

1 Order-Related Statistics

Overview

A detailed report about orders is found in the form of the order statistics. There is the option to obtain a graphic report showing quantities and time for selected orders.

Integration

Depending on the selection in the selection panel, all orders are shown line-by-line in the order-related statistics. The data shown here are both order backlog data as well as an order's current status information.

Selection criteria

This application does not have the option to limit by order status. What this means is that even such orders are selected that have not yet begun if they match the selection criteria.

The application provides the following selection criteria:

Order

Here the order number can be entered directly.

Final product

This selection criterion refers to the article in the order header. All orders with the selected article are displayed. You can also run a search using wildcards.

Designation

This selection criterion refers to the article designation in the order header (finished article designation). All orders with the selected article designation are displayed. You can also run a search using wildcards.

Basic date start from/ to

This selection criterion relates to the basic date start defined in the order header. Only orders are displayed that are scheduled on or between the selected basic date start.

Please note: these fields are not predefined.

Basic date end from/ to

This selection criterion relates to the basic date end defined in the order header. Only orders are displayed that are scheduled on or between the selected basic date end.

Please note: these fields are not predefined.

Order-related statistics

The following fields are displayed in the table:

(no designation), order status

The status of the entire production order is shown via the order status. Possible states include:

(Gray) - prepared: the order has not yet been started

(Light green) - started: the order has already started

(Green) - ready: the order is finished

(Purple) - orders on hold are set with the status not free, because they are not actively logged on.

Order

Order number of the order.

Please note: By default, the list is sorted based on this field.

Final product

Article number of the operation.

Article designation

Name of the article.

Number of OPs

Number of operations for the order displayed.

Target quantity

The yield planned for this order.

Yield

The yield posted to this order.

Scrap

The scrap posted for all of the order's operations.

Unit

Order's unit of quantity.

Target setup time

Sum total of the target setup times of all of the order's operations.

Setup time

Sum total of the times for all of the order's operations posted to the resource performance account 7 (SET).

Processing time

Sum total of the times for all of the order's operations posted to the resource performance account 11 (MUT).

Standstill period

Sum total of the times for all of the order's operations posted to the resource performance accounts 1-6, 8, 9 and 10.

Actual labor utilization

Sum total of time and labor data for all of the order's operations posted as labor utilization.

Graphic order-related statistics

In addition to the reporting the data in table form, the statistics can also be displayed in the form of a graphic. After selecting an order, the selection option "Order-related statistics - graphic" will appear in the detailed reports frame. The graphic is divided into the categories quantities, duration and resource performance accounts distribution.

Graphic quantities section

The graphic shows a comparison between yield and scrap

Graphic durations section

The graphic presentation of the durations compares order durations (always 100%), production duration and downtimes for the selected order combined as a ratio in percent.

Graphic RPA distribution section

Compared in the graphic presentation of the RPA distribution are the times posted to the resource performance accounts 1-6, 8, 9, 10 and 12 as a ratio in percent.
