

1 Posting Functions for Operations

Usage

The operation-related functions enable operations to be logged on/off or interrupted and partial confirmations/uploads to be performed.

Integration

The functions are integrated in the following applications:

- [Order overview](#)
- [Workplace overview](#)

Prerequisite

In order to post operations, they must have been created in the system. In addition, one person with appropriate posting authorization has to be created in the HR master data so that the BDE posting may be confirmed by this person's badge number.

Restrictions

Due to their complexity, batch-related order postings cannot be performed via these posting dialogs.

Log operation on

Function authorization	op.logon
Posting dialog	A_AN

A prepared or interrupted operation can be logged on to a workplace by means of this function. The posting dialog for logging on operations is opened. The following fields are contained:

Workplace

Workplace at which the operation is to be logged on. By default, this field contains the workplace of the currently selected operation.

MES order number

Combined order/operation number of the operation to be logged on. By default, this field contains the operation number of the currently selected operation.

Badge

Badge number of the person performing the logon.

After confirming the posting dialog, the operation is logged on to the relevant workplace in the system.

Partial confirmation/upload of operation

Function authorization	op.partconf
Posting dialog	A_TR

Using this function, a partial quantity can be confirmed/uploaded for a running operation. Yield or scrap quantities may be posted on an operation without having to interrupt or terminate the operation. A partial confirmation/upload is always possible for only one operation at a time. The following fields are contained:

Workplace

Workplace on which the partial upload is to be made. By default, this field contains the workplace of the currently selected operation.

Operation

Operation on which the partial upload is to be made. By default, this field contains the operation number of the currently selected operation.

Badge

Badge number of the person performing the confirmation/upload.

Yield

Yield to be posted for the operation.

Scrap

Scrap to be posted for the operation.

Scrap reason

If a scrap quantity was indicated, an appropriate scrap reason is to be indicated here.

Posting required

The effect of a mandatory posting is that the posting is accepted even if plausibility errors such as "Error due to overdelivery" occur.

After confirming the posting dialog, the relevant quantity is recorded for the operation in the system. Recording rules, if present, are observed here.

Interrupt operation

Function authorization	op.interrupt
Posting dialog	A_UN

This function can be used to interrupt a running operation. The following fields are contained:

Workplace

Workplace on which the interruption is requested. By default, this field contains the workplace of the currently selected operation.

Operation

Operation on which the interruption is requested. By default, this field contains the operation number of the currently selected operation.

Badge

Badge number of the person performing the posting.

Yield

Yield to be confirmed/posted for the operation.

Scrap

Scrap to be confirmed/posted for the operation.

Scrap reason

If a scrap quantity was indicated, an appropriate scrap reason is to be indicated here.

Posting required

The effect of a mandatory posting is that the posting is accepted even if validation errors such as "Error due to overdelivery" occur.

After confirming the posting dialog, the operation is interrupted in the system and the relevant quantity is recorded. Recording rules, if present, are observed here.

Log operation off

Function authorization	op.logoff
Posting dialog	A_AB

This function may be used to log off a running operation. The following fields are contained:

Workplace

Workplace on which the logoff is requested. By default, this field contains the workplace of the currently selected operation.

Operation

Operation on which the logoff is requested. By default, this field contains the operation number of the currently selected operation.

Badge

Badge number of the person performing the posting.

Yield

Yield to be confirmed for the operation.

Scrap

Scrap to be confirmed for the operation.

Scrap reason

If a scrap quantity was indicated, an appropriate scrap reason is to be indicated here.

Posting required

The effect of a mandatory posting is that the posting is accepted even if validation errors such as "Error due to overdelivery" occur.

After confirming the posting dialog, the operation is logged off in the system and the relevant quantity is recorded. Recording rules, if present, are observed here.

Terminate operation

Function authorization	op.finish
Posting dialog	A_BE

This function can be used to terminate a prepared or interrupted operation. The following fields are contained:

Workplace

Workplace on which the finish posting is requested. By default, this field contains the workplace of the currently selected operation.

Operation

Operation on which the finish posting is requested. By default, this field contains the operation number of the currently selected operation.

Badge

Badge number of the person performing the posting.

Yield

Yield to be confirmed for the operation.

Scrap

Scrap to be confirmed for the operation.

Scrap reason

If a scrap quantity was indicated, an appropriate scrap reason is to be indicated here.

Posting required

The effect of a mandatory posting is that the posting is accepted even if validation errors such as "Error due to overdelivery" occur.

After confirming the posting dialog, the operation is terminated in the system and the relevant quantity is recorded. Recording rules, if present, are observed here.
