

1 Workflow Management - Workflow Groups

Overview

Menu	Master data – Workflow management – Workflow groups
Transaction code	wfgr
Function authorization	wfgr

Usage

In the Workflow group application, user groups can be defined and managed for workflow management. The actual filing/creation of the groups, however, is performed in the MES workflow management server.

Selection Criteria

The following selection criteria are available to the user:

Group name

Name of group. Please note: wildcards are not supported.

E-mail address

E-mail address of group. Please note: wildcard entry is not possible.

Workflow Groups Detail Application (Table)

The Workflow group detail application includes a tabular overview of the groups created and the related attributes.

The data available in the table are described below. These data might not be shown by default. In this case, they can be added using the column selection.

Group name

Name of group

Group designation

Designation of group

E-mail address

E-mail address of group

Editing Functions

To create new workflow groups, or edit or delete existing ones, please use the buttons provided. There is no function to copy workflow groups.
