1	Control Plan Overview	4
2	Control Plan	5

1 Control Plan Overview

Possible fields of application

The HYDRA control plan defines the basis for the creation of printable reports in compliance with QS9000. The inspection plans that have already been created in the other areas represent the basis for this.

Implementation notes

You use the control plan function if a corresponding report needs to be created or you would like to use control plans as a means of presenting inspection processes in a clear overview.

Integration

The production control plan requires inspection plans to have been created in the respectively relevant HYDRA areas, e.g.

- goods receipt,
- production and
- goods issue

Functions

- Editing function to enter and edit relevant master data (article, companies, parties responsible, etc.)
- Editing function for the creation and modification of control plans including, as far as possible, automatic creation by assigning existing inspection plans from goods receipt, production and goods issue.
- Management of different control plan versions including history management
- Definition of different release notes
- MS Word control plan based on QS 9000 including the option of changing terms or creating individual Word forms, provided that the license for the creation and management of Word forms (FEP-EVF) has been purchased.

2 Control Plan

Summary

Menu	Quality management → Production control plan → Control plan
Transaction code	cp
Function authorization	cp

Usage

This function enables the creation of control plans and printing of the form based on QS9000.

Prerequisite

Relevant master data need to be edited/maintained to be able to create complaints. Which master data have to be maintained depends on the respective field of application. Normally, the master data

- Articles
- Teams (=distribution list)
- Companies
- Parties responsible

- Inspection plans
- have to be maintained first.

Field descriptions

"Production control plan" tab

Area, production control plan, index

The "area", "control plan" and "index" uniquely identify all existing production control plans. The area may be selected. The control plan and index may be entered using alphanumeric characters. All three fields are mandatory fields.

The input of these three pieces of information must be unique, i.e. no other control plan may exist that already includes this information. By assigning a structured control plan number, it is possible to provide specific information. This information might be useful later during sorting.

Article, article designation, drawing issue number, drawing number

Input of the article number. If it is known it can be entered directly. Otherwise, the article catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required article. Once an article has been chosen from the master data record, the drawing issue number, article designation and drawing number are taken over and displayed in the relevant fields.

Active

Shows whether or not a control plan is active.

Valid from, valid to

If required, a validity period may be entered here, instead of the "unrestricted" activation (using the toolbar). Yet activation for a certain period means that the user has no clear overview of currently valid control plans, and it is therefore recommended to use the "global/unrestricted" activation option using the toolbar. If activated by toolbar functions, the system carefully monitors whether an active control plan already exists for the specified article and it also includes the same drawing issue number. If this is indeed the case, the previously active control plan will automatically be disabled.

Team, Team name

Entry of a distribution list/distributor. If it is known it can be entered directly. Otherwise, the distributor catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required distributor. By selecting a distribution list, the distributor and distributor name are taken over from the master data record and displayed in the relevant fields.

"Companies" tab

Customer, customer name, customer address 1-3

Entry of a customer. If it is known it can be entered directly. Otherwise, the customer catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required customer. By selecting a relevant customer, the customer, customer name and the address fields 1-3 are taken over from the master data record and displayed in the corresponding fields.

Manufacturer, manufacturer name, manufacturer address 1-3

Entry of a manufacturer. If it is known it can be entered directly. Otherwise, the manufacturer catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required manufacturer. By selecting a relevant manufacturer, the manufacturer, manufacturer name and the address fields 1-3 are taken over from the master data record and displayed in the corresponding fields.

Supplier, supplier name, supplier address 1-3

Entry of a supplier. If it is known it can be entered directly. Otherwise, the supplier catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required supplier. By selecting a relevant supplier, the supplier, supplier name and the address fields 1-3 are taken over from the master data record and displayed in the corresponding fields.

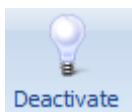

Toolbar

Activate

Function authorization: cp.activate

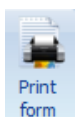

The control plan is assigned the status "active".

Deactivate

Function authorization: cp.deactivate

The control plan is assigned the status "released". Once a new control plan has been created, it has the status "in process". If the control plan is enabled and disabled afterwards, it will be assigned the status "released" to show that this control plan has been active before.

Show documents

Function authorization: cp.print

This function opens the detail application "printing", which in this case enables printing of the controlplan report.

Detail application "team members"

This dialog shows the distribution list entries of the distribution list assigned to the control plan in table form.

Team members							
Production control plan Documents Team members Releases							
Drag a column here to group by that column							
Team members							
Team	Team designation	P.i.charge type	Party in charge	Name p. in charg...	Name p. in charg...	Name p. in charg...	Ph
> CPL-001	Team Alpha	ext. Pers.	0001	Miller	Harry	HG	06
CPL-001	Team Alpha	ext. Pers.	0002	Zager	Peter	PZ	06
CPL-001	Team Alpha	ext. Pers.	0005	Caesar	John	WC	06

Detail application "documents"

Function authorization	Cp.view
------------------------	---------

Provided that the "documents" tab has been activated, as many documents as required may be assigned to each control plan. By enabling these tabs, the toolbar provides corresponding buttons to edit the documents. The documents that have already been assigned can be viewed in a list in the mentioned tab.

All formats registered by Windows are available, when documents are assigned. Consequently, simple documents (e.g. written in Word), drawings of any format and videos may be assigned. However, the corresponding programs that are able to display the required formats have to be installed. In this context, the documents are opened by the program that has been linked in Windows.

The file types "FILE", "URL" and "Text" are provided. The file name including path may be entered manually with the "file" type. The "URL" file type allows access to the Internet or Intranet. The third file type "Text" allows for text to be entered directly.

A designation may be assigned to each defined document.

Toolbar

In addition to the standard functions, there is also a button to show the documents.

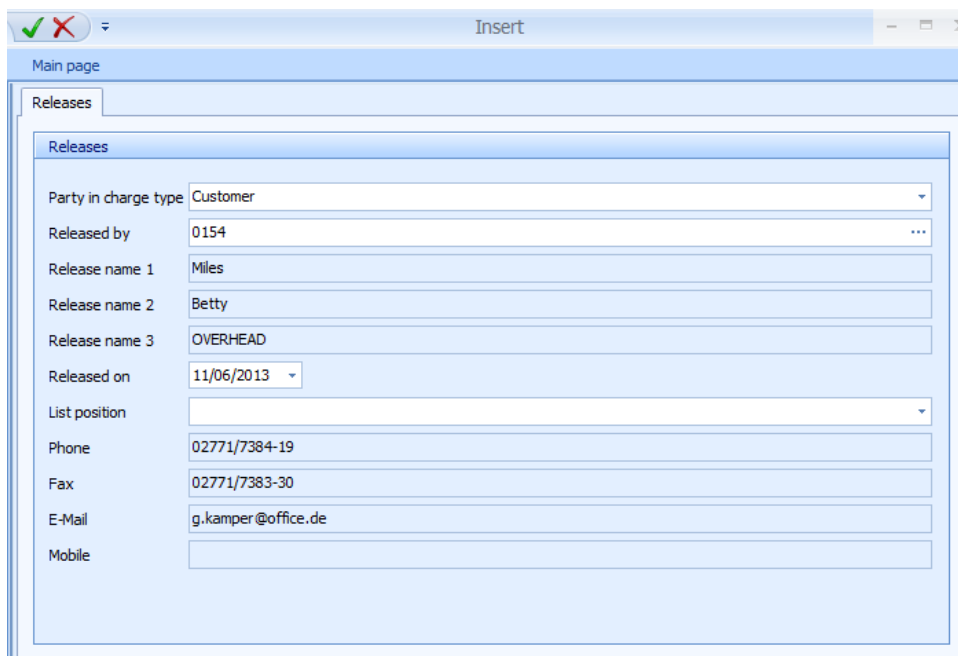

Show documents

If a document link is defined this button opens and shows this document. However, a program, which can show the linked file type, has to be installed on the PC. To open the documents, paths need to be configured in HYDRA.

Detail application "releases"

Control plans may be released.

Field descriptions

Party in charge type, released by, release name 1-3, phone, fax, e-mail, mobile

Input of the party responsible. If it is known it can be entered directly and the relevant party in charge type can be chosen using the selection list. Otherwise, the catalog of responsible parties can be opened and the provided filter and sort criteria may be used to identify and take over the required party responsible. By selecting a party responsible, the party responsible, release names 1-3, phone number, fax number, e-mail address and the mobile number are taken over from the master data record and displayed in the relevant fields.

Released on

Date of the release.

List position

Category of the different releases.

Detail application "inspection plan"

Function authorization	cppl
------------------------	------

If the detail application "inspection plans" is selected, all inspection plans pertaining to the control plan will be displayed.

An inspection plan can be selected using the search function (button showing the magnifying glasses). All areas are available.

The entry in the "position" field specifies where in the control plan the inspection plan is indicated.

Field descriptions

"Inspection plan" tab

Inspection plan, inspection plan index

Entry of the inspection plan. The inspection plan needs to be entered by using the search function (magnifying glasses), as in this case the area is also taken over. By selecting an inspection plan, the inspection plan, inspection plan index, article number, article name, drawing issue number, and the drawing number are taken over from the master data record of inspection plans and displayed in the relevant fields.

Article, article designation, drawing issue number, drawing number

Input of the article number. If it is known it can be entered directly. Otherwise, the article catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required article. Once an article has been chosen, the drawing issue number, article designation and drawing number are taken over from the master data record and displayed in the relevant fields.

Position

The entry in the "position" field specifies where in the control plan the inspection plan is indicated.

Operation, operation designation

Entry of the operation and operation designation.

Machine, machine name

Entry of the machine number and display of the machine designation.

"Companies" tab

Customer, customer name, customer address 1-3

Entry of a customer. If it is known it can be entered directly. Otherwise, the customer catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required customer. By selecting a relevant customer, the customer, customer name and address fields 1-3 are taken over from the master data record and displayed in the corresponding fields.

Manufacturer, manufacturer name, manufacturer address 1-3

Entry of a manufacturer. If it is known it can be entered directly. Otherwise, the manufacturer catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required manufacturer. By selecting a relevant manufacturer, the manufacturer, manufacturer name and the address fields 1-3 are taken over from the master data record of manufacturers and displayed in the corresponding fields.

Supplier, supplier name, supplier address 1-3

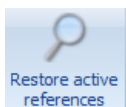

Entry of a supplier. If it is known it can be entered directly. Otherwise, the supplier catalog can be opened and the provided filter and sort criteria may be used to identify and take over the required supplier. By selecting a relevant supplier, the supplier, supplier name and the address fields 1-3 are taken over from the master data record and displayed in the corresponding fields.

Toolbar

Open inspection plan

The application "inspection planning" is opened and the selected inspection plan is displayed.

Restore active references

Function authorization: cppl.reference

References to active inspection plans are restored, i.e. in case another version of the inspection plan or inspection plans has been enabled in the meantime, this modification is now visible in the control plan.

However, this requires that exactly one version of the inspection is only enabled.

"Inspection plan characteristics" detail application

Characteristics											
Drag a column here to group by that column

This application shows the inspection plan characteristics of the selected inspection plan in table form.

Field descriptions

The fields pertaining to inspection plan characteristics are described in the document dealing with the application "inspection planning".

"Print" detail application

Function authorization	cp.print
------------------------	----------

The print dialog of the control plan opens a list of available reports. These are Word forms. The potential content of these forms is determined by the Web services that are available in the respective context. The form entries, i.e. the contents of the list of forms of the corresponding print dialog, are defined within the master data of quality management. The basis for new forms and the corresponding form properties are defined there as well. A corresponding license is required to be able to change the forms as regards content and design.

Print - toolbar

There are no other special function buttons in addition to the standard functions/features.
