

1 Bradford Factor

Overview

Menu	Role menu: HR -> Evaluations -> Bradford Factor Product menu: PZW → Personnel Time Management → Evaluations → Bradford Factor
Transaction code	brad
Function authorization	brad

The Bradford Factor is a KPI deriving from the Health Management. It provides information on the type of absenteeism of an employee and can be used as a "warning factor". Employees with frequent (often short) absenteeism achieve a higher score. However, a high Bradford factor does not necessarily imply a mental overload and should only serve as a point of contact with the affected employee.

Purpose

This report provides the user with an overview of all persons and their respective Bradford factor within the selected time period. A high Bradford factor provides the user with an indication of an accumulation of short-term, illness-related absenteeism.

Calculation

Calculation basis for the determination of the Bradford factor are the absences from the person in the selected period as stated in the absence planning. The calculation includes all absenteeism associated with the absence control, namely *illness category with pay continuation*, *sick without pay continuation*, *unpaid illness*, *work injury and rehab*.

The values of the Bradford factor column are colored according to the following classification:

1 to 200 → green

201 to 449 → yellow

>= 450 → red

In case of absences, which continue over the weekend, the weekend is also included in the missing days. Thus, the calendar days are always considered, not the working days.

In the case of absence planning, which only takes place partially in the selected period, simply the missing days are evaluated that are within the selected period. The number is given as 1.

If there is no missing time for the calculation in the selected period, the value is not 0, but no value is issued.

Configuration

By means of an INI configuration, it is possible to specify which of the above-mentioned categories from the *Control of absence* are included in the calculation.

INI name: BRADFORD

Section: ABSENCES

Key: CATEGORIES

Value: Abbreviation of the category, separated by comma (example: URL,URH,SUR)

Abbreviation	Category
URL	Holiday leave
URH	Half-day leave
URU	Unpaid leave
SUR	Special leave
LFZ	Illness with continued pay
OLF	Illness without continued pay
UBK	Unpaid sickness
UNF	Accident at work
KUR	Rehab
MUT	Maternity leave
FST	Leave of absence
WBD	Further training
GLZ	Flextime reduction
FZA	Overtime reduction
FLX	Time account reduction
FTG	Public holiday
BZS	Other paid leave
UBS	Other unpaid leave

Selection criteria

Personnel selection

You can find the description of the selection criteria in the documentation [Extended personnel selection](#).

Period from / until

Period of time considered for the evaluation. The field *period from* is pre-assigned for one year by today's date, the field *period up to* is pre-assigned with the current date. That means, if the user requests data, then all the data records of the last year are shown.

Field description for the category *Absence*

Quantity

Number of absences

Days of absence

Total of absence days

Bradford Factor

Bradford Factor The calculation is performed using $[\text{Number of absences}]^2 \times [\text{Absence calendar days}]$
