1 Overview

The MES Development Suite provides you with development tools in order to enable the customer to develop applications and functions independently.

This document describes the possibility to develop log elements for machine communication independently, which may then be integrated in the HYDRA PCC. Since this constitutes software development involving programming languages and development environments outside HYDRA, it is not described here in detail. Integration documentation and programming rules are provided separately. Coordination with / training by MPDV is always required to get familiarized with the technology.

Scope of MDE-PKE license:

Development framework for independent creation and configuration of drivers for connecting machines, systems and other peripheral equipment via the HYDRA process communication controller PCC, including comprehensive documentation, sample program (frame) for Delphi and C++ and one man-day of remote consulting for support and assistance in program development.
