

1 Workflow - Supplier Complaint

1.1 Usage

This is the description of the standard workflow process to be used for processing supplier complaints.

The workflow is administered under the name `HYDRA_complaint_customer`.

A workflow based on the process described here is instantiated when a complaint of the type "supplier complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of supplier complaints.

1.2 Process

1.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on the basis of the responsible person defined in the associated complaint at that time.

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

1.2.2 Process Step "Entry and/or completion of complaint data"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have complaint data been entered?".

1.2.3 Process Step "Notification of supplier"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". At the top, there are icons for a document, a green checkmark, and a red X. Below the title bar is a "Main page" tab. On the left, there are labels for "Task details" and "Commentary". The "Task details" field contains the text "Information of the supplier". The "Commentary" field contains the text "Please inform the supplier and ask for a statement." At the bottom, there is a checkbox labeled "Supplier has been informed" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Supplier has been informed".

1.2.4 Process Step "Waiting for statement"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows the same "Edit task" window. The "Task details" field now contains "Wait for statement". The "Commentary" field contains "Please wait until the supplier's statement has been received. Once you have received the statement, decide whether or not you accept it." At the bottom, there are two checkboxes: "Statement ok?" which is checked, and "Statement received?" which is unchecked.

In accordance with the status of the "Statement o.k.?" checkbox, it is decided at the time of task completion whether the statement of the supplier is to be opposed and a new statement requested, or whether there is a ramification for determining the complaint finding.

The workflow is not continued until completion of this task has been documented by activating the "Statement received" checkbox.

1.2.5 Ramification "Statement o.k.?"

In accordance with the selection in the "Statement O.K.?" checkbox in the previous process step, the statement of the supplier is either opposed or verification of all data concerning complaint handling follows.

1.2.6 Process Step "Oppose statement"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the value "Complain about statement". The "Commentary" section contains a text area with the text "Please object to the supplier's statement and ask for a new or corrected statement." Below these sections is a checkbox labeled "Statement rejected?" which is currently unchecked.

The workflow is finished when completion of this task has been documented by activating the "Statement opposed?" checkbox.

1.2.7 Process Step "Determination of finding and completion"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the value "Define result and complete complaint". The "Commentary" section contains a text area with the text "Please verify that all input data (costs, measures, etc.) are complete and close the complaint if all data are complete. Inform the customer of this status change." Below these sections is a checkbox labeled "Has the complaint been completed?" which is currently unchecked.

The workflow is finished when completion of this task has been documented by activating the checkbox "Has the complaint been completed?".

1.2.8 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

1.3 Integration

Upon creation of a supplier complaint, an active entry of the object type `WFM_CONFIG` with parameter `Complaint_ComplaintType_LIEFERANT` is searched in the advanced object configuration of HYDRA.

The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaint_supplier`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters can be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Content
Module	COMPLAINT
Designation	Workflow for complaint
Process alias name	Complaint_ComplaintType_LIEFERANT
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of supplier complaint
ID 2	Empty
ID 3	Empty
ID 4	Empty

ID 5	Empty
Key 1	Data type of supplier complaint (default: REK)
Key 2	Area of supplier complaint
Key 3	Empty
Key 4	Empty
Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of customer complaint>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber` and `var_HYDRA_reknr` may be used to generate the reference to the associated supplier complaint directly.
