

1 FMEA Rating Numbers

Overview

Menu	Master data → Quality management → FMEA rating numbers
Transaction code	fmevnu
Function authorization	fmevnu

In order to assign FMEA rating numbers, the following three master data categories are required:

- Catalog to assign a factor B for the assessment
- Catalog to define likelihood of occurrence A.
- Catalog used for likelihood of detection E.

The three catalogs are integrated and displayed in one catalog. A differentiation is made by assignment (A, B, E, etc.).

By default, the process and product assessment catalogs for the catalog sorts "A, B, E" according to DGQ ("German Quality Society"), VDA volume 4 are included.

Purpose

Using this function, you can create and manage FMEA rating numbers that are assembled in catalogs. The entries are sorted in B, A and E assessments.

- Assignment of factor B for the assessment
- Definition of the likelihood of occurrence A
- Specifying likelihood of detection E

Integration

You need the application to process FMEAs.

On creating an FMEA, the user needs to select the catalog. This way, the user can assess the elements *Failure* and *Status of measures* using the assigned catalog entries.

Requirements

The licenses FMEA-EVS and FMEA-VDF are required for this function.

Selection criteria

The application provides the following selection criteria:

Assessment catalog

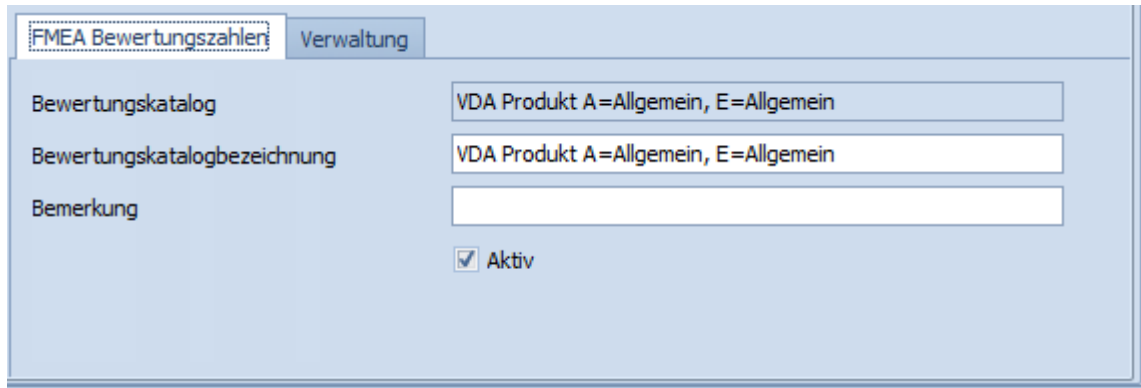

Enter the required catalog number.

Name of assessment catalog

The user can enter the required catalog designation.

Field descriptions

Detail panel: *Assessment Catalogs*

Assessment catalog

Alphanumerical field for free allocation of an assessment catalog number.

Name of assessment catalog

Alphanumerical field to name an assessment catalog.

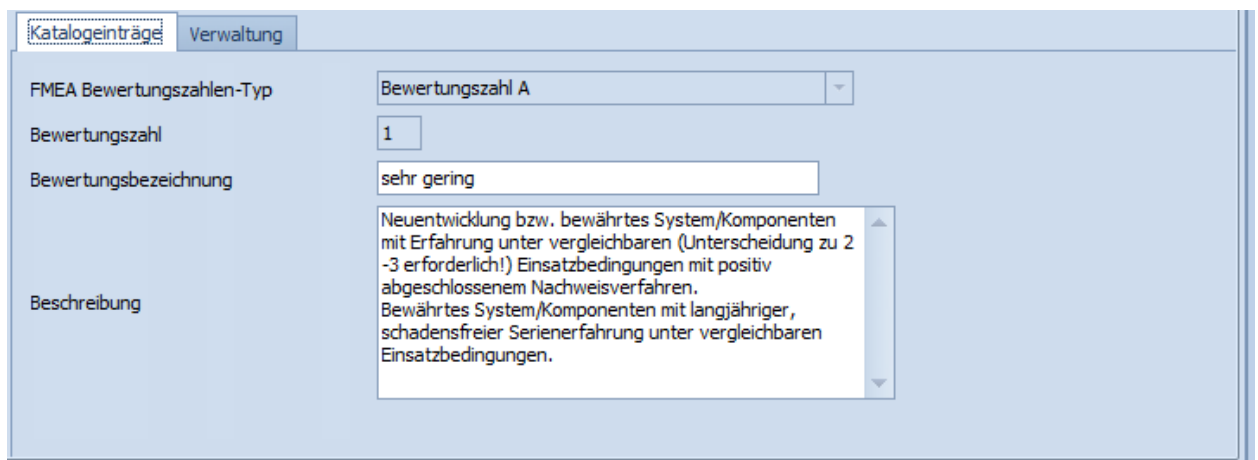

Comment

Free text field to add information.

Active

Checking this option, you enable the catalog. When creating an FMEA, only active assessment catalogs can be selected.

Detail panel: *Entries of Assessment Catalog*

FMEA type of rating numbers

You can select the FMEA type of rating number:

- FMEA rating number A = likelihood of occurrence
- FMEA rating number B = Meaning
- FMEA rating number E = likelihood of detection

FMEA rating number

Value for the FMEA rating number (e.g. 1 = low, 5 = moderate, 10 = high). Values between 0 and 10 are possible.

Evaluation name

Evaluation of the rating number (e.g. 1 = low, 5 = moderate, 10 = very high)

Description

You can enter the description of the FMEA rating number in this field.
