

1 Absence Planning and Approval

1.1 General

This application displays the planned and requested absences of the employees. The user can edit the absences and approve or reject the absences.

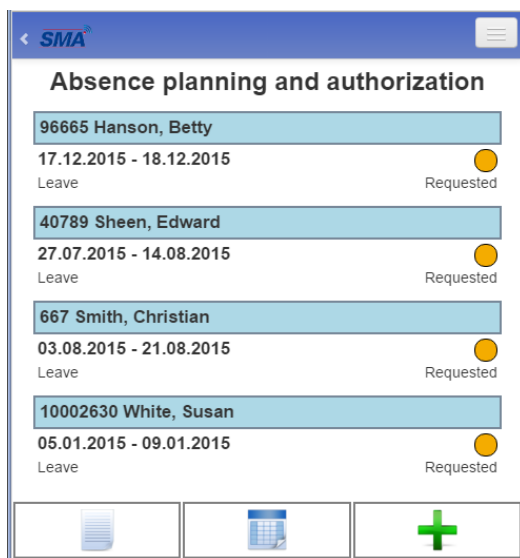

You can display the absences in a list or calendar.

In the calendar view, you can also show the planned shift type of shift workers.

To use the application, the user requires the function authorization **sma.apaa**.

1.2 Overview

For the list view, you can configure if only the requested absences or the requested, approved and planned absences of the employees are displayed:

Executives are usually authorized to view all subordinate employees. But when it comes to editing the absence requests, only the direct subordinates are displayed.

The user can use the additional selection criterion *Supervisor* and enter their own personnel number to only show the direct subordinates.

Using the selection criterion *Planning profile*, the user can flexibly narrow down the persons displayed. You can then display the employees of one or several departments, for example.

You can only filter by the supervisor, if the extension [SMA-APAAVGS](#) is available.

You can only filter by the planning profile, if the extension [SMA-APAABEARBPROF](#) is available.

Selection criteria

Date from, to

The date range specified is only active for the calendar view. The list view always shows all current and future requests or absences.

Only requested absences

This option specifies if only absences with status *requested* or also approved and planned absences are displayed in the list view.
