

1 Machine History

Overview

The application makes it easier to follow up on and track MES events at a workplace that are relevant to a posting. For this purpose, the posting events recorded at a workplace such as status changes, order and personnel postings, are listed in table form and shown in chronological order.

Selection criteria

The application provides the following selection criteria:

Workplace from ... to ...

This selection criterion references the workplace in the machine or workplace master data. You can also run a search using wildcards (placeholders *).

Group from ... to ...

This selection criterion references the group in the machine or workplace master data. All machines or workplaces are displayed that are assigned to the selected group. You can also run a search using wildcards.

Short designation

This selection criterion references the short name of the machines that are defined in the master data. All of the machines or workplaces are displayed that match the string that was entered. You can also run a search using wildcards.

Report group

This selection criterion references the report groups. All machines or workplaces are displayed that are assigned to the selected report group. You cannot run a search using wildcards.

Cost center

This selection criterion references the cost center defined in the machine or workplace master data. All machines or workplaces are displayed that are assigned to the selected cost center. You can also run a search using wildcards.

Date from ... to (shift/ time)

The period for the data to be evaluated can be limited via the date selection option.

If a selection is made via a shift (shifts), the shift date is evaluated. If no shift has been selected, all shifts are considered. Please keep in mind that a selection by shift is only supported for order and machine data, not for resources data.

For the selection by time, you select the start date. The two times each refer to the start or to the end of the date periods listed above.

It is only possible to evaluate workplaces configured as a "group work place" if the selection is made by time; nothing is displayed if the selection is made by "shift", because there is no shift reference for group workplaces.

Machine history detail applications

The machine history lists all events, such as status changes, order or personnel postings, for a machine that occurred on the day being evaluated or in a shift on this day. The following symbols are displayed in the "Type" field in the reports:

Machine/ workplace related postings

Automatically recorded (for a direct machine connection) machine status or one assigned manually at the terminal, production block settings, modified machine/ workplace-related default values (target cycle, partitioning) at the terminal and/or automatically set operation postings. If a staff badge number was recorded for a posting, the person is displayed. No order-related data are displayed for machine-related postings

Order-related postings

Postings performed automatically (with change of shifts) or manually (logon, logoff, interruption) at the terminal. In addition, the corresponding order is displayed. If the posting is one that was entered manually, the person is shown who performed the posting.

When waiting period processing is applied, the order logon time displayed illustrates the recording time and may deviate from the time in the order log record.

→

→

→ Personal postings

Postings performed automatically (with change of shifts) or manual personnel logons or logoffs at the terminal. In addition, the corresponding personnel number is displayed as well as the operation at which the person is working.

Field description

Below find a description of the available data:

Date

Date and time of the event as a recording time

Type

Image presentation belonging to the type as described above.

Type

Assignment of the recorded events. Possible values:

- Machine status
- Production lock
- Operation postings
- Personnel postings
- Default value changes

Event

Specifies the event recorded at the machine that is listed in the line of the table.

Type	Event
Machine status	Machine status corresponding to the configuration
Production lock	P.LOCK SET MANUALLY P.LOCK CANCELED MANUALLY
Operation postings	OP LOGGED ON OP INTERRUPTED OP LOGGED OFF
Personnel postings	PERSON LOGGED ON PERSON LOGGED OFF
Default value changes	CHANGE PARTITIONING/ CHANGE TARGET CYCLE

Order

Order number of the posted operation (only for operation postings)

Article

Article number of the posted operation (only for operation postings)

Person

Personnel number of the person that was logged on or off (only for personnel postings)

Last name

Name of the person that was logged on or off (only for personnel postings)

First name

First name of the person that was logged on or off (only for personnel postings)

Workplace

Workplace that the event relates to.

Short name

Short name of the workplace

Group

Group that the machine is assigned to.

Cost center

Cost center of the workplace

Status

Status number of the assigned status (only for machine status).

Status designation

Status text of the assigned status (only for machine status).
