

1 Configuration of Campaign Production

Overview

The function [Generate campaign](#) included in HYDRA shop floor scheduling (HLS) offers the option to group operations in campaigns if the operations have one specific criterion in common.

In the following, find the necessary configurations to use the function *Generate campaign*.

Configuration of comparison criterion for campaigns

Menu	System administration → System settings → Advanced object configuration
Transaction code	adoc
Function authorization	adoc.*

Create comparison criteria for campaigns in the *Advanced object configuration*. Define the following values for new objects:

Parameter	Value
Object type	MNR
Object ID 1	<workplace number>
Parameter	campaign
Parameter value	<comparison criterion>

The following table shows an example of such a configuration. If this configuration is enabled, the machine 50610 can group operations with identical article number (operation.article) in campaigns:

Object type	Object ID 1	Object ID 2	Object ID 3	Object ID 4	Parameter	Parameter value	Active
MNR	50610				campaign	operation.article	☒

Advanced object configuration							
Drag a column here to group by that column							
	Default						
	Obj...	Object ...	Object ID 2	Object ID 3	Object ID 4	Parameter	Parameter value
▶ MNR	50610					Campaign	operation.article
							☒

The following table lists possible values for the comparison criterion.

formula.formula	operation.userfield01
operation.act.blocked	operation.userfield02
operation.act.first_logon_ts	operation.userfield03

operation.act.fixed	operation.userfield04
operation.act.labor_utilization	operation.userfield05
operation.act.last_interruption_ts	operation.userfield06
operation.act.last_logoff_ts	operation.userfield07
operation.act.last_logon_ts	operation.userfield08
operation.act.last_posting_ts	operation.userfield09
operation.act.ordertype	operation.userfield10
operation.act.plant	operation.userfield11
operation.act.pre_production_indicator	operation.userfield12
operation.act.predecessor_status	operation.userfield13
operation.act.predecessor_status.led	operation.userfield14
operation.act.problem.base	operation.userfield15
operation.act.problem.primary	operation.userfield16
operation.act.problem.secondary	operation.userfield17
operation.act.problem.tertiary	operation.userfield18
operation.act.production_indicator	operation.userfield19

Configuration of number range for campaign production

Menu	System administration → System settings → Number ranges
Transaction code	mdnumr
Function authorization	numr

Define the following number range for the campaign production:

Parameter	Value
Object	CAMPAIGNNO
Key	SYSTEM
Value	-
Type	V
Assignment code	NUM
Prefix	C
Range from	00000000001
Range to	99999999999
Current value	00000000001

Please note: The length of prefix + range must not exceed the length of the MES order number.

Processing code

Menu	Master data → Order → Processing codes
Transaction code	pc
Function authorization	mdpc

Edit the processing codes that should be controlled by the campaign control. Select tab *Posting*. Go to *Terminate OP when reaching target quantity* and enter *K - Campaign control: Finish automatically and log on subsequent OP of the same campaign*. Save your settings.
