1 Extended Personnel Information - Overview

Possible fields of application

System Integration Service to manage additional personnel information, such as advanced trainings, work equipment and entries in the digital personnel file.

Implementation notes

The function package is used if:

- you would like to enter the employees' qualifications, advanced training or medical examinations in HYDRA
- you would like to document the dates of issue and return of work equipment or work clothes.
- you would like to keep a digital personnel file in HYDRA to save, for example, appraisal or absence interviews.

Integration

The employees need to be managed by the function package "integrated HR master" to be able use the "extended personnel information" function.

The included functions can be used **irrespective of** the used product groups (e.g. shop floor data collection, time & attendance, quality management).

Functions

- Categories
 - Maintenance of categories to control authorizations for the digital personnel file, work equipment management and the assignment of qualifications to employees.
- Planning of advanced training
 - Qualifications master and assignment of qualifications to employees with planning of advanced training sessions.
- Work equipment management
 - Issue and return of work equipment (tools, measuring tools, work clothes, keys, ...)
- Digital personnel file
 - Digital personnel file to store additional information, such as applications, appraisals, absence interviews, ...
- Storage of documents
 - Files can be stored in addition to the entries in the "digital personnel file", "work equipment management" and "assignment of qualifications".

2 Categories

Summary

HYDRA menu	System administration → System settings → Categories
FEDRA menu	Advanced Resource Planning → Maser data → Categories
Transaction code	catg
Function authorization	catg

The "categories" application has been designed to manage categories for different applications. The categories advanced training, instructions, driver's license, inspection, etc., for example, may be defined for the [qualifications](#). The categories are also used in the [digital personnel file](#) (e.g. application, appraisal, etc.) and the [work equipment management](#).

Field description

Category

Alphanumeric key for the category

Designation

Category name

Application

Transaction code for the application in which the category is to be used.

Responsibility area ("category" group)

The responsibility area which the category is assigned to. This responsibility area is checked when the category is edited but it does not affect using the category in other applications.

Responsibility area ("Authorization check for using the category" group)

The responsibility area entered here is checked if you want to show, create, change or delete a data record assigned to this category in another application. This authorization controls, for example, if a user in the [digital personnel file](#) is allowed to view, create, change or delete entries assigned to the "appraisal" category.

3 Qualifications

Overview

HYDRA menu	Master data → Staff → Qualifications
FEDRA menu	Advanced resource planning → Master data → Qualifications
Transaction code	qual
Function authorization	qual

Individual qualifications are defined using the related settings in the master data for qualifications:

The screenshot shows the 'Qualifications' application window. It has a 'Main page' and a 'Profile' tab. The 'Main page' contains a toolbar with icons for 'Request data', 'Cancel', 'Print preview', 'Print all', 'Insert', 'Copy', 'Edit', 'Delete', 'Save', and 'Help'. Below the toolbar is a 'Selection' section with a 'Qualification' dropdown and a 'Designation' text field. The main area is divided into two panes. The left pane, titled 'Qualifications', contains a table with columns: 'Qualification', 'Designation', 'Assign automatically', 'Order', and 'Responsibility Area'. The table lists several qualifications, including 'Engine driver', 'Machine operator', 'Assistant', 'Varnisher', 'Fork-lift driver', 'Filter', and 'Trucker'. The right pane, also titled 'Qualifications', shows the details for a selected qualification (100). It includes fields for 'Qualification' (100), 'Designation' (Engine driver), 'Color' (255, 0, 0), 'Assign automatically' (checked), 'Order' (1), and 'Responsibility Area'. At the bottom right, there is a 'Last editing' section with 'Modified by' (Miller) and 'Modified on' (10/30/2008 1:51:46 PM).

Qualification	Designation	Assign automatically	Order	Responsibility Area
100	Engine driver	☒	1	
200	Machine operator	☒	2	
210	Assistant	☒	5	
220	Varnisher	☒	1	
300	Fork-lift driver	☒	3	
400	Filter	☒	0	
500	Trucker	☒	0	

Field descriptions

Qualification

Unique qualification number. This number can be freely selected when creating a qualification.

Name/designation

Description of the qualification

Category

Category which this qualification belongs to. The category controls authorizations for viewing and editing qualifications within the application [Staff qualifications](#).

Color

Color highlighting the qualification in personnel assignment. This field is only available if the additional function "enhanced selection and visualization" is available.

The field "color" is only available if the license "enhanced selection and visualization" (PEP-ESV) is enabled (only applicable if HYDRA is used).

Relevant to workforce requirements planning

This field specifies whether the qualification is to be displayed and processed in workforce requirements planning.

Assign automatically

This option specifies if the qualification is considered in the automatic planning and only affects workforce requirements defined via the machine/operator relation of the operation or the production resources and tools.

Order

You can configure the order in which multiple qualifications for a workplace are displayed in the [Workplace Assignment](#).

Responsibility area

Responsibility area of the qualification

Validity period

Indicates how long the qualification will be valid (in days). If a value is entered in this field, the validity period will be assigned automatically starting from the current day until the end of the specified validity period, when an assignment is created for this qualification.

Max. validity period

Maximum validity of the qualification in days that is checked, when an assignment is created or edited. If the validity start date is not indicated it will automatically be set to "Today". If the validity end date is not entered, it will automatically be set to the validity start date + maximum validity period. If both fields are assigned values and the maximum validity period is exceeded, editing of a qualification will be canceled by issuing the error message "maximum validity period exceeded."

The fields "category", "relevant to workforce requirements planning", "validity period" and "max. validity period" are only available if the license "enhanced personnel information" (SIS-EPI) is enabled or PEP 8.2 is in use (only applicable if HYDRA is used).

4 Staff qualifications

Overview

HYDRA menu	Master data → Staff → Staff qualifications
FEDRA menu	Advanced Resource Planning → Master data → Staff qualifications
Transaction code	pequal
Function authorization	pequal

You can define the employees' qualifications in the *Staff qualifications* application:

Employees without qualification cannot be planned automatically in the [Workplace assignment](#) application.

Selection criteria

The application provides the following selection criteria:

Qualification

Enter a specific [qualification](#) to restrict the displayed assignments.

Category

Use this field to restrict the [category](#) assigned to the qualifications.

Validity ends ... to

Specifies when the qualification expires. If you use this option to restrict data, the application shows all assignments whose validity end date coincides with the selected period.

Advanced training planned

Specifies the date when a training is planned. Use this option, to identify all employees who are planned to participate in a training for a specific qualification and a specific date. As a result you get a "list of participants".

The selection criteria *Category*, *Validity ends ...to* and *Advanced training planned* are only available, if you enable the license *Extended personnel information (SIS-EPI)* or *version 8.2 of the Personnel Scheduling (PEP) module*.

Field descriptions

Person

The person's personnel number.

Qualification

Qualification number.

Ranking order

Ranking of the qualification. The system plans qualifications with higher ranking first during automatic planning. You can use the numbers ranging between 99 and 1 to define the ranking.

Valid from, to

The validity period for the assigned qualification.

Without date specification => unlimited validity

Valid from - until => *restricted to a date range*

Valid from => *Workforce requirements apply as of the specified date*

Valid until => *Workforce requirements apply until the specified date*

Evaluation

In this field, you can enter an evaluation/rating of the qualification for information purposes. The field is only available if the user has the function authorization *pequal* or *pequal.rating*.

If this field should not be displayed for specific users, you have to delete the function authorization *pequal* for these users. Then you have to add the required function authorizations *pequal.create*, *pequal.edit*, *pequal.delete* and *pequal.copy*.

Comment 1-3

Use these fields to add up to three comments for each assignment.

Advanced training planned

Date when a training is planned for this qualification.

Start time

Start time of the training.

Advanced training done

Check this field to document that the training has been completed.

The fields *Evaluation*, *Comment 1-3*, *Advanced training planned*, *Start time* and *Advanced training done* are only available, if you enable the license *Extended personnel information (SIS-EPI)* or *version 8.2 of the Personnel Scheduling (PEP) module*.

Toolbar

Add file

Opens a dialog to select a file. Once selected, the file is saved with a unique name in the [HYDRA path](#) "MOCHRIMG" on the server. The *File name* field shows the file name.

Show file

Shows any assigned file. Subject to the file extension, the application linked in the operating system displays the file.

Delete file

Deletes the assigned file. Once you have used this function, the file is no longer available on the server.

The buttons *Add file*, *Show file* and *Delete file* are only available, if you enable the license *Extended personnel information (SIS-EPI)* or *version 8.2 of the Personnel Scheduling (PEP) module* (only applicable if HYDRA is used).

5 Work Equipment Management

Overview

Menu	Master data → Staff → Work equipment management
Transaction code	weqi
Function authorization	weqi

Use the application *Work equipment management* to manage in HYDRA the work equipment that has been issued and returned:

Note: In the English version, the former label texts *Handing out* / *Handed out on/by* have been replaced with *Issued* and *Issued on/by* as of August 2019.

Available user fields		
Where?	Object type/user field key	Source (type)

Table	PNR/SYSTEM	HR master data (HR)
How to configure user fields?	Which user field types are available?	

Selection criteria

The application provides the following special selection criteria:

Currently valid, Valid in the future, Valid in the past

This selection specifies the time when the work equipment has been issued. Only the date is entered here when the work equipment has been issued or returned. The time is ignored.

Field descriptions

Person, Name

Personnel number and name of the person

Category

Assigns the entry to a [Category](#). Using categories, you can control the authorizations that specify the access to work equipment.

Designation (name)

Description of the work equipment

Inventory number

Inventory number of the work equipment

Serial number

Serial number of the work equipment

Manufacturer

Manufacturer of the work equipment

Model

Model of the work equipment

Size

Size, e.g. size or shoe size

Supplier

Supplier of the work equipment

Storage location

Storage location of the work equipment, if it is not lent out at the moment

Comment 1, comment 2, comment 3

3 comment fields to enter additional information

File

You can store a file for each entry included in the *Work equipment management*. Use the 3 buttons in the toolbar to add, show or delete the file. This field shows the unique file name used to store the file on the server. The name of files assigned to work equipment starts with "weqi".

Issued on*

When the data record is created, the system automatically preassigns the current date as the date when the work equipment has been issued. You can manually change the date. Use the function *Issued* in the toolbar to have the field populated with the current time.

Issued by*

The user name of the person that issues the equipment is automatically set if a personnel number is entered to change the date. The field cannot be changed manually.

Returned on

The return date and time can be entered manually. Use the function *Returned* in the toolbar to have this field populated with the current date.

Received by

User name of the person who received the work equipment. The user name is automatically set if the return time is changed. If the time of the return is set to empty, the person is deleted. The field cannot be changed manually.

Modified by, modified on

Person who last edited the data record including date and time.

Toolbar**Send e-mail**

Opens an e-mail addressed to the employee of the currently selected entry. If an e-mail address is entered for this employee in the *Company e-mail* field of the HR master, this address is used.

**Add file (function authorization weqi.edit)**

Opens a dialog to select a file. When the file is selected, the file is saved with a unique name in the [HYDRA path](#) "MOCHRIMG" on the server. The field *File* then shows the file name.

**Show file (function authorization weqi.edit)**

If a file is assigned, this file is shown. The file is displayed using the application that is linked in the operation system to the relevant file extension.

**Delete file (function authorization weqi.edit)**

This function deletes the assigned file. When you have called this function, the file does no longer exist on the server.

**Issued* (function authorization weqi.handout)**

Using this function, you can enter the current time in field *Issued on* and the logged on user in field *Issued by*. If the personnel number is not entered when the work equipment is issued, an error message is displayed and the booking is not carried out.

**Returned (function authorization weqi.return)**

Using this function, you can enter the current time in field *Returned on* and the logged on user in field *Received by*.

6 Digital Personnel File

Summary

Menu	Master data → Staff → Digital personnel file
Transaction code	pefi
Function authorization	pefi

The application "digital personnel file" allows for staff information to be stored in HYDRA in the form of a digital personnel file. Several categories with different access rights can be managed within the personnel file. A file may be stored for each entry in the digital personnel file:

Field descriptions

Person, Name

The person's personnel number and name

Date

The date to which this entry belongs.

Category

Assigns the entry to a [category](#). If categories are used, the authorizations for accessing entries can be controlled by responsibility areas.

Designation

Description of the entry

Comment 1, comment 2, comment 3

3 comment fields to enter additional information

File

A file may be stored for each entry in the digital personnel file. Three toolbar buttons allow for a file to be added, viewed or deleted. This field shows the unique file name under which the file has been stored on the server. The names of the files assigned to the "digital personnel file" start with "pefi".

Created by, created on

Editor and point in time when the entry was created

Modified by, modified on

Editor and point in time of the last modification

Toolbar

Send e-mail

Opens an e-mail addressed to the employee of the currently selected entry. If an e-mail address is entered for this employee in the "e-mail, company" field of the [HR master](#), this address will be used.

Add file

Opens a dialog to select a file. Once selected, the file is stored with a unique name within the [HYDRA path](#) "MOCHRIMG" on the server. The "file" field shows the file name.

Show file

Shows the files that might be assigned. Subject to the file extension, the file is opened and displayed by the application connected in the operating system.

Delete file

Deletes the assigned file. Once this function has been used, the file will no longer exist on the server.

* Note: In the English version, the former label texts *Handing out / Handed out on/by* have been replaced with *Issued* and *Issued on/by* from August 2019.
