

1 Sorting Rules

Overview

Menu	Master data → Production control → Sorting rule
Transaction code	plstrs
Function authorization	mdplstrs

Purpose

You use this function to create or change sorting rules applied in the system's automatic assignment function.

Integration

Priority rules are used during [automatic assignment](#). The orders to be planned are ranked by priority and placed in a queue. To identify the priorities, different priority rules are available.

In order to use a priority rule, it is assigned to a [planning variant](#).

Selection criteria

The application provides the following selection criterion:

Description

Use this input field to search for the description of sorting rules that have already been created. You can also use wildcards.

Field descriptions

The table on the left hand side shows all sorting rules configured. If you select a sorting rule, the table on the right hand side shows the key figures (here: acronyms) assigned to this sorting rule. The key figures specify the order-related fields used for the sorting of the queue.

Table - left hand side

Priority rule

All sorting rules are set up using the acronym "SORT". This is a fixed value that is assigned when a new sorting rule is created.

Description

Detailed information on the priority rules.

Responsibility area

Use the responsibility area to control the access to the priority rule.

Table - right hand side

Key figure

Key figure (here: acronym) specifying the field of the order backlog. The possible key figures are described below.

Priority

The priority specifies the sequence used to sort the key figures.

Sorting

The field *Sorting* defines whether sorting is performed in ascending (A) or in descending (D) order.

Toolbar

The toolbar includes six icons used for editing:

The first three icons are used to manage the priority rules, the second three icons are used to edit the separate key figures.

How to proceed

To create a priority rule, follow the steps listed below:

1. To create a new priority rule, click the button *Insert* in the *Functions* category.
2. Select this priority rule from the list and now click the icon *Insert* in the *Rules* category to assign the separate key figures.

Key figure	Designation	Object
AUNR.DATFB	Basic start date	Order
AUNR.DATSE	Basic end date	Order
ANR.EXTPRIO	Priority	Order
AUNR.PUFZ	Buffer time	Order
AUNR.AUIDX	Order index	Order
ANR.ANR	Order number	Order
ANR.KDAUNR	Sales order	Order

Key figure	Designation	Object
ANR.DATTERMB	Scheduled start date	Operation
ANR.DATTERME	Scheduled end date	Operation
ANR.DATFB	Earliest start date	Operation
ANR.DATFE	Earliest end date	Operation
ANR.DATSB	Latest start date	Operation
ANR.DATSE	Latest end date	Operation
ANR.AGNR	Operation number	Operation
ANR.WNR	Tools of the OP	Operation
ANR.ATK	Article of the OP	Operation
ANR.FU:1	User field 1 of the OP	Operation
ANR.FU:2	User field 2 of the OP	Operation
ANR.FU:3	User field 3 of the OP	Operation
ANR.FU:7	User field 7 of the OP	Operation
ANR.FU:8	User field 8 of the OP	Operation
ANR.FU:9	User field 9 of the OP	Operation
ANR.FU:29	User field 29 of the OP	Operation
ANR.FU:30	User field 30 of the OP	Operation
ANR.FU:31	User field 31 of the OP	Operation
ANR.FU:23	User field 23 of the OP	Operation
ANR.FU:24	User field 24 of the OP	Operation
ANR.FU:25	User field 25 of the OP	Operation
