

1 Mass Entry of Clocking Records

Summary

Menu	Human Resources Management → Maintenance → Mass Entry of Clockings
Transaction code	clme
Function authorization	clme

The mass entry function allows for a clocking to be created for a selection of several people at the same time.

Selection Criteria

The application provides the following selection criteria:

Status

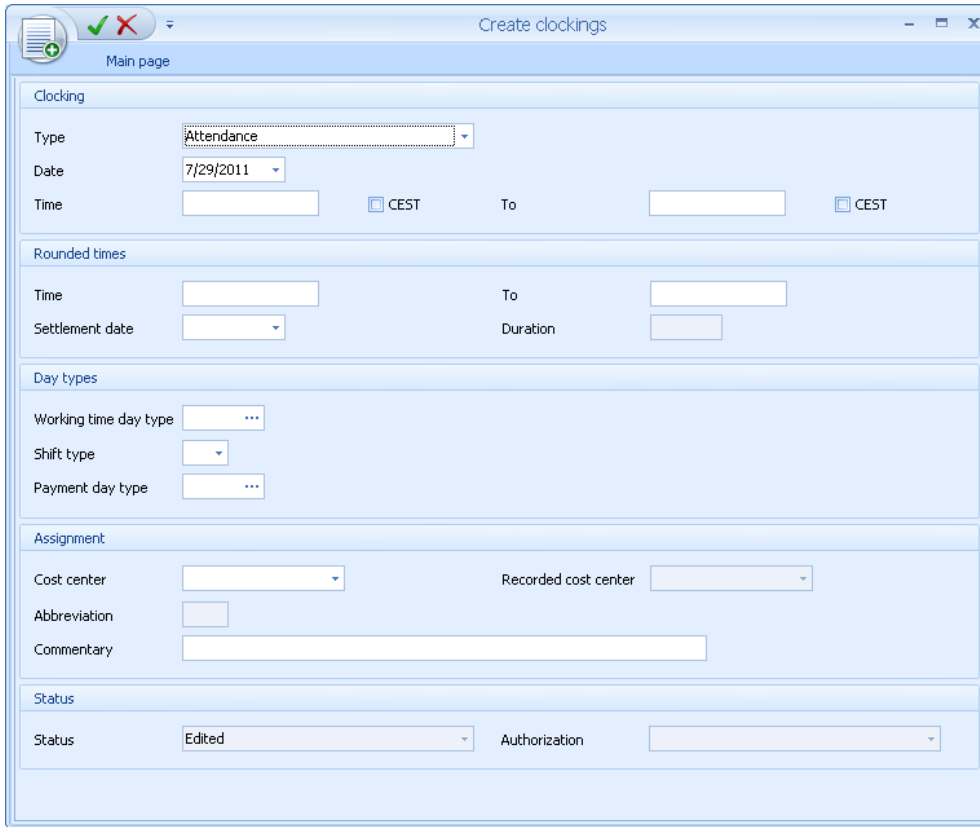

These checkboxes specify whether present people, people who are absent (planned or unplanned) or who have a day off are to be displayed or not.

Editing Functions

Create clockings

A clocking record may now be entered for all people selected in the attendance overview list.

The screenshot shows the 'Create clockings' dialog box. The 'Main page' tab is active. The 'Clocking' section includes a 'Type' dropdown set to 'Attendance', a 'Date' dropdown set to '7/29/2011', a 'Time' input field, and two 'CEST' checkboxes. The 'Rounded times' section includes 'Time' and 'To' input fields, a 'Settlement date' dropdown, and a 'Duration' input field. The 'Day types' section includes 'Working time day type', 'Shift type', and 'Payment day type' dropdowns. The 'Assignment' section includes 'Cost center' and 'Recorded cost center' dropdowns, an 'Abbreviation' input field, and a 'Commentary' text area. The 'Status' section includes a 'Status' dropdown set to 'Edited' and an 'Authorization' dropdown.

The meaning of the input fields corresponds to that when a clocking is created in the [editing the labor time](#) dialog.

The entered clocking record is created for all **selected** persons. The shortcut <Ctrl>-<A> can be used to select all persons, once the table has got the focus e.g. by clicking with the mouse on a person.
