

1 Standard Label

Usage

You use the standard label as a part of Material and Production Logistics and also in Tracking & Tracing in order to be able to label WIP material in particular, so that it can be identified later.

Integration

The following posting events trigger a label to be printed:

- Output batch change
- OP interruption
- OP logoff

Features

The label includes the following information resulting from the movement data or from the entry process.

Value	Comment
Date/ time	Date/ time of the day of the posting
Order number	Order number of the order producing the material
Operation number	Operation number of the order producing the material
Workplace	Workplace at which the order/ operation was logged on and where the posting was made
Article	Article number (of the order producing the material)
Designation	Article designation (of the order producing the material)
Quantity	Quantity of the material produced
Batch number	Batch number of the material produced
