

1 Workflow Management - Workflow Roles

Overview

Menu	Master data – Workflow management – Workflow roles
Transaction code	wfrole
Function authorization	wfrole

Usage

In the Workflow roles application, roles can be defined and administered for workflow management. The actual filing/creation of roles, however, is performed in the MES workflow management server.

Selection criteria

The following selection criteria are available to the user:

Role name

Name of role. Please note: wildcard entry is not possible.

Workflow Roles Detail Application (Table)

The Workflow roles detail application includes a tabular overview of the groups created and the related attributes.

The data available in the table are described below. These data might not be shown by default. In this case, they can be added using the column selection.

Role name

Role name

Role designation

Role designation

Editing Functions

To create new workflow roles, or edit or delete existing ones, please use the buttons provided. There is no function to copy workflow roles.
