

1 INI Configuration

Summary

Menu	System Administration → System Settings → INI Configuration
Transaction code	inicfg
Function authorization	inicfg.*

Utilization

The INI configuration allows for existing INI entries to be changed or new entries to be created.

Integration

Keys/value pairs can be recorded for the generated INI entries using the [INI data configuration](#)

The individual functions and applications individually define which INI configurations are used within the system and which possible entries exist for them.

Field Descriptions

Name

Technical name of the INI entry.

MOC User

Entries may be created for a specific user (a uniquely identifiable GUI user). The interpreting application determines whether or not such a specific configuration is possible.

If this is not the case the field is assigned to "0".

Comment

User-defined text for detailed descriptions

Responsibility area

Reference of the configuration to a [responsibility area](#).

It might be necessary to create further detail records for the generated header record using the [INI Data Configuration](#).
