

1 Resource Performance Accounts

Overview

Menu	System Administration → System Settings → Resource Performance Accounts
Transaction code	rpa
Function authorization	mdrpa.*

Application to define the resource performance accounts.

RPA number	RPA abbrev.	Designation
1	SUT	Secondary Usage Time
2	FCI	Fault-caused Interr.
3	LCI	Logistics-caused Interr.
4	SCI	Staff-caused Interr.
5	IMN	Idle mode, not scheduled
6	IMS	Idle mode, scheduled
7	SEP	Setup
8	SUP	Start-Up
9	U8	User-defined RPA01
10	U9	User-defined RPA02
11	MUT	Main Usage Time
12	BKS	Breaks

Usage

The resource performance accounts (RPA) consist of 12 time accounts, which are processed by HYDRA in relation to both operation and machine. They are used for classified time recording, as is customary in REFA, and can be used in various reports and evaluations.

Depending on the current status of the machine, the time is charged to the resource performance account that was defined for this particular status during system configuration.

Integration

Prerequisites

Selection Criteria

The following selection criteria are available to the application:

RPA Abbreviation

Unique resource performance account abbreviation

RPA Number

Unique running resource performance account number

Designation

Resource performance account designation

Field Descriptions

RPA Abbreviation

Unique resource performance account abbreviation

RPA Number

Unique running resource performance account number

Designation

Resource performance account designation

Details

The following resource performance accounts are available in HYDRA by default:

RPA	Abbreviation	Designation	Color
1	SUT	Secondary usage time	Dark Green
2	DCI	Disturbance-caused interruption Defect related interruption (= technical interruption)	Red
3	LCI	Logistics-caused interruption Process related interruption (= organizational interruption)	Pink (Magenta)

RPA	Abbreviation	Designation	Color
4	SCI	Staff-caused interruption Staff related interruption	Violet (Purple)
5	IMN	Idle mode, not scheduled Not in use, not planned	Black
6	IMS	Idle mode, scheduled Not in use, planned	Dark Gray
7	SET	Setup	Light Turquoise
8	STA	Startup	Light Blue
9	U8	Free (e.g. test production)	Dark Blue
10	U9	Free	Brown
11	MUT	Main usage time; "Production"	Light Green
12	BKS	Neutral time, e.g. off, breaks: times not collected	Olive Green

The number of resource performance accounts is exactly 12. It is not possible to define new resource performance accounts or delete existing accounts. Only a resource performance account designation can be modified.

A HYDRA consultant can define the usage of the resource performance accounts as part of the customization process to meet customer requirements. The following restrictions are applicable:

- Productive times are always posted to RPA 11.
- Neutral times (e.g. no-shift times like weekends) are always posted to RPA 12.
- The capacity utilization rate is calculated using the fixed formula described in the capacity utilization rate.

No status can be collected for group workplaces. The system collects all times to RPA 11.
