

1 First Pass Yield

Overview

Menu	Quality management → Process analysis → First Pass Yield
Transaction code	fpygen / fpyrep
Function authorization	fpyrep

First Pass Yield (FPY) is a key figure of the quality management and the process management. The FPY describes the number of parts produced in the first manufacturing cycle without failure or rework.

Purpose

The application *First Pass Yield* provides a KPI with the same in the MOC.

The KPI FPY can be shown in the following units:

- Percent. The FPY is usually indicated in percent. An FPY of 86 % signifies that 86 out of 100 produced units comply with the specifications.
- dpmo (defects per million opportunities)
- ppm (parts per million)

By default, the FPY is indicated in percent.

The higher the FPY, the higher the profitability with regards to process quality.

In addition to *First Pass*, there are the other KPIs *Second Pass* (SPY), *Third Pass* (TPY) and *No Pass* (NP).

An application is to be made available at the MOC, which allows to determine the KPIs FPY, SPY, TPY and NP on the basis of the work process, the article and the time period.

Integration

Requirements

- Use/configuration of the characteristics etc... for PDV 8.2.
- Can only be used to trace single parts.
- A serial number is mandatory. This serial number is transferred from the machine as a tag with the relevant process data.

- The data record that contains the characteristic FAIL / PASS (1/0) is transferred from the workplace for each test run.
- Use tables in the TNT structure.
- The system performs for each operation the calculation to pass a part with FPY. The process is not performed if the OP is interrupted.

Selection criteria

The application provides the following selection criteria:

Article/item

The collected data is displayed for an entered article.

Year

The collected data is displayed for an entered period of time.

MES order number

The system shows the collected data for the entered MES order number.

Field descriptions

MES order number

The field *MES order number* shows the MES order number.

Article/item

The field *Article* shows the article number from the operation performed.

Article name

The field *Article name* shows the article name from the operation performed.

FPY

The field *FPY* shows the KPI *First Pass Yield* in percent.

SPY

The field *SPY* shows the KPI *Second Pass Yield* in percent.

TPY

The field *TPY* shows the KPI *Third Pass Yield* in percent.

NP

The field *NP* shows the KPI *NO Pass* in percent.

Detailed view - Bar chart

In addition to the display of FPY, SPY, TPY and NP in the table, a further view is available as a bar chart. If the user selects an order on the right hand side, the system displays a corresponding bar chart on the left hand side.

Detail view - pie chart_1

The view *pie chart_1* shows the KPI *FPY*. Other KPIs are displayed together as "Others".

Detail view - pie chart_2

The view *pie chart_2* shows the KPI *FPY*. The rest of the KPIs (SPY/TPY/NP) are shown individually.
