

1 Workplaces/ Machines

Overview

The workplaces/ machines application, also referred to below as workplace overview, is geared towards users in the production preparation and production monitoring department, who would like to have an overview of the production situation at specific workplaces/ machines or an entire unit in an organization.

Integration

The workplace overview provides a glance at all information relevant to the workplace. Not only does it make master data available, but also a variety of data required to control production. Among these are:

- Current status of the workplace/ machine.
- Operation currently running (logged on) at the workplace/ the machine
- Target/ actual comparison of cycles and number of strokes.
-

Selection criteria

The application provides the following selection criteria:

Workplace from ... to ...

This selection criterion references the workplace in the workplace/ resource configuration. You can also run a search using wildcards (placeholders *).

Short name

This selection criterion references the short name of the workplace/ the machine as defined in the configuration. You can also run a search using wildcards.

Group from ... to ...

This selection criterion refers to the group defined in the workplace/ resource configuration. All machines or workplaces are displayed that are assigned to the selected group. You can also run a search using wildcards.

Report group

This selection criterion references the report groups. All machines or workplaces are displayed that are assigned to the selected report group. You cannot run a search using wildcards.

Cost center

This selection criterion refers to the cost center defined in the workplace/ resource configuration. You can also run a search using wildcards.

Workplace overview detail application

Shown in this detail application are all workplaces displayed depending on the selections made in the selection panel. Shown are the current status, workplace information, shift quantities, cycles and number of cycles. Below find a description of the available data: By clicking on the underlined field captions, you have the ability to sort the selected field in ascending or in descending order.

Status

The different states are combined under "status" and are shown in the form of an "LED". The following color code applies:

 LIGHT GREEN	Status with RPA 11 (typically "Production")
 BLUE	Status with RPA 7 (typically "Set up")
 RED	Status 30000 (typically "Not assigned")
GRAY	Status 20000 or status with RPA 12 (typically "Break/ no shift")
 YELLOW	All other states

Workplace

Unique ID of the workplace as per configuration.

Short name

Name of the workplace as per configuration.

Group

Group as per configuration that the workplace is assigned to.

Status designation

Status designation of the status currently active at the workplace.

Status since

Point in time (date, time) when the status was assigned.

Duration so far

Duration so far of the status currently active at the workplace.

Yield (P)

Yield that has been posted so far at the workplace in the current shift.

Scrap (P)

Scrap that has been posted so far at the workplace in the current shift.

Target cycle

Current target cycle at the workplace in seconds per cycle.

If an operation is logged on at the workplace/ at the machine, the target cycle per cycle is displayed at the operation in seconds. There is no target cycle for machines at which currently no operation is logged on. In this case, the target cycle is shown as 0.

Actual cycle

Current actual cycle at the workplace in seconds per cycle.

$$Actualcycle = \frac{machines_status.th.units}{1000.0} \text{ Difference (\%)}$$

The difference is calculated in % using the following formula: (Target cycle - actual cycle) / target cycle * 100%

Target number of cycles

1 / Target cycle

There is no target cycle for machines at which currently no operation is logged on. Therefore, the target number of strokes is shown as 0.

Actual number of cycles

1 / actual cycle

Difference (%)

(Target number of cycles - actual number of cycles) / target number of strokes * 100%

Article

Article number of the operation currently being produced at the workplace.

MES order number

The operation's combined order/ operation number.

OP designation

Designation of the operation

Tool

The tool defined at the operation

Color

The color defined at the operation
