

1 Edit Production Resources and Tools of the Order

Summary

Menu	Order management → Order management → Edit production resources and tools of the order
Transaction code	edorres
Function authorization	edorres

Utilization

This application allows for resources to be defined for orders.

Prerequisite

The relevant order has to be created.

Selection criteria

The following selection criteria are available in the application:

Order

The resources assigned to an order may be selected by entering an order.

Field descriptions

Order

The order number to which the production resources and tools are to be assigned can be entered in this field.

Resource type

Resource type of the production resource and tool that is to be assigned to the operation. The resource type has to be known in the system. Predefined resource types can be selected using the selection list. Further resource types can be created as a part of customizing HYDRA. DOC is to be entered as the resource type for documents.

Resource

Enter the resource number (material number) of the production resource and tool in this field.

Designation

The designation for the production resource and tool can be entered in this field.

Comment 1 / comment 2

These are comment fields.

Required quantity / unit

Required quantity of this resource that is needed for processing of the operation. This number of resources is reserved, when planning the operation in HYDRA shop floor scheduling (HLS). The quantity unit is merely used for comments.

Path

The logical reference to the path of the path configuration (menu: file > System administration > Paths) is to be defined here if a document is assigned as production resource and tool. Paths do not have to be defined for DNC resources; they result from the paths defined for the resource type. The field is to be left empty for all other production resources and tools.

File name

The file name of the document is to be defined here if a document is assigned as production resource and tool.

File names do not have to be defined for DNC resources; they result from the file names defined for the resource. The field is to be left empty for all other production resources and tools.

Editor / date / time

Editor as well as point in time of the last change

Please note for documents: If a new document is assigned to an operation, files will only be uploaded automatically, provided that the file has been selected by the file selection dialog. The file selection dialog can be opened by clicking the button next to the field "file name".

In this case, the path of the file that is loaded onto the server is shown below the input field for the file name. The upload is performed automatically upon saving.

If the file name is entered manually, files will not be uploaded.

If an error occurs during the upload, the corresponding data record will still be created.
