1 Energy Management: Consumption Recording for Production Orders

Possible fields of application

Application service (AS) including functions for the assignment of recorded consumption values to objects from shop floor data collection and materials management.

The function package is used if you would like:

- to post consumption as material in relation to the produced articles/items or orders.
- to perform evaluations/reports based on materials management
- to analyze consumption in connection with the produced orders.

Integration

The licenses for the application services shop floor data/order data management (BDE-BDM) as well as material and inventory management (MPL-MBV) have been purchased. Consequently, the posting and evaluation logics of the relevant services are available. MOC evaluation functions from the modules shop floor data collection, materials management and energy management may be added. With respect to energy management, this is, for example, the function of the correlative consumption analysis EMG-KLE.

Functions

- Definition of "material types" for energy consumption
- Assignment of the "material" energy as consumption material within order data
- Consumption recording relating to orders and posting based on the energy meters assigned to the workplaces
- Listing of energy consumption relating to orders based on the consumption that has been recorded and posted as material
- Please note: Separate licenses have to be purchased for evaluations/reports used as MOC functions from the modules.
