

1 Server-Controlled Shift Change: Configuration

Activation of server-controlled shift change

You can configure the server-based shift change for the entire system in the [HYDRA INI configuration](#). Instead of a global activation, you can enable the server-based shift change for specific machines only:

Parameter name	Value
System-wide definition	
INI name	MDE
Section	SERVER_BASED_AUTOMATIC_SHIFT_CHANGE
Key	SYSTEM for system-wide definition.
Value	Y automatic shift change. N no automatic shift change (by default)
Active	Yes
Comment	...
Machine-related definition	
INI name	MDE
Section	SERVER_BASED_AUTOMATIC_SHIFT_CHANGE
Key	<Machine> Machine / workplace
Value	Y automatic shift change. N no automatic shift change (by default)
Active	Yes
Comment	...

Activate the cyclic trigger program

You can configure a trigger program in the [HYDRA scheduler](#) in order to change shifts even if the sender does no longer send messages (offline mode or no production).

Parameter name	Value
Product key	
License key	
Command (Windows):	sh.exe ./ade_aswtrigger.scr
Command (Unix):	./ade_aswtrigger.scr
Comment:	Trigger for the server-controlled shift change.
Interval	30
