

1 Additional Allowances Rule

Overview

Menu	Master data → Labor time → Add. allowances rule
Transaction code	atbo
Function authorization	atbo

You can use the application *Additional allowances rule* to assign an additional bonus (e.g. attendance bonus) if employees work on specific days. You can also assign fixed allowances for travel and subsistence expenses. A wage type triggers the respective posting. If this wage type (initial wage type) is used, the system posts a time bonus for the so-called presence wage type. The initial wage type can be deleted after settlement. To calculate the presence wage type, the time posted for the initial wage type is used.

The screenshot displays the 'Add. allowances rule' application window. The main area contains a table with the following data:

Initial wage type	Designation	Refer...	Duration	Percentage	Delete	Presence wage type	Designation	Duration
200	Extra work	Duration	1:30			528	Extr.wrk. Prem.	1:00
100	Basic wage	Duration	0:00			526	Travel expenses	1:00

The right-hand pane shows configuration options for the 'Initial wage type' (Wage type 200, Duration 1:30, Reference Target time, Normal time) and the 'Presence wage type' (Wage type 528, Duration 1:00, Alignment To, Point in time Beginning of initial wage type). The bottom section shows validity and last editing information.

Field descriptions

Initial wage type

When the specified wage type is posted, the system creates the presence wage type. You can create several rules for one initial wage type. In this case, only the additional allowance rule with the highest value in field *Duration* is processed for this initial wage type.

Reference

You can define additional allowances rules with reference to the duration or to a percentage of the target or the normal time.

Duration / Percentage

Total time that must be posted at least for the initial wage type on the settlement day. Only if this minimum is reached, the posting for the presence wage type is performed.

You can define the required total time as absolute duration or as a percentage of the target or normal time.

Delete

All postings of the initial wage type are deleted when the rule has been performed and are no longer available.

Presence wage type

Wage type used to post the time bonus of field *Duration*.

Duration

Time posted for the presence wage type. The entry has the format hours:minutes.

Alignment

Before:

The posting of the presence allowance ends at the specified time.

To:

The posting of the presence allowance starts at the specified time.

Point in time

Time when the posting of the presence wage type is performed

Midnight:

The posting is performed at 0:00 hours.

Beginning:

The posting is performed at the start of the first posting of the initial wage type.

End:

The posting is performed at the end of the last posting of the initial wage type.

Authorization required

The posting for the presence wage type requires authorization.

Company

Restricts the additional allowance rule to a particular company. If no company is entered, the additional allowance rule is active for all companies.

Valid from, to

Validity period of the additional allowances rule. If both fields are empty, the validity of the additional allowance rule is unlimited.

Personnel selection

This field is used to further narrow down the range of validity of a rule. You can select the following fields of the HR master data: area, cost center, department, personnel number, employee subgroup, activity and employment relationship (salaried/non-salaried employee). If you have selected a criterion, a further field is displayed where you can enter the relevant value.

The field *Personnel selection* is only available if the extension [AddAllowRuPersonnelSelection](#) is activated.
