1 Übersicht Drucken Arbeitspapiere

Purpose

This component provides two printed reports showing order or operation-related data.

You use the function package if

- You need an order-related document that you can give to production to be attached to material, for example, as a waybill.
- You need an operation-related document that you can give to production in which handwritten operation-related information can be noted.
- You need a barcoded document that you can use to import an operation at the terminal using a barcode scanner.

Integration

Data contained on the shop floor paper or time ticket are drawn from the HYDRA order backlog. If planning dates are shown, depending on the type of planning, they have either been retrieved from the ERP system or they are the result of detailed scheduling performed in HYDRA shop floor planning.

You can customize the system to adjust the layout or to add additional information.

Features

- Option to print time tickets with a barcode
- Option to print shop floor papers with a barcode

2 Print Shop Floor Papers

Summary

Menu	Production control → Production support → Pool of orders
Transaction code	- (plop for pool of orders)
Function authorization	repsfpap

Usage

The purpose of these functions is to print out shop floor papers with a barcode as an order/ production paper (in part also referred to as job tickets).

Integration

The function is called up from the order backlog application. Depending on the order/ orders selected, a separate shop floor paper is displayed in the preview screen for each order, which from there can be printed.

To print a shop floor paper, follow the steps listed below:

1. In the list, highlight the orders/ operations you would like to print out on the shop floor paper. Click on the top left-side corner of the table if you want to highlight all operations.
2. Click on the "shop floor paper" icon to call up the print preview screen. In it, there will be one new page for each order.
3. Click on the icon "Print report"  in the print preview to print out the shop floor papers on the default printer set in MOC.

The information displayed is defined in the order header or at the operation. The layout can be adjusted to customer specifications when HYDRA is customized.

3 Print Time Tickets

Summary

Menu	Production control → Production support → Pool of orders
Transaction code	- (plop for pool of orders)
Function authorization	reptimet

Usage

The purpose of these functions is to generate a time ticket. A separate time ticket (or goods issue/ goods receipt document) can be created and printed for each order.

Integration

The function is called up from the order backlog application. Depending on the order/ orders selected, a separate time ticket is displayed in the preview screen for each order, which can be printed from there.

To print the time ticket/ time tickets, follow the steps listed below:

4. In the list, highlight the orders/ operations you would like to print out on the time ticket. Click on the top left-side corner of the table if you want to highlight all operations.
5. Click on the "time ticket" icon to call up the print preview screen. In it, there will be one new page for each order.
6. Click on the icon "Print report"  in the print preview to print out the time tickets on the default printer set in MOC.

Please note: Printing the time tickets will cause an indicator "printed" to be set at the relevant operation. The indicator is made available for display in the order overview.

A printout contains all important barcodes needed to post all of this order's operations. The information displayed is defined in the relevant order header.

Notes about the selected fields

Start date

Planned start as specified in the operation (Dates index tab).

Finish date

Planned end as specified in the operation (Dates index tab).

Set up

Setup time as specified in the operation (Dates index tab).

Please note: Any existing setup time addition is not taken into account.

Processing

Processing time as specified in the operation (Durations index tab).

Please note: In the event of any change in the target cycle and/or the partitioning (e.g. planning in HLS using production variants), this will not update the processing time at the operation.

Tr

Target tr as specified in the operation (Durations index tab).

Te

Target te as specified in the operation (Durations index tab).

The layout can be adjusted to customer specifications when HYDRA is customized.
