.

Detail Applications

The bar chart displays and compares the performance levels of premium groups and premium areas, if necessary.

7 Personal Group Participation

Summary

Menu	Human Resources Management --> Incentive Wages -->Personal Group Participation
Transaction Code	pgpart
Function authorization	pgpart.*

This application shows the times which individual people have worked in the single premium groups. This helps to prove every month from which premium group the people receive which kind of group bonus.

The labor times are based on the [time tickets](#) assigned to the "group premium" time type and are recalculated every time the list is opened.

Selection criteria

Year, month

The year and month fields are preassigned to the previous month. If data is requested in the past long-term data of the archived data area is automatically accessed, if required.

Field Descriptions

Personal group participation [hours]

Labor times are based on the [time tickets](#) assigned to the "group bonus" time type.

The meaning of the other fields corresponds to that of the [monthly group performance](#) application and represents the computed [results for the group bonus](#) for the corresponding day.
