

MDP II Online Seminar

Table of Contents

1.	MDP Seminar Examples	3
1.1.	Additions to Existing WinLine Grid, Window "Short Texts"	3
1.1.1.	Add New Column to Existing Window Grid with Combo Box Control	3
1.1.2.	Export Grid Contents to MS Excel	4
1.2.	Modifications to Existing WinLine Grid in "Voucher Entry"	6
1.2.1.	Add New Column to Existing Tables T025 and T026	6
1.2.2.	Set up new FAKT Windows 245, 249, 248 in CWLCTK	7
1.2.3.	Set up CTK window scripts: FAKT245 and FAKT248	8

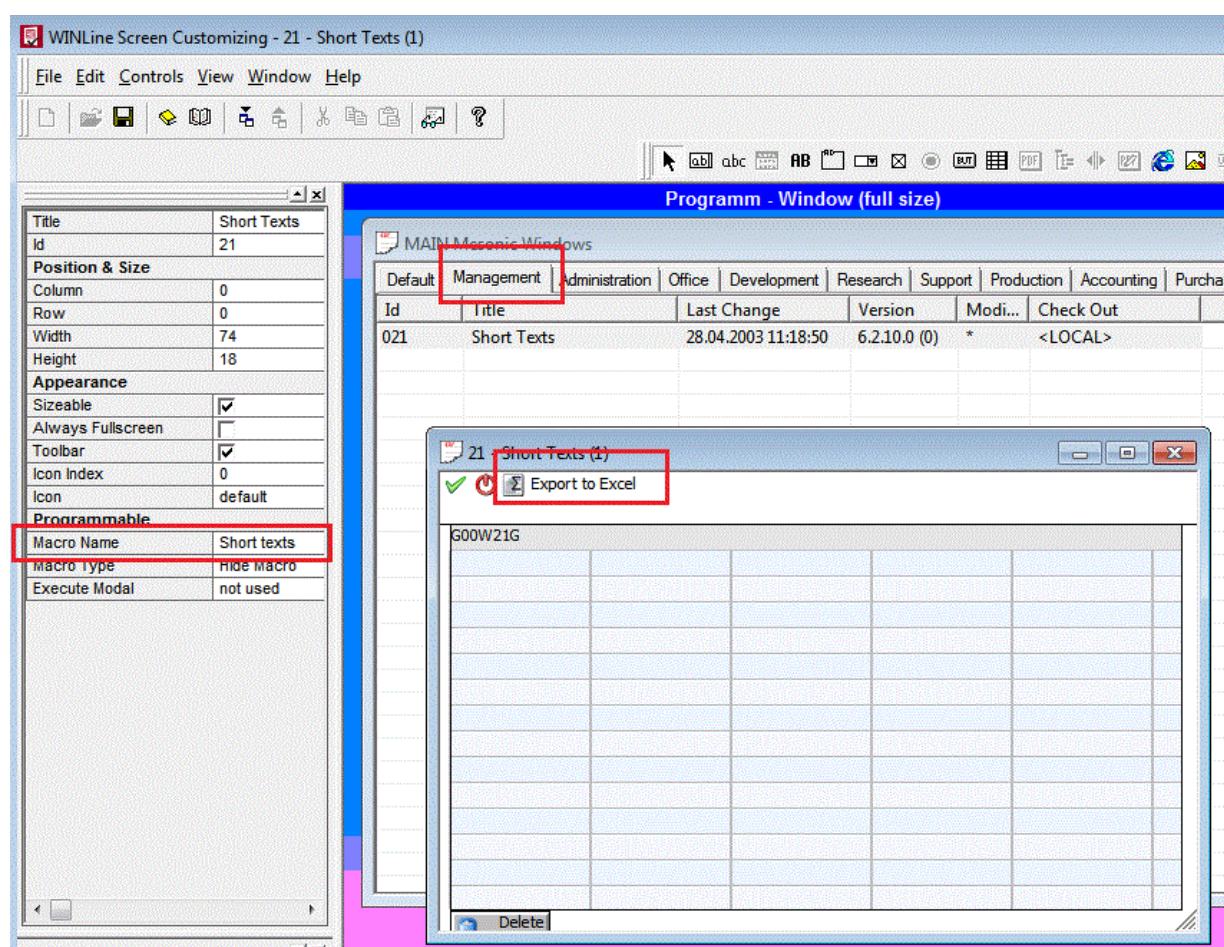

1. MDP Seminar Examples

The ten examples that are demonstrated in the MDP seminar are documented in full in this document. All required window, menu and report settings and corresponding CTK window scripts are listed from the online seminar.

1.1. Additions to Existing WinLine Grid, Window "Short Texts"

1.1.1. Add New Column to Existing Window Grid with Combo Box Control

First, window MAIN021 is copied to user group Management in CWLCTK. The Macro Events checkbox is set for the grid control, element ID 100. In addition, a new button control is inserted in the window named "Export to EXCEL". Assign button icon "IDSUMMEN" to the button as icon.

The CTK window script "Short texts" is attached to the window in the Macro Name field.

As documented, new grid columns are added to a grid control in the CTK window script. This is the next step in adding the new grid column.

Add new column to grid control, element ID 100

A new OnScriptStart event handler is now entered for object CWLScript in CTK window script "Short Texts" in WinLine START:

```
Sub CWLScript_OnScriptStart()
    Dim row, column

    Set myGrid = CWLCurrentWindow.ActiveWindow.Controls.Item(100).Grid

    myGrid.isRedraw = 0

    CWLCurrentWindow.ActiveWindow.Vars.CreateVar 495, 0, "1", 1, "1"
    myColumnNumber = myGrid.AddColumn ("My Column", "T31,Z1,L30,H3,mycombo","I", "V", 0, 495,
0, 20)
    myGrid.MoveColumn myColumnNumber,1

    combostring = "0"&chr(9)&"Option 0"&chr(13)&chr(10)
    combostring = combostring & "1"&chr(9)&"Option 1"&chr(13)&chr(10)
    combostring = combostring & "2"&chr(9)&"Option 2"&chr(13)&chr(10)
    myGrid.SetComboStrings myColumnNumber, combostring

    myGrid.SetColumnColor myColumnNumber, RGB(177, 200, 233)
    myGrid.isRedraw = 1

    myGrid.SetCurrentCell 1, myColumnNumber

End Sub
```

The new column is inserted in grid element ID 100 in the script, the combo box control is inserted in the column and the combo box is populated with three selection options. The column is colored in blue and lastly the new column is moved to a position as first column in the screen display of the grid.

Next a new OnGridCheckUserColumn event handler is inserted in the script for object CWLCurrentWindow to check on the selection the user has made in the combo box:

```
Sub CWLCurrentWindow_OnGridCheckUserColumn(nFgId, nRow, nColumn, bResult)

    If nFgId = 100 Then
        Set myGrid = CWLCurrentWindow.ActiveWindow.Controls.Item(100).Grid
        General.MsgBox "The following values are selected: " & myGrid.Contents
    End If
End Sub
```

1.1.2. Export Grid Contents to MS Excel

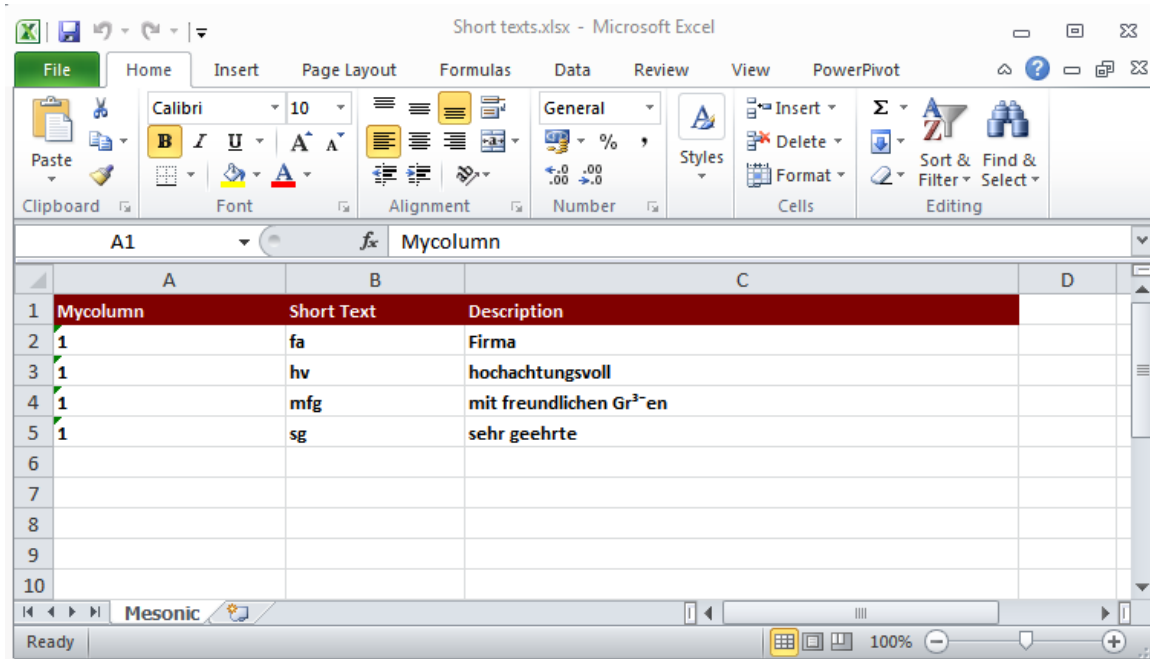

Lastly, the script is extended to export the grid contents to MS Excel. A new OnPushButton event handler for object CWLCurrentWindow is inserted in CTK window script "Short Texts", which is fired when button "Export to Excel" is clicked on in the window.

```
Sub CWLCurrentWindow_OnPushButton(nFgId, bResult)

    If nFgId = 800 Then
        Set myGrid = CWLCurrentWindow.ActiveWindow.Controls.Item(100).Grid
        myGrid.ExportasXLS CWLStart.WorkPath & "Short texts.xlsx"
    End If
End Sub
```

End Sub

When the button pressed in the window, the grid contents are exported to the WinLine installation folder and can be opened in MS EXCEL.

The screenshot shows a Microsoft Excel window titled "Short texts.xlsx - Microsoft Excel". The ribbon is set to "Home" with the "Font" group selected. The spreadsheet has four columns: A, B, C, and D. Column A is labeled "Mycolumn", B is "Short Text", and C is "Description". The data is as follows:

	A	B	C	D
1	Mycolumn	Short Text	Description	
2	1	fa	Firma	
3	1	hv	hochachtungsvoll	
4	1	mfg	mit freundlichen Gr ³ -en	
5	1	sg	sehr geehrte	
6				
7				
8				
9				
10				

The status bar at the bottom shows "Ready", "Mesonic", and "100%".

1.2. Modifications to Existing WinLine Grid in "Voucher Entry"

1.2.1. Add New Column to Existing Tables T025 and T026

First, a new column, "Packingnumber" (Type: "1 String, length 50 characters") is added in the Append Tables window in WinLine Admin to T025 in the WinLine database (order file header table).

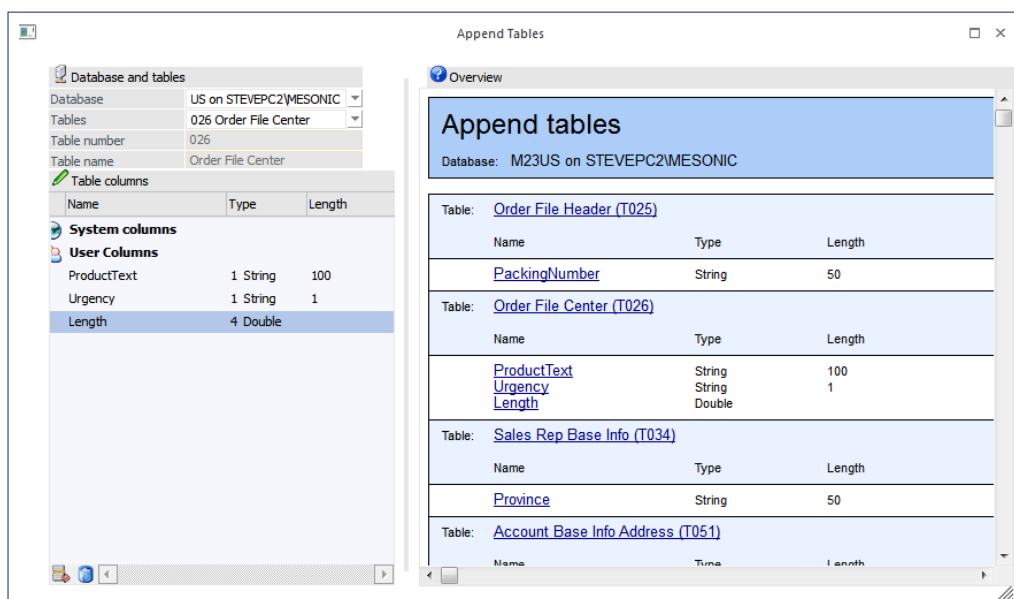

Then add three new columns to T026 in the WinLine database (order file center table):

ProductText: Type "1 String", Length 100

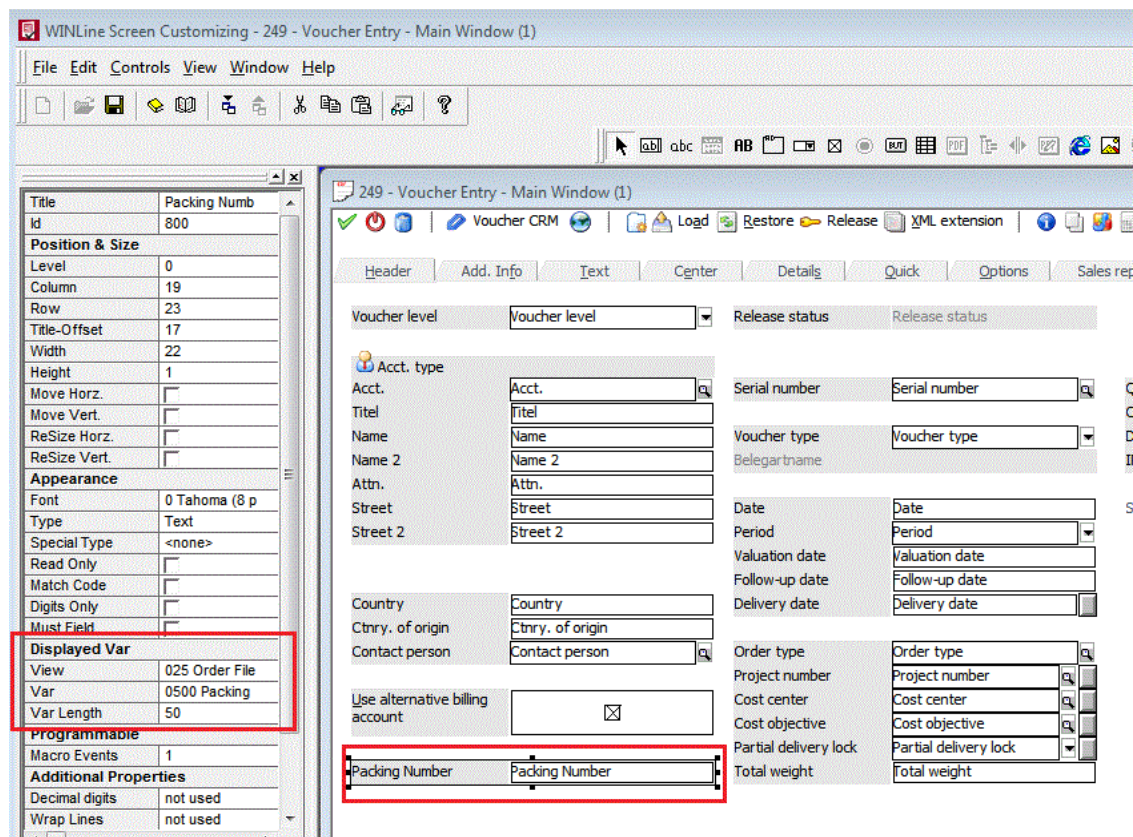

Urgency: Type "1 String", Length 1

Length: Type "4"

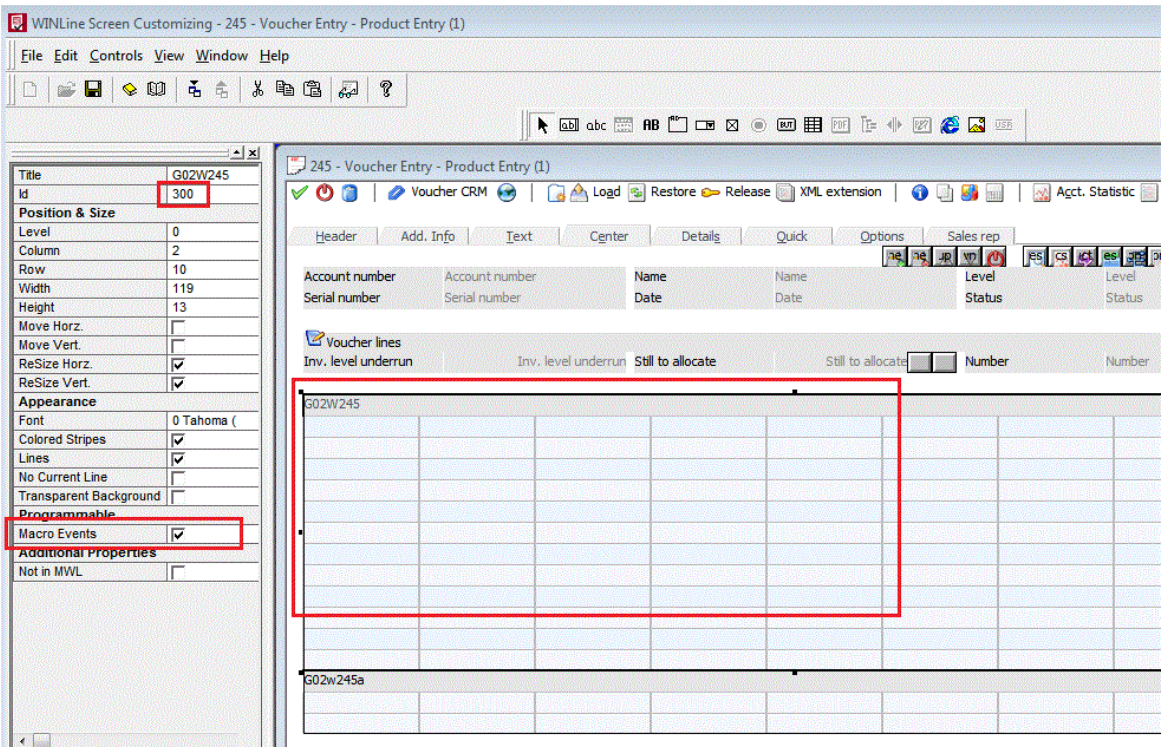

1.2.2. Set up new FAKT Windows 245, 249, 248 in CWLCTK

For this example, three windows from module FAKT are copied to user group Management. First, window FAKT249 (Voucher Entry Main Window) is copied to user group Management in CWLCTK. A new entry field "Packing Number" is inserted into the window.

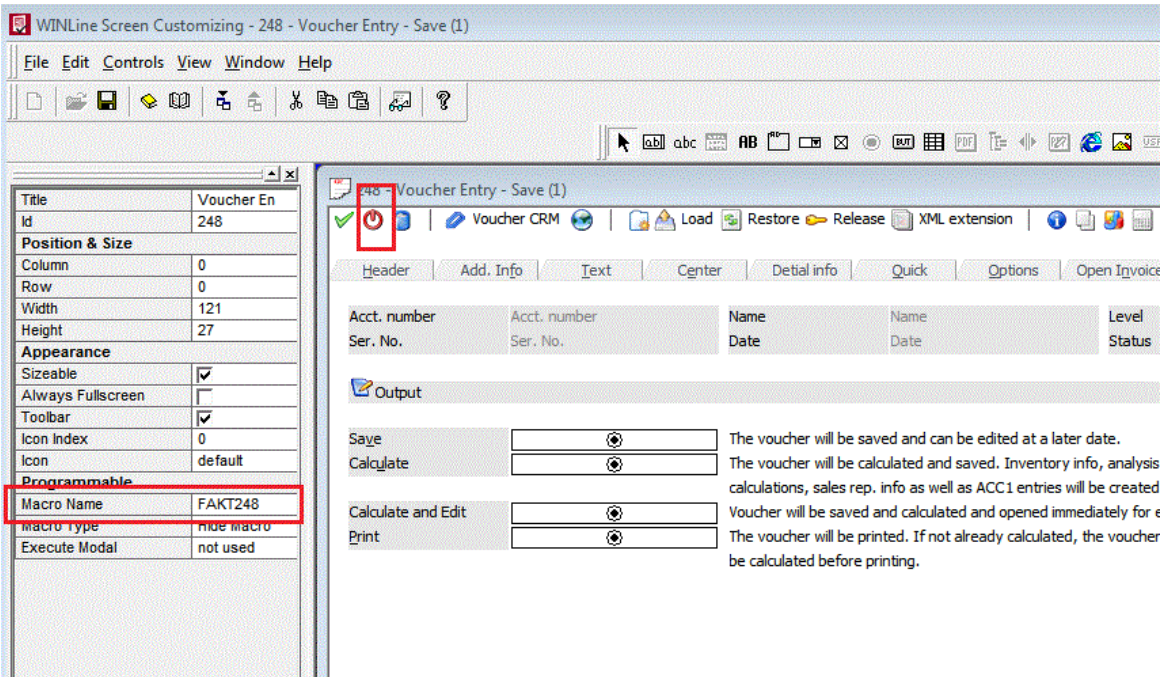

The edit field control is connected to the new table column with window variable 025/0500.

Secondly, window FAKT245 is copied to user group Management. The "Macro Events" checkbox is set for existing grid control ID 300 – G02W245) and CTK window script FAKT245 is attached to the window:

Lastly, window FAKT248 (Voucher Entry-Save) is copied to user group Management. CTK window script "FAKT248" is assigned to the window and the "Macro Events" checkbox is activated for the EXIT button, control ID 99.

1.2.3. Set up CTK window scripts: FAKT245 and FAKT248

The CTK window scripts for windows FAKT245 and FAKT 248 will now be set up in WinLine START.

First, an OnWindowOpen event handler is inserted in script FAKT245 for the CWLSTART object:

```
Sub CWLStart_OnWindowOpen(AppNr, WindowId)

    If WindowId = 245 Then

        Set MyGrid = Cwlcurentwindow.ActiveWindow.Controls.Item(300).Grid

        MyGrid.Isredraw = 0
        'Insert Producttext column in grid
        Mycolumnnumber = Mygrid.AddColumn("Producttext", "T1,Z100,H1", "I", "V", 0, 26, 500, 20)
        'Insert grid column with Combobox Urgency
        Mycolumnnumber = Mygrid.AddColumn("Urgency", "T31,Z1,L20,H5", "I", "V", 0, 26, 501, 10)
        Combostring = "0"&Chr(9)&"no selection"&Chr(13)&Chr(10)
        Combostring = Combostring & "1"&Chr(9)&"low"&Chr(13)&Chr(10)
        Combostring = Combostring & "2"&Chr(9)&"medium"&Chr(13)&Chr(10)
        Combostring = Combostring & "3"&Chr(9)&"high"&Chr(13)&Chr(10)
        Combostring = Combostring & "9"&Chr(9)&"extreme"&Chr(13)&Chr(10)

        MyGrid.Setcombostrings Mycolumnnumber, Combostring

        'Insert grid column Length
        Mycolumnnumber = Mygrid.AddColumn ("Length", "T4,Z14,H1,I2", "r", "V", 0, 26, 502, 10)
        MyGrid.Isredraw = 1

    End If

End Sub
```

Note:

Parameter values for the AddColumn method are case-sensitive!

The new voucher header and voucher center grid columns can now be tested with a user in user group Management. The respective voucher preview form is now modified to print out the four fields to test whether the data is being correctly saved.

In the illustration above, the voucher preview form P02V42PV has been modified to print the packing number in the form header section, and the three new voucher center grid fields have been included with Flag N in the form middle section.

Secondly, an OnPushButton event handler is inserted in script FAKT248 for the CWLCurrentWindow object:

```
Sub CWLCurrentWindow_OnPushButton(nFgId, bResult)
```

```
    If nFgId = 99 Then
        CWLStart.CurrentWindow.Vars.Value(25,500) = ""
    End If
```

```
End Sub
```

This script empties the window variable 25,500 (Packing Number) so that the field is empty in the Voucher Header window after the EXIT button is pressed in the "Voucher Entry – Save" window.
