

1 Time Sheet Configuration

Summary

Menu	Master data → Labor time → Time sheet configuration
Transaction code	ptsc
Function authorization	ptsc

After this menu item is called, all existing [time sheets](#) are displayed:

Field descriptions

Period

This option can be used to specify whether or not the time sheet is a *daily* time sheet. In contrast to a time sheet for a *settlement period*, with a daily list, the period to be displayed can be chosen freely. However, account balances are not displayed at the beginning and end of the settlement period.

Responsibility area

The responsibility area can be used to control which users can edit the time sheet. When the time sheet is displayed, a check is also made regarding whether or not the user is authorized for the *display* of the responsibility area.

Wage type group

This field can store a wage group that contains all of the wage types that are to be displayed at the end of the time sheet as monthly wage types. If the field is empty, all of the wage types present are displayed as long as the presentation of the monthly wage types is activated in the time sheet.

Creating a new time sheet is not possible. Instead, existing lists can be copied and modified.

Toolbar

Time sheet columns

Calls the [time sheet columns](#). The 20 fields of the time sheet may be assigned to wage types or wage type groups. Consequently, this information will also be available when printing the daily data.
