

1 Automatic Logon of Continuous Monitoring Orders: Configuration

Create a specific order type

Copy order type "0" to create a new [Order type](#) for continuous monitoring orders.

Activate the *automatic logon of continuous monitoring orders* for the entire system

Enable the *automatic logon of continuous monitoring orders* in the [HYDRA INI configuration](#):

Parameter name	Value
INI name	BDE
Section	AUTOMATIC_OPERATION_LOGON
Key	ACTIVE
Value	Y Yes N No (by default)
Active	Yes
Comment	...

Activate the *automatic logon of continuous monitoring orders* for specific workstations

Enable the *automatic logon of continuous monitoring orders* in the [HYDRA INI configuration](#):

Parameter name	Value
INI name	BDE
Section	AUTOMATIC_OPERATION_LOGON
Key	<Machine/workplace>

Parameter name	Value
Value	Y Yes N No (by default)
Active	Yes
Comment	...

Configure the order type

Specify the order type in the [HYDRA INI configuration](#):

Parameter name	Value
INI name	BDE
Section	AUTOMATIC_OPERATION_LOGON
Key	ORDERTYPE
Value	<Order type to be integrated>
Active	Yes
Comment	...

Specify the logon mode for running operations

In the [HYDRA INI configuration](#) specify if:

- you only want to log on the operation with the earliest planned start date or
- all found operations in the order of their planned start dates:

Parameter name	Value
INI name	BDE
Section	AUTOMATIC_OPERATION_LOGON
Key	ITERATE

Parameter name	Value
Value	Y All operations N Only the operation with the earliest planned start date (by default)
Active	Yes
Comment	...

Specify the logoff mode for running operations

Specify in the [HYDRA INI configuration](#) how to proceed with running operations: if you want to interrupt or finish these operations:

Parameter name	Value
INI name	BDE
Section	AUTOMATIC_OPERATION_LOGON
Key	LOGOFFTYPE
Value	I Interruption F Logoff (by default)
Active	Yes
Comment	...

Generate orders and operations

Generate orders with the created order type. Generate at least one operation for this order.

It doesn't matter to the processing if orders and operations are:

- transferred from an ERP system
- created manually in HYDRA or
- generated manually from work plans in HYDRA.

Irrespective of their origin, you must add at least the following data to the orders and operations:

Field	Value
Order header	
Order type	Created order type
Operation	
Planned for	Machine
Workplace	<Workstation the OP is logged on to>.
Planned start (go to: Order information → Operations → Operation → Dates → Planned dates → Planned start).	Date and time of the planned start date.

You might have to add additional data, such as the target cycle, in order to view specific target data in evaluations and reports. This depends on the evaluations you want to use.
