

1 Activating new MPL/TRT dialogs (SP13)

Purpose

With service pack 13, new and updated dialogs are available for MPL and TRT. This documentation describes how to import these dialogs into HYDRA.

Requirements

Service pack 13 must be installed and activated.

For new customers, the new/updated MPL or TRT dialogs are directly available once the service pack 13 has been released.

Procedure

1. Open the MS-DOS prompt of the HYDRA system where you want to import the dialogs.
2. For UNIX or Windows systems, enter the following commands in the MS-DOS prompt.

- UNIX systems:

```
hymw.out -u9999 -b"db_sql/dlg_mpl82_2.dlg"
```

- Windows systems:

```
hymw.exe -u9999 -b"db_sql/dlg_mpl82_2.dlg"
```

3. To execute the commands, press the Enter key. The dialogs are imported for the type "AIPDEF" and user "999" in HYDRA.

Depending on how the dialogs are used, you must copy the imported dialogs. You can use the imported dialogs to overwrite the standard delivery or you can use the dialogs for a specific terminal group or terminal only.

1. Copy the required dialogs.
2. Activate the copied dynamic dialogs.
3. Restart the terminals.

Result

The MPL or TRT dialogs, which are available as of service pack 13, have been copied into the system.

Dialog	Name
CA_WL_MPL	Change output batch
BATCH_MERGE	Merge batches
BATCH_SPLIT	Split batch
CE_HU	Input: Pack batch
CE_DEL_HU	Unpack transport unit (TPU)
BATCH_UNMERGE	Unmerge merged batch
