1 Overview of Complaint Management Workflows

Fields of application

This component triggers workflows in complaint management. Individual workflows may be triggered, subject to the complaint type, complaint header and complaint details.

Implementation notes

Utilization of this component is recommended if different departments/persons are involved in complaint processing.

Integration

This component is only connected with complaint management and workflow design (provided that necessary licenses have been purchased and users have participated in required trainings). As workflows are normally only designed once, this component is nearly exclusively used in connection with complaint management.

Features

These functions are available.

- Different workflows for the complaint header and complaint detail
- Possibility to use different workflows subject to the complaint type (by default: supplier complaint, customer complaint and internal complaint)
- Automatic initiation of workflows including the creation of a complaint header or complaint detail
- Active information e.g. by e-mail, if workflow steps are activated
- Automatic or manual activation of workflow steps
- Assignment and triggering of tasks within a workflow step including deadlines and active notification as soon as it is likely that deadlines cannot be met
- Tasks can be edited and finished and the next process step can be activated automatically
- Start of the workflow history (which process steps/tasks have been performed and at what point in time)

2 Workflow Overview

Overview

Menu	System administration – Workflow management – Workflow overview
Transaction code	wfov
Function authorization	wfov

Usage

The workflow overview provides an overview of currently running, finished and instantiated workflows including status information on individual workflow steps.

Please note:

In order for the user to utilize this application, special privileges have to be assigned in the Insign Server.

Users need one of the two privileges:

→ InSpire:monitorServer

→ InSpire:manageServer

Via this overview, the user can switch to individual workflows without any task and view a tabular and graphic display of the workflow history (i.e. what happened in the individual steps). The display is structured in 2 parts:

1. Graphic presentation of the workflow with the individual steps
2. Tabular presentation of the "events" relating to a workflow. The following information is found here:
 - a. Which user processed which tasks and at what time?
 - b. Which information was transferred to the WFM system (which variables were filled)?
 - c. Time of workflow instantiation

Selection criteria

The following selection criteria are available in the application:

Status

This selection criterion refers to the status of the workflow. Multiple selection is possible. The following statuses may be selected:

- Active
- Finished
- Finishing

- Invalid
- Invalid threads
- New

Please note: If no selection is made, selection is made according to the statuses Active and New by default, and only these workflows will be displayed.

Last modification

Selection according to the date on which the last modification was made. Warning: correct filtering is only possible if both the From and the To date are set.

Process name

Selection according to the process name. Please note: wildcard entry is not possible.

Workflow Overview Detail Application (Table)

In the tabular Workflow overview detail application, all workflows are displayed in accordance with the selection made.

The data available in the table are described below. These data might not be shown by default. In this case, they can be added using the column selection.

Process ID

3 Workflow Events

Overview

Menu	System administration – Workflow management – Workflow events
Transaction code	wfev
Function authorization	wfev

Usage

The workflow events application shows instantiated workflows.

Prerequisite

Advanced object configuration

The workflow alias name must be defined in the "Advanced object configuration" application.

The screenshot shows a software window titled 'Edit' with a 'Main page' tab. It contains several input fields and a checkbox. The 'Object type' dropdown is set to 'WFM_CONFIG'. 'Object ID 1' is 'HYDRA_complaint_customer' and 'Object ID 2' is '1'. The 'Parameter' field contains 'Complaint_ComplaintType_KUNDE'. The 'Active' checkbox is checked. The 'Description' field contains 'Reference of customer complaint workflow template'. The 'Responsibility area' is an empty dropdown.

Object type

The fixed value WFM_CONFIG is to be defined here.

Object ID 1

The real workflow name is to be indicated here.

Object ID 2

The workflow version is to be indicated here.

Parameter

The workflow alias name is indicated here.

Selection criteria

The following selection criteria are available in the application:

Status

Status. The following statuses are available for selection:

- DONE
- DONE RESEND
- ERROR
- ERROR RESEND

Workflow Events Detail Application (Table)

The tabular workflow events detail application shows the workflows which were instantiated by HYDRA. If a workflow could not be instantiated, it can be instantiated again through this application.

The data available in the table are described below. These data might not be shown by default. In this case, they can be added using the column selection.

Workflow tab**Process ID**

Process ID

Status

Possible statuses:

- | | |
|--------------|--|
| DONE | → Workflow was instantiated |
| DONE RESEND | → Workflow was resent and then instantiated correctly |
| ERROR | → Workflow could not be instantiated |
| ERROR RESEND | → Workflow could again not be instantiated in a repeated attempt |

Status text

The error text of the workflow engine is shown here in the case of an error.

Module

Module which triggered the workflow.

Designation

**Resend**

Workflows in ERROR or ERROR RESEND status can be transferred once again.

**Workflow Information**

Function authorization: wfinfo

4 Workflow Management - Task List

Overview

Menu	System administration – Workflow management - Task list
Transaction code	wftl
Function authorization	wftl

Usage

Using workflow management will generate tasks in a running process, which are to be handled by a user and/or a specified user. The task list shows the generated tasks for a user or a group assigned to the user. In addition, the user can process, forward and/or adopt a task.

The definition of the workflow and the related task definition are created in a separate designer in MES workflow management.

Selection criteria

The task list provides the following selection criteria:

User

By default, this field contains the user who is currently logged on. To change the user in order to display other tasks, the function authorization wftladmin has to be entered for the user currently logged on.

Show finished tasks

If this box is checked, finished tasks are also displayed. Otherwise only active tasks are shown.

Show the user's tasks only

If this box is checked, only the tasks directly assigned to the user are displayed. Otherwise the tasks assigned to a group to which the current user was assigned are also shown.

Created

Selection by the creation date of the tasks. Warning: correct limitation is only possible if both the From and the To date are set.

Done by

Selection by the date by which the task has to be finished. Warning: correct limitation is only possible if both the From and the To date are set.

Description

Selection by the task description. Wildcard search using * is possible here.

Task List Detail Application (Table)

The tabular Task List detail application shows all tasks matching the selections made.

The data available in the table are described below. These data might not be shown by default. In this case, they can be added using the column selection.

Process ID

Process ID of relevant task

Task ID

Task ID of relevant task

Work step

Name of work step. The name of the work step is automatically generated from the process element.

Role

The task may be assigned to a person, a group or a role. The individual assignments are displayed as follows:

USER: → Task is assigned to a person

GROUP → Task is assigned to a group

ROLE: → Task is assigned to a role

Title

The "Task description" of the generic task is displayed here.

6 Workflow - Customer Complaint

6.1 Usage

This is the description of the standard workflow process to be used for processing customer complaints.

The workflow is administered under the name `HYDRA_complaint_customer`.

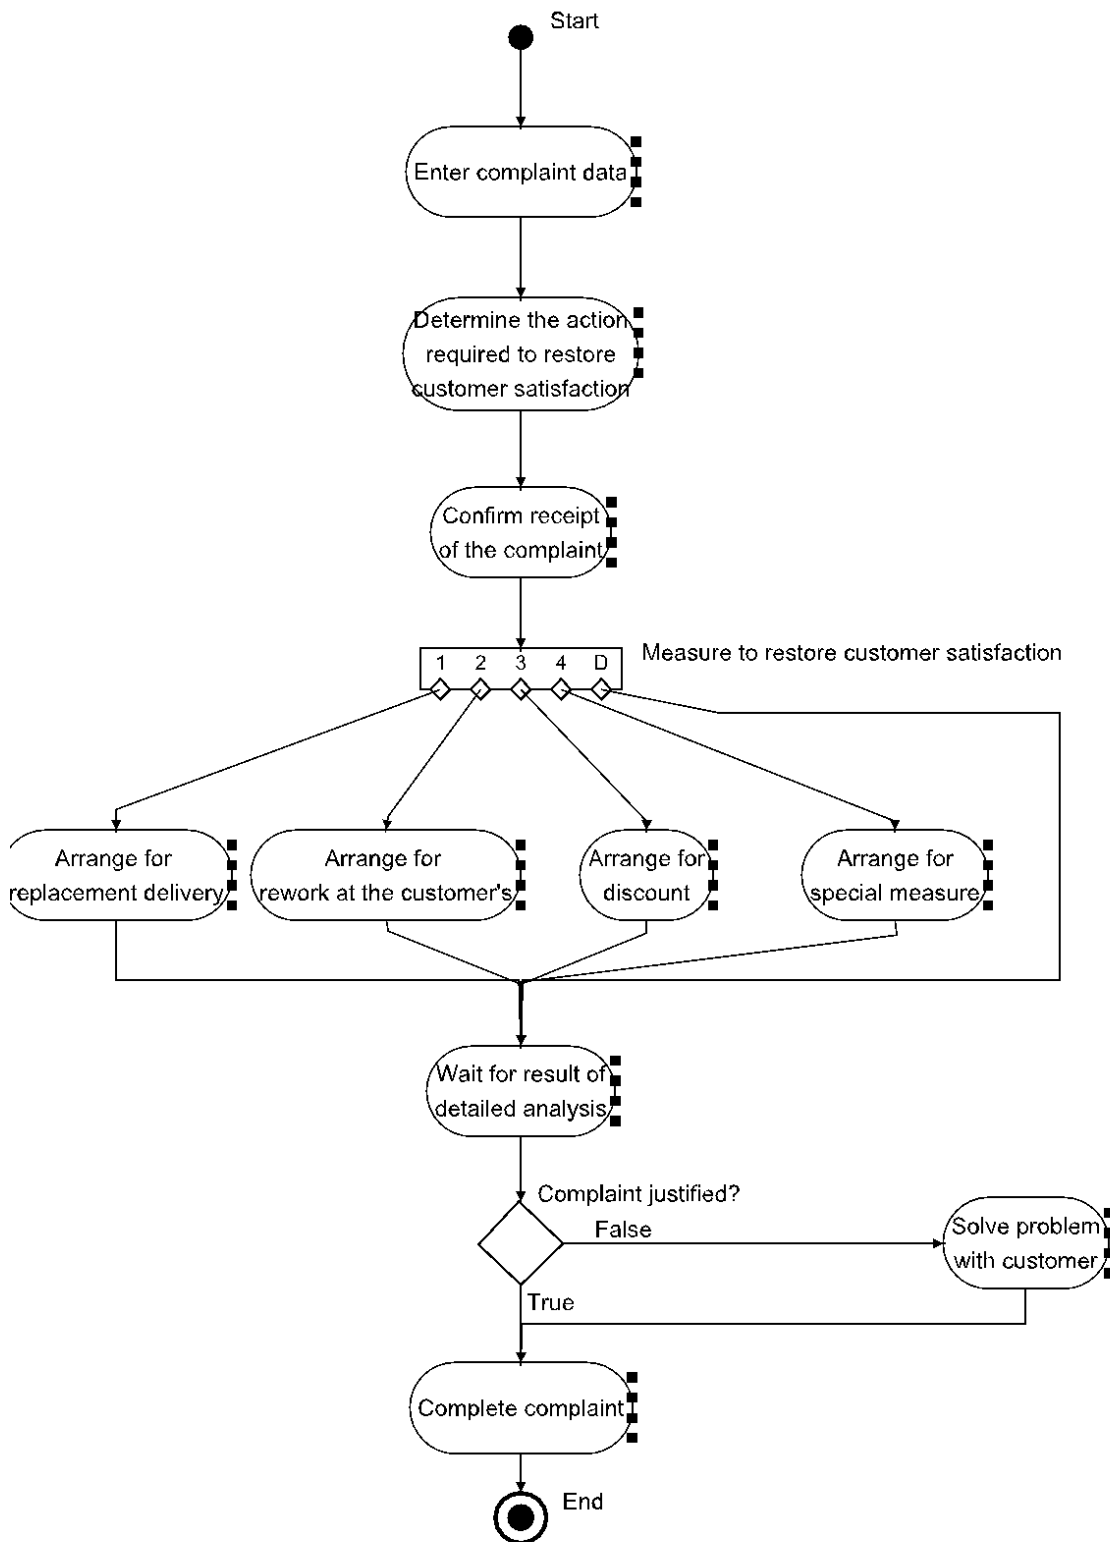

A workflow based on the process described here is instantiated when a complaint of the type "customer complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of customer complaints.

6.2 Process Chart

6.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on the basis of the responsible person defined in the associated complaint at that time.

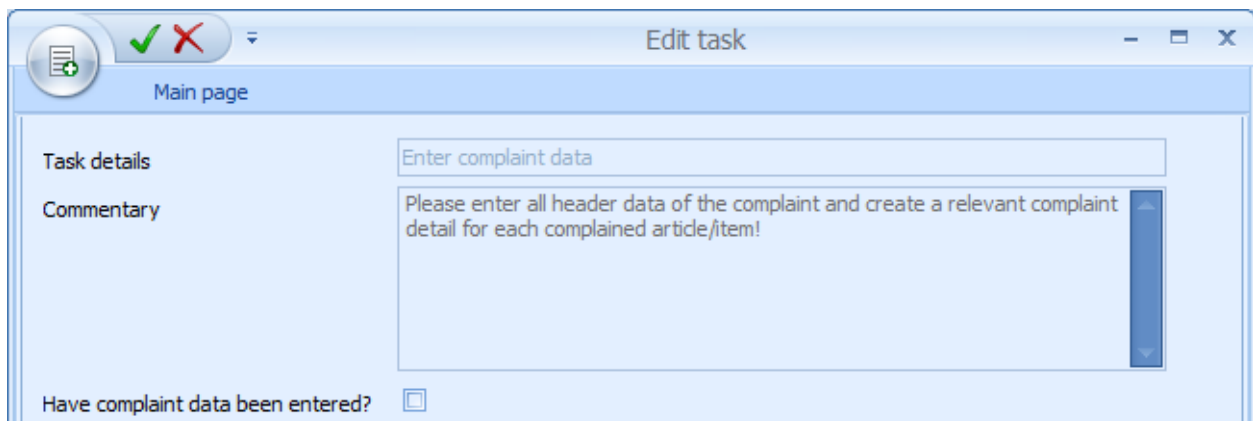

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

6.2.2 Process Step "Entry of complaint data"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

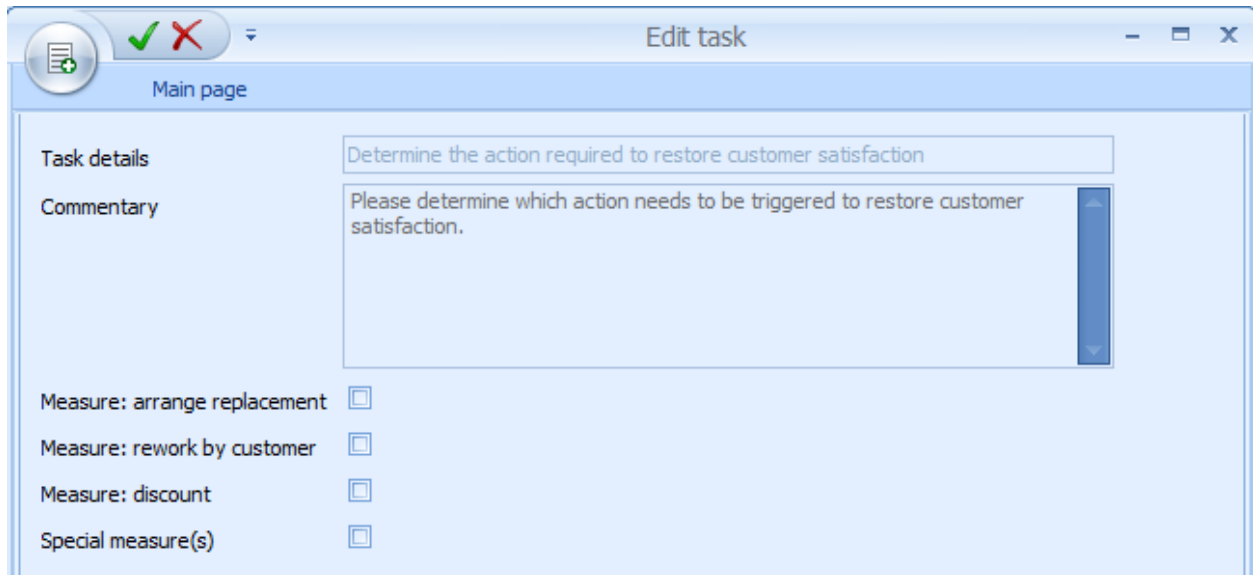

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have the complaint data been recorded?"

6.2.3 Process Step "Determination of measures aiming at customer satisfaction"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The originator of this process step must now define which tasks he/she intends to initiate to restore customer satisfaction. The tasks "Measure: Arrange replacement delivery"; "Measure: Rework at Customer Premises", "Measure: Discount" and "Special measure" are available.

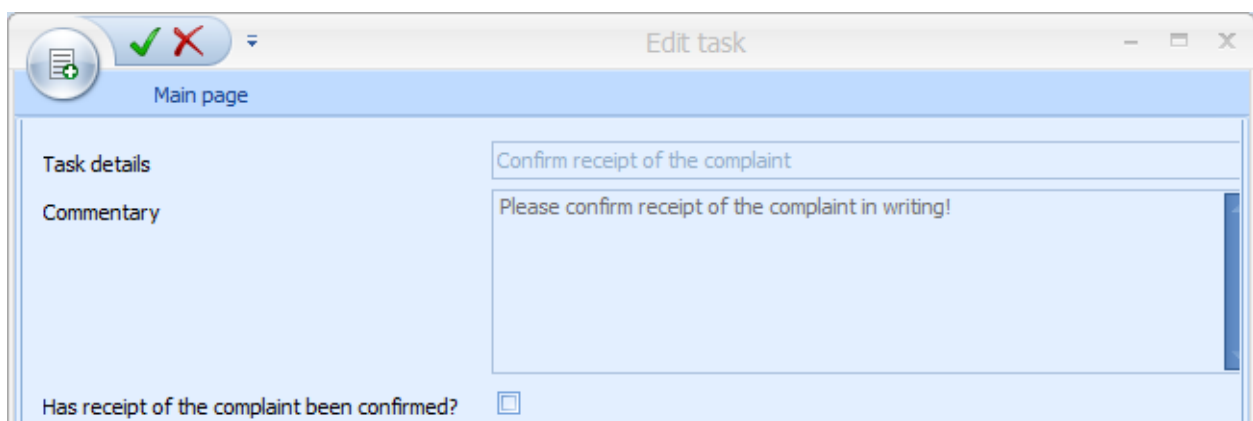

The screenshot shows a software window titled "Edit task". At the top, there is a toolbar with a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area containing the text "Determine the action required to restore customer satisfaction" and "Please determine which action needs to be triggered to restore customer satisfaction." Below this, there are four checkboxes with labels: "Measure: arrange replacement", "Measure: rework by customer", "Measure: discount", and "Special measure(s)".

At this point, the user may choose to select several different measures. However, the decision as to which direction the workflow process will continue is made on the basis of one measure.

The workflow is not continued until at least one of the measures has been selected.

6.2.4 Process Step "Confirm receipt of complaint"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". At the top, there is a toolbar with a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area containing the text "Confirm receipt of the complaint" and "Please confirm receipt of the complaint in writing!". At the bottom of the window, there is a checkbox labeled "Has receipt of the complaint been confirmed?".

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has receipt of the complaint been confirmed?"

6.2.5 Multiple Ramification "Customer satisfaction measure"

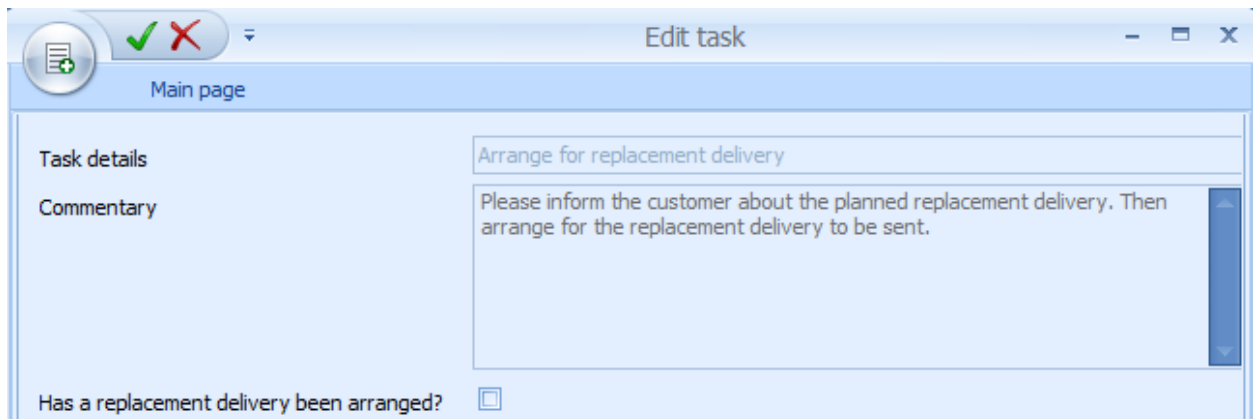

Based on the selected made in the process step "Determination of measures aiming at customer satisfaction", it is decided how the workflow is continued.

If several checkboxes were marked in the associated task, the system jumps to the first process step found in the following sequence:

- Measure: Arrange replacement delivery
- Measure: Rework at Customer Premises
- Measure: Discount
- Special measure

6.2.6 Process Step "Arrange replacement delivery"

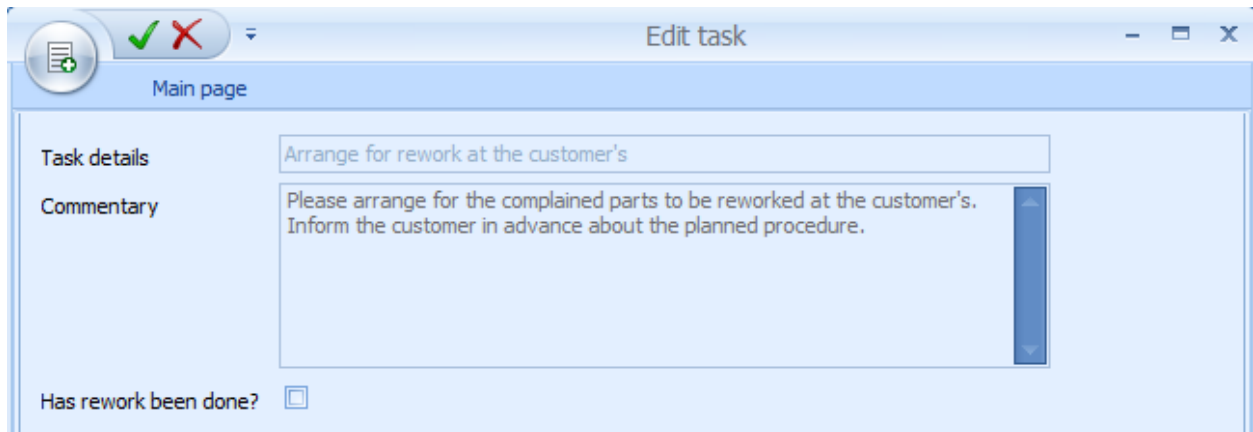

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has a replacement delivery been arranged?"

6.2.7 Process Step "Initiate rework at customer premises"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

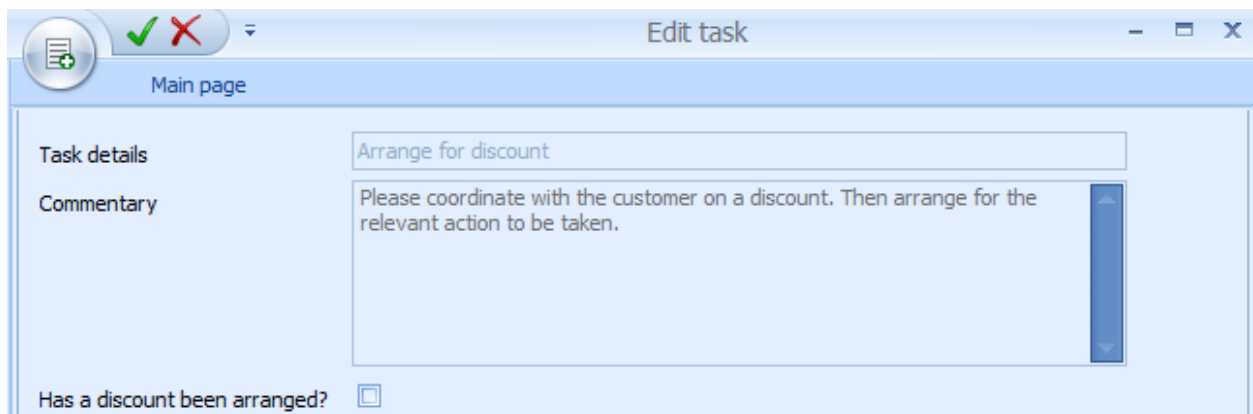

The screenshot shows a software window titled "Edit task". At the top left, there is a toolbar with a document icon, a green checkmark, and a red X. Below the toolbar is a "Main page" header. The window is divided into two main sections. The left section contains labels for "Task details" and "Commentary". The right section contains a text input field for the task name, which is "Arrange for rework at the customer's", and a larger text area for the commentary, which contains the text: "Please arrange for the complained parts to be reworked at the customer's. Inform the customer in advance about the planned procedure." At the bottom of the window, there is a checkbox labeled "Has rework been done?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has rework been carried out?"

6.2.8 Process Step "Arrange discount"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

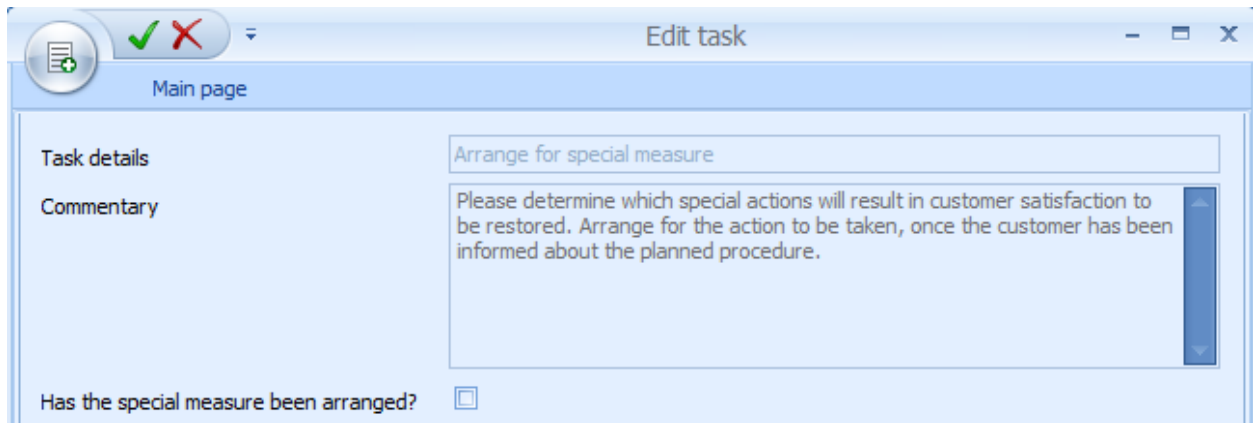

The screenshot shows a software window titled "Edit task". At the top left, there is a toolbar with a document icon, a green checkmark, and a red X. Below the toolbar is a "Main page" header. The window is divided into two main sections. The left section contains labels for "Task details" and "Commentary". The right section contains a text input field for the task name, which is "Arrange for discount", and a larger text area for the commentary, which contains the text: "Please coordinate with the customer on a discount. Then arrange for the relevant action to be taken." At the bottom of the window, there is a checkbox labeled "Has a discount been arranged?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has a discount been arranged?"

6.2.9 Process Step "Arrange special measures"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

Task details

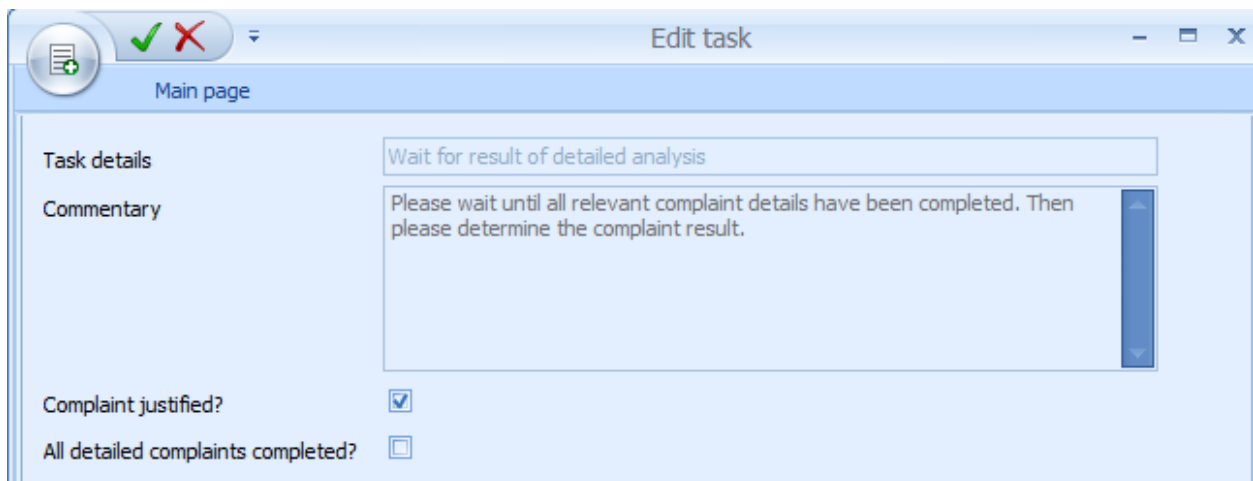

Commentary

Has the special measure been arranged? ☐

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the special measure been arranged?"

6.2.10 Process Step "Wait for detail analysis result"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

Task details

Commentary

Complaint justified? ☒

All detailed complaints completed? ☐

In accordance with the status of the "Complaint justified?" checkbox, a decision is made at the time of task completion as to whether commercial clarification with the customer is required.

The workflow is not continued until completion of this task has been documented by activating the checkbox "All detailed complaints completed?"

6.2.11 Ramification "Complaint justified"

In accordance with the selection in the "Complaint justified?" checkbox in the previous process step, either clarification with the customer is proposed or there is a ramification for verification of all data concerning complaint handling.

6.2.12 Process Step "Clarification with customer"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" section. On the right, there is a text area with the title "Solve problem with customer" and the content: "Please contact the customer to coordinate how to proceed with the unjustified complaint. Coordinate commercial processing and arrange for the relevant action to be taken." At the bottom of the window, there is a checkbox labeled "Has the problem been solved with the customer?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the problem been clarified with the customer?"

6.2.13 Process Step "Finish complaint"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" section. On the right, there is a text area with the title "Complete complaint" and the content: "Please verify that all input data (costs, measures, etc.) are complete and close the complaint if all data are complete. Inform the customer of this status change." At the bottom of the window, there is a checkbox labeled "Has the complaint been completed?" which is currently unchecked.

The workflow is finished when completion of this task has been documented by activating the checkbox "Has the complaint been completed?"

6.2.14 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

Workflow information

Main page

- Measure: arrange replacement ☐
- Measure: rework by customer ☐
- Measure: discount ☐
- Special measure(s) ☐
- Complaint justified? ☐

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

6.3 Integration

Upon creation of a customer complaint, an active entry of the object type `WFM_CONFIG` with parameter `Complaint_ComplaintType_KUNDE` is searched in the advanced object configuration of HYDRA.

The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaint_customer`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters may be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Contents
Module	COMPLAINT
Designation	Workflow for complaint
Process alias name	Complaint_ComplaintType_KUNDE
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of customer complaint
ID 2	Empty

ID 3	Empty
ID 4	Empty
ID 5	Empty
Key 1	Data type of customer complaint (default: REK)
Key 2	Area of customer complaint
Key 3	Empty
Key 4	Empty
Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of customer complaint>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber` and `var_HYDRA_reknr` can be used to generate the reference to the associated customer complaint directly.

7 Workflow - Internal Complaint

7.1 Usage

This is the description of the standard workflow process to be used for processing internal complaints.

The workflow is administered under the name `HYDRA_complaint_internal`.

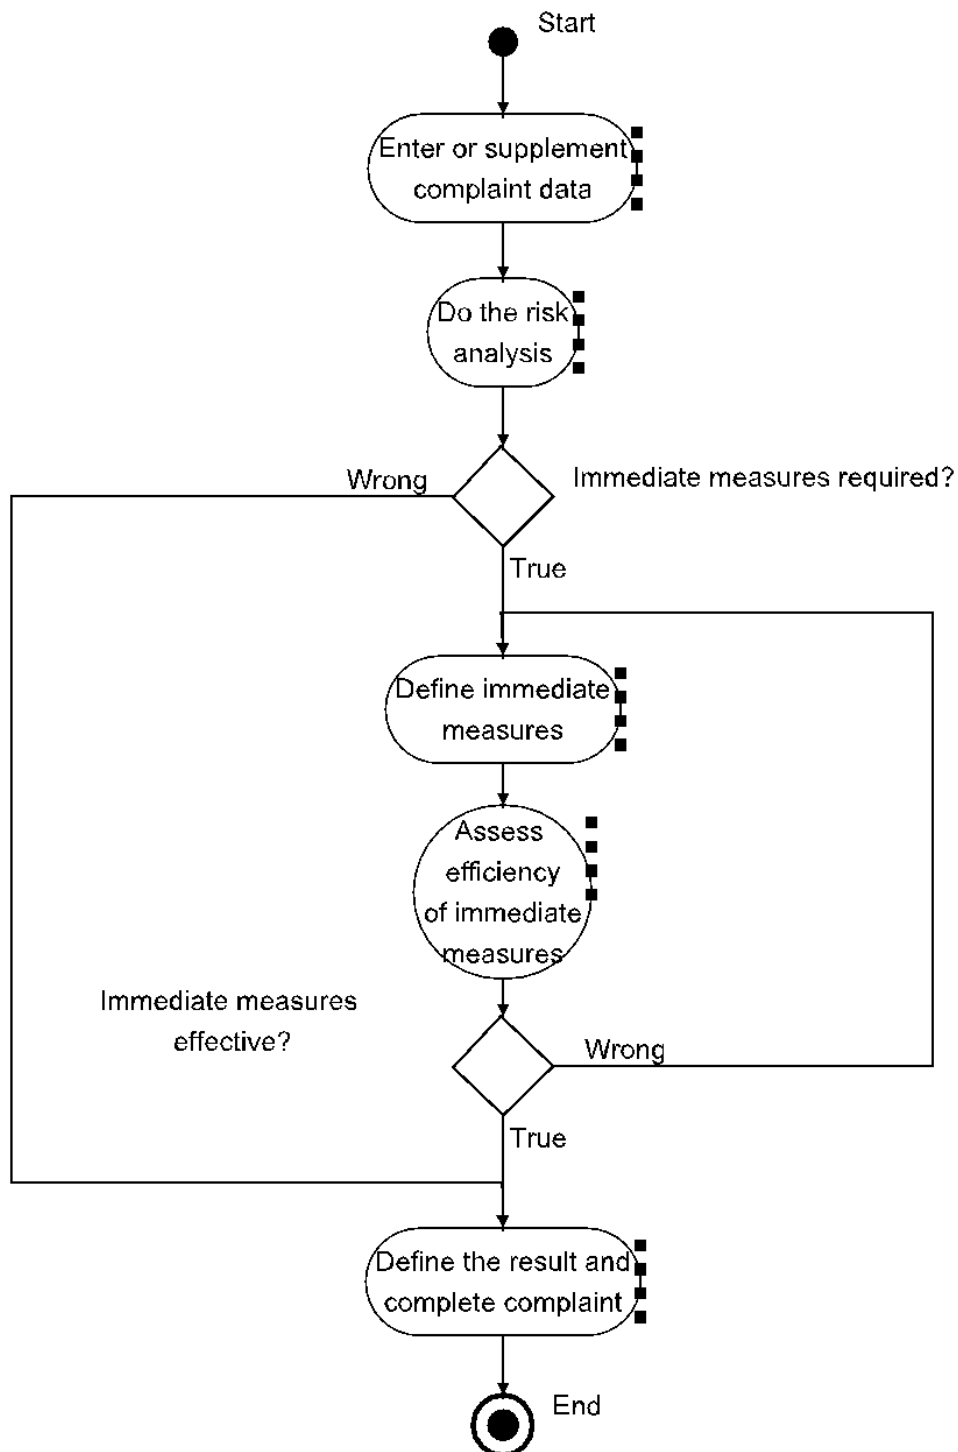

A workflow based on the process described here is instantiated when a complaint of the type "internal complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of internal complaints.

7.2 Process Chart

7.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on the basis of the responsible person defined in the associated complaint at that time.

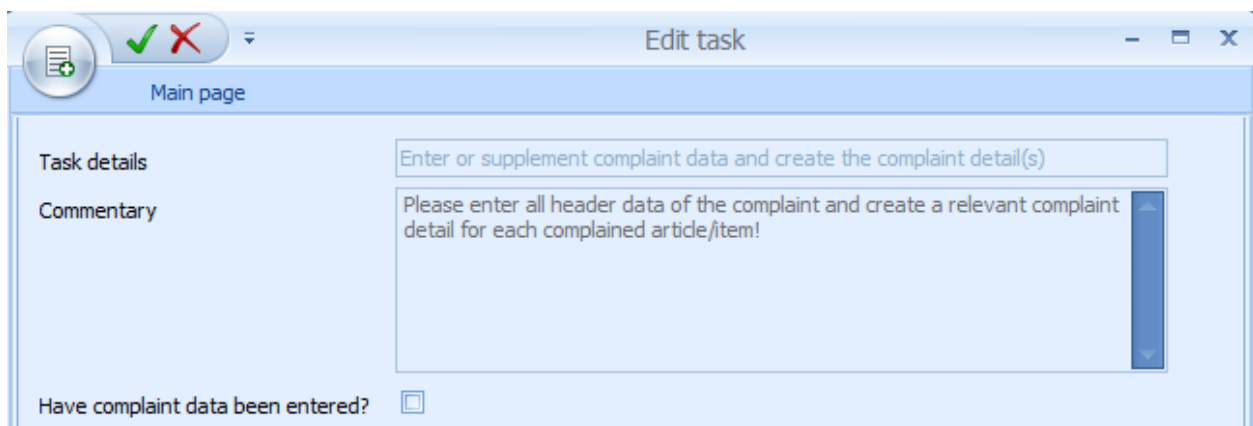

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

7.2.2 Process Step "Entry and/or completion of complaint data"

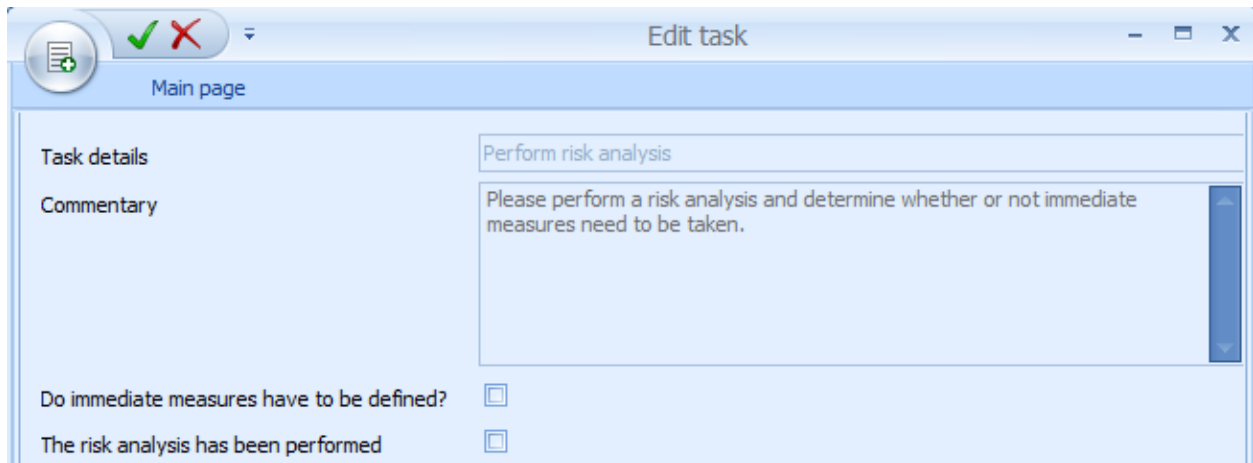

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have complaint data been entered?".

7.2.3 Process Step "Perform risk analysis"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text box with the title "Perform risk analysis". The "Commentary" section contains a text box with the text "Please perform a risk analysis and determine whether or not immediate measures need to be taken." Below these sections, there are two checkboxes: "Do immediate measures have to be defined?" and "The risk analysis has been performed". Both checkboxes are currently unchecked.

In accordance with the status of the checkbox "Do immediate measures have to be defined?", it is decided at the time of task completion whether to proceed in this regard or whether there is a ramification for determining the complaint findings.

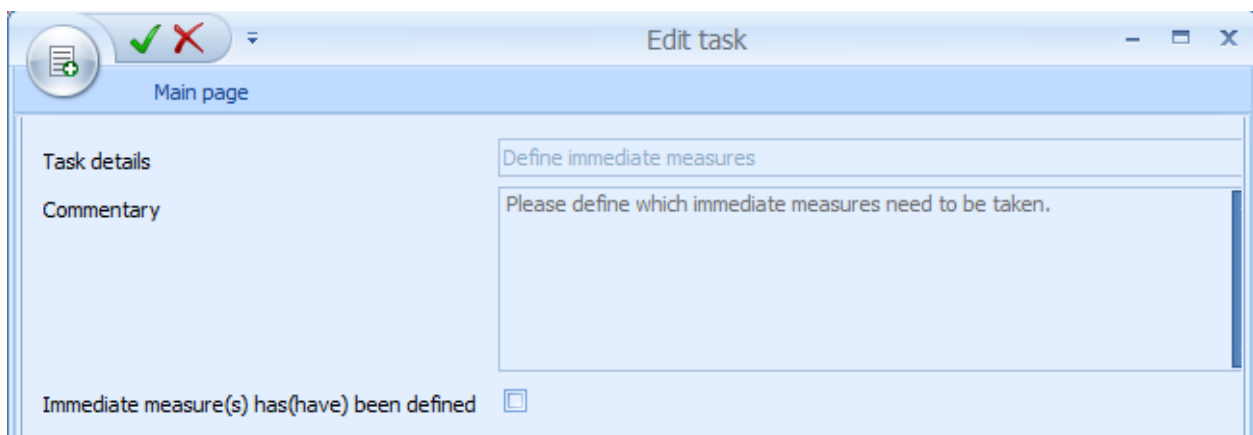

The workflow is not continued until completion of this task has been documented by activating the checkbox "The risk analysis has been performed".

7.2.4 Ramification "Immediate measures required?"

In accordance with the selection in the checkbox "Do immediate measures have to be defined?" in the previous process step, either clarification with the customer is proposed or there is a ramification for verification of all data concerning complaint handling.

7.2.5 Process Step "Define immediate measures"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text box with the title "Define immediate measures". The "Commentary" section contains a text box with the text "Please define which immediate measures need to be taken." Below these sections, there is a checkbox labeled "Immediate measure(s) has(have) been defined". This checkbox is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Immediate measure(s) has/have been defined".

7.2.6 Process Step "Determine effectiveness of immediate measures"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". The window has a blue header bar with a "Main page" link and a "Task details" section. The "Task details" section contains a "Commentary" field. The main content area is divided into two sections. The left section, titled "Task details", contains a "Commentary" field. The right section contains a text area with the title "Assess efficiency of immediate measures" and the text "Please decide whether or not the taken immediate measure was effective. If this is not the case, further measures need to be defined." Below the text area are two checkboxes: "Has the immediate measure been effective?" which is checked, and "Estimated effectiveness of measures" which is unchecked.

In accordance with the status of the checkbox "Has the immediate measure been effective?", it is decided at the time of task completion whether additional immediate measures are to be defined or whether there is a ramification for determining the complaint findings.

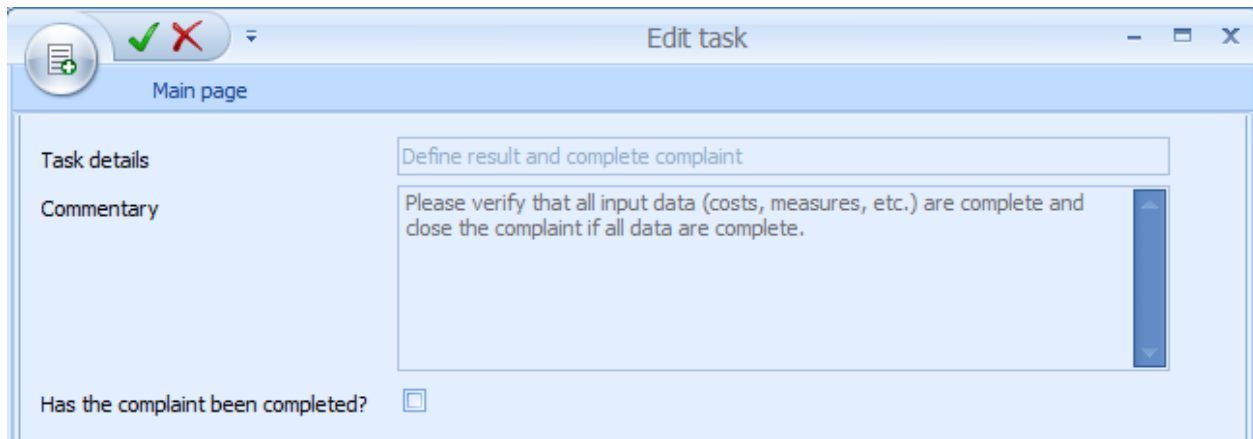

The workflow is not continued until completion of this task has been documented by activating the checkbox "Measure effectiveness assessed?".

7.2.7 Ramification "Immediate measures effective?"

In accordance with the selection in the checkbox "Has the immediate measure been effective?" in the previous process step, either you return to the definition of immediate measures or you proceed with a verification of all data concerning complaint handling.

7.2.8 Process Step "Determination of findings and completion"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

Task details

Commentary

Define result and complete complaint

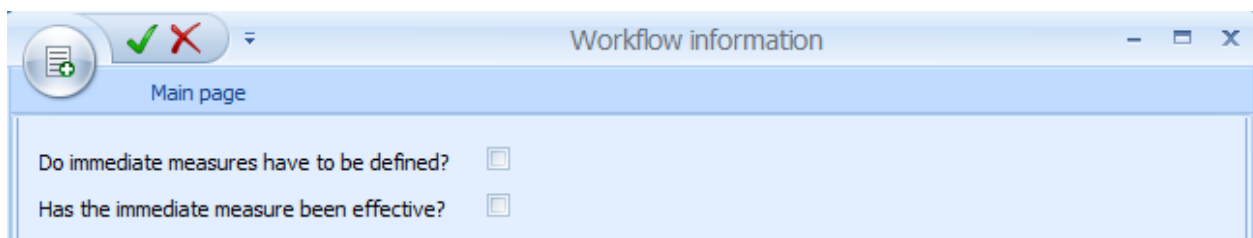

Please verify that all input data (costs, measures, etc.) are complete and close the complaint if all data are complete.

Has the complaint been completed? ☐

The workflow is finished when completion of this task has been documented by activating the checkbox "Has the complaint been completed?".

7.2.9 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

Do immediate measures have to be defined? ☐

Has the immediate measure been effective? ☐

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

7.3 Integration

Upon creation of an internal complaint, an active entry of the object type `WFM_CONFIG` with parameter `Complaint_ComplaintType_INTERN` is searched in the advanced object configuration of HYDRA. The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaint_internal`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters can be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Contents
Module	COMPLAINT
Designation	Workflow for complaint
Process alias name	Complaint_ComplaintType_INTERN
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of internal complaint
ID 2	Empty
ID 3	Empty
ID 4	Empty
ID 5	Empty
Key 1	Data type of internal complaint (default: REK)
Key 2	Area of internal complaint
Key 3	Empty
Key 4	Empty

Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of customer complaint>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber` and `var_HYDRA_reknr` may be used to generate the reference to the associated internal complaint directly.

8 Workflow - Supplier Complaint

8.1 Usage

This is the description of the standard workflow process to be used for processing supplier complaints.

The workflow is administered under the name `HYDRA_complaint_customer`.

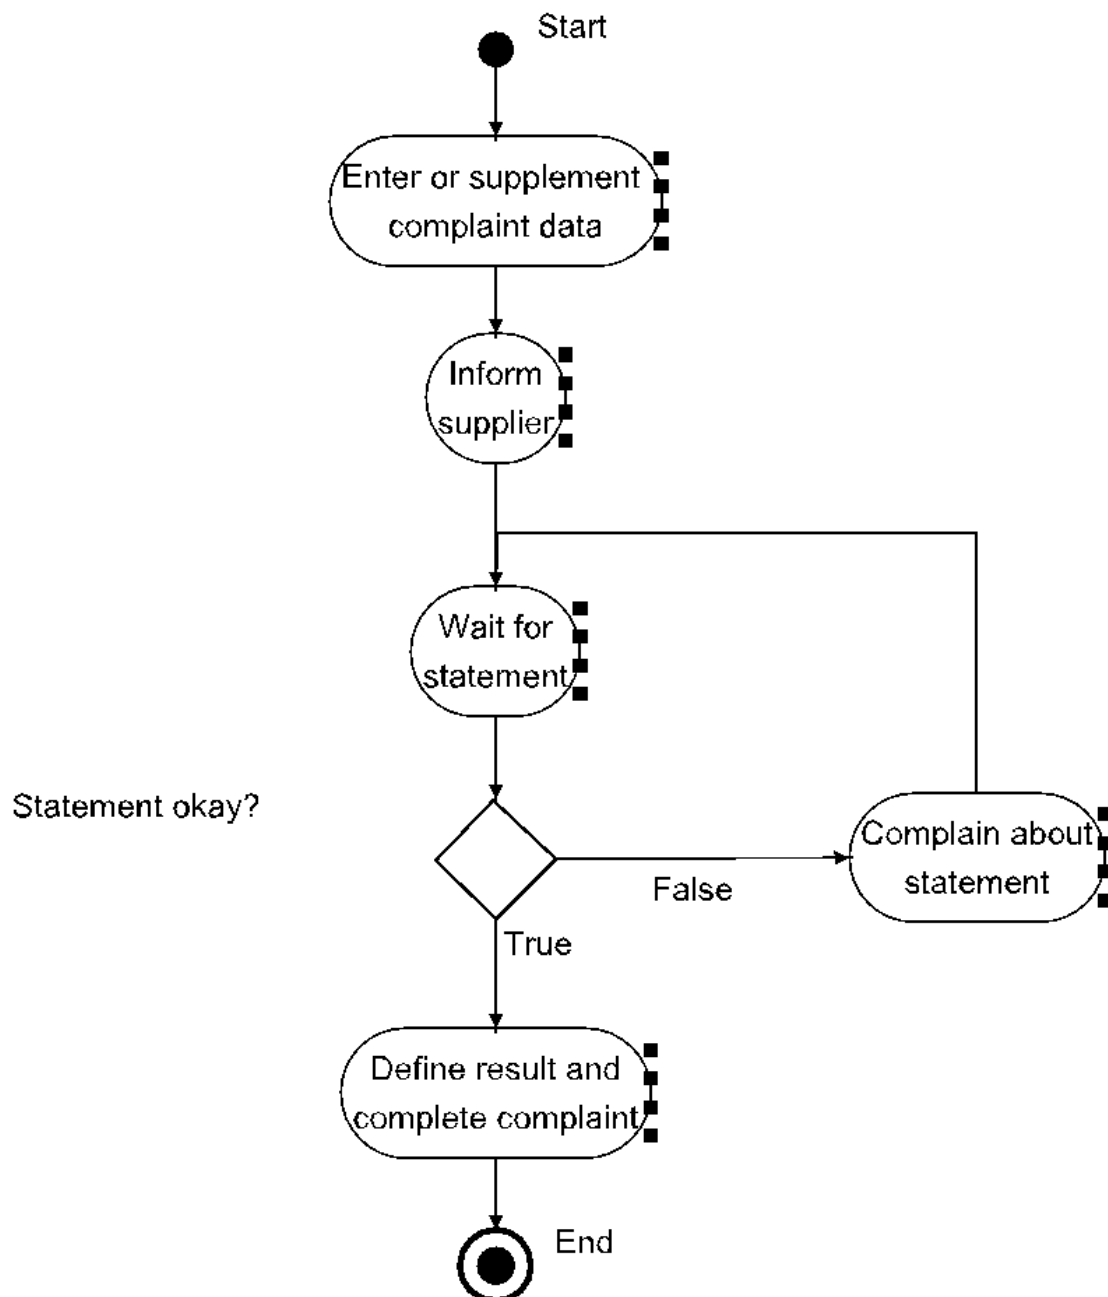

A workflow based on the process described here is instantiated when a complaint of the type "supplier complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of supplier complaints.

8.2 Process

8.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on the basis of the responsible person defined in the associated complaint at that time.

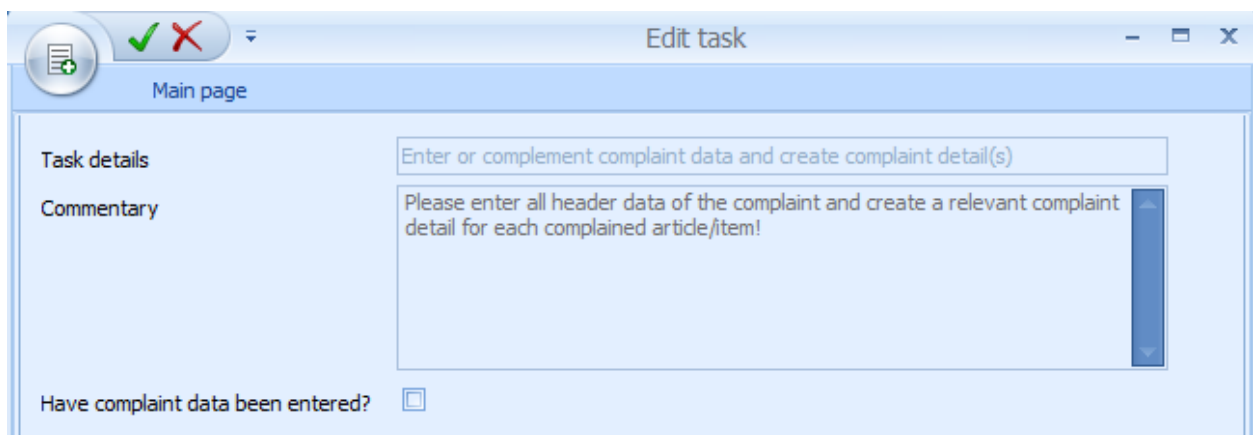

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

8.2.2 Process Step "Entry and/or completion of complaint data"

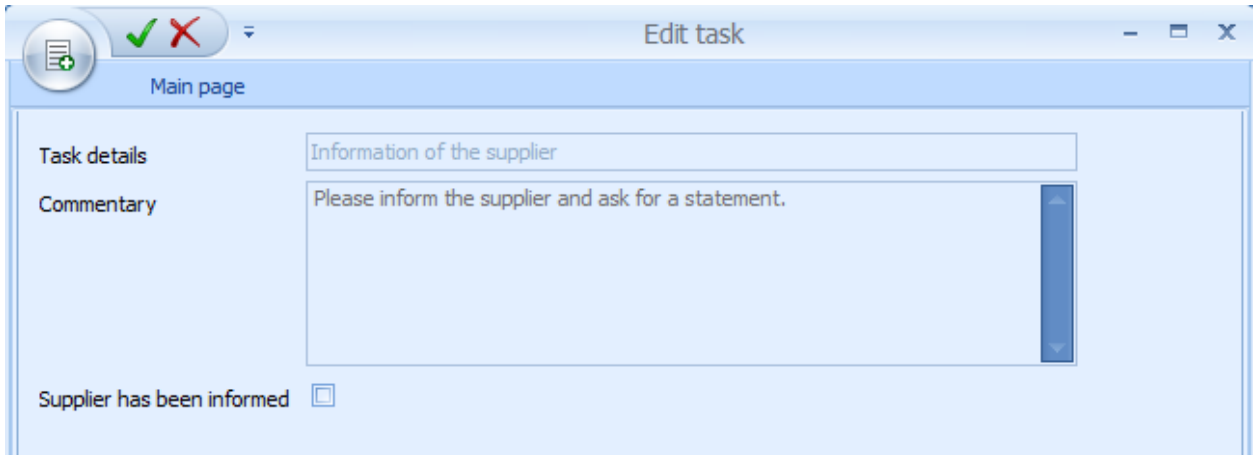

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have complaint data been entered?".

8.2.3 Process Step "Notification of supplier"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

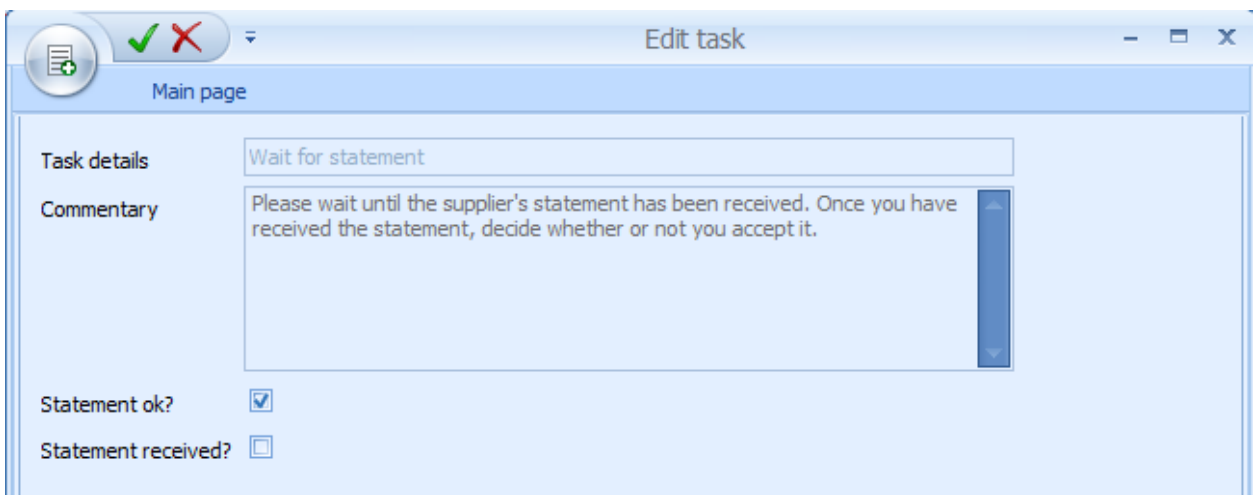

The screenshot shows a software window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a tab labeled "Main page". The window is divided into two main sections. The left section contains labels for "Task details" and "Commentary". The right section contains a text input field for "Task details" with the value "Information of the supplier" and a larger text area for "Commentary" containing the text "Please inform the supplier and ask for a statement.". Below the text area is a checkbox labeled "Supplier has been informed" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Supplier has been informed".

8.2.4 Process Step "Waiting for statement"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows the same "Edit task" window. The "Task details" field now contains "Wait for statement". The "Commentary" text area contains "Please wait until the supplier's statement has been received. Once you have received the statement, decide whether or not you accept it.". Below the text area are two checkboxes: "Statement ok?" which is checked (indicated by a blue checkmark in the box), and "Statement received?" which is unchecked.

In accordance with the status of the "Statement o.k.?" checkbox, it is decided at the time of task completion whether the statement of the supplier is to be opposed and a new statement requested, or whether there is a ramification for determining the complaint finding.

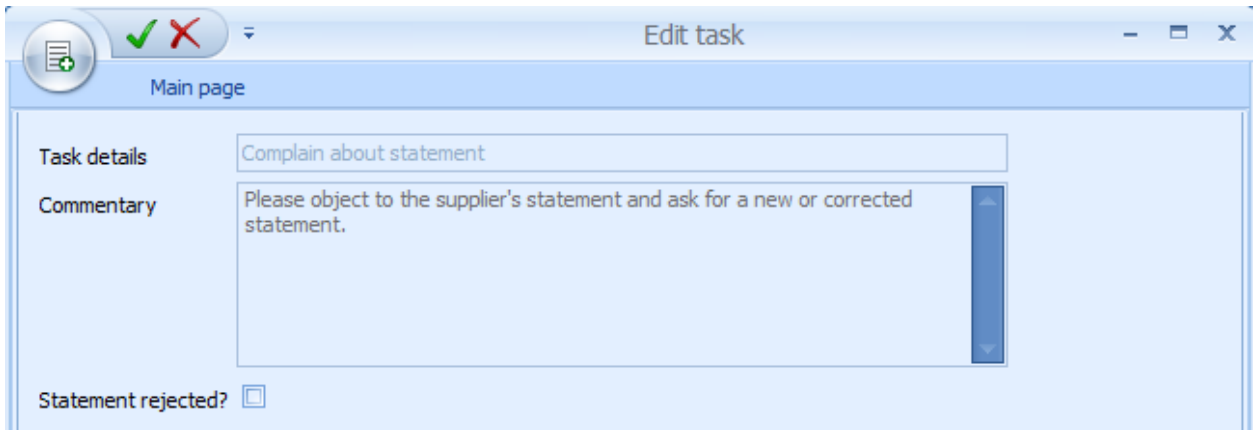

The workflow is not continued until completion of this task has been documented by activating the "Statement received" checkbox.

8.2.5 Ramification "Statement o.k.?"

In accordance with the selection in the "Statement O.K.?" checkbox in the previous process step, the statement of the supplier is either opposed or verification of all data concerning complaint handling follows.

8.2.6 Process Step "Oppose statement"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

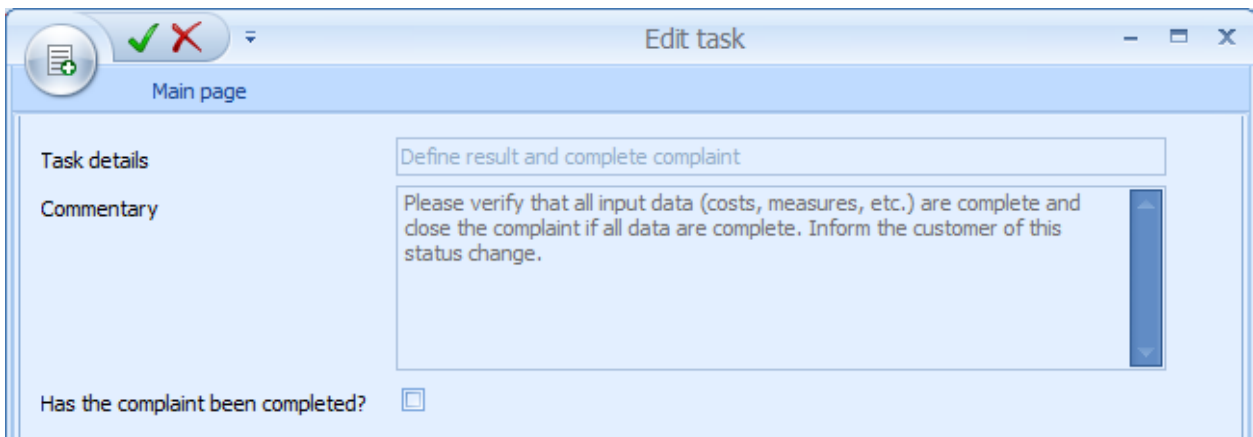

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the value "Complain about statement". The "Commentary" section contains a text area with the text "Please object to the supplier's statement and ask for a new or corrected statement." Below these sections is a checkbox labeled "Statement rejected?" which is currently unchecked.

The workflow is finished when completion of this task has been documented by activating the "Statement opposed?" checkbox.

8.2.7 Process Step "Determination of finding and completion"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

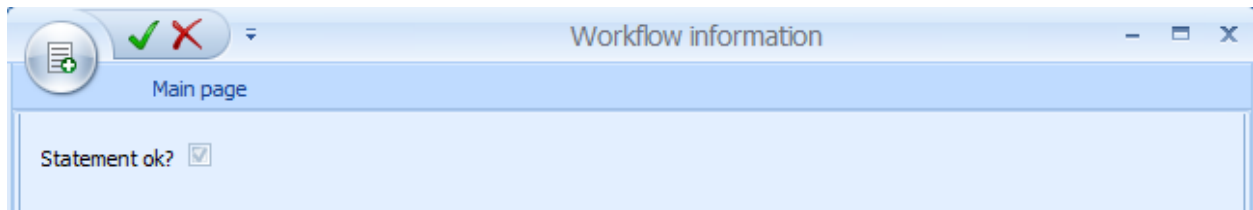

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the value "Define result and complete complaint". The "Commentary" section contains a text area with the text "Please verify that all input data (costs, measures, etc.) are complete and close the complaint if all data are complete. Inform the customer of this status change." Below these sections is a checkbox labeled "Has the complaint been completed?" which is currently unchecked.

The workflow is finished when completion of this task has been documented by activating the checkbox "Has the complaint been completed?".

8.2.8 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

8.3 Integration

Upon creation of a supplier complaint, an active entry of the object type `WFM_CONFIG` with parameter `Complaint_ComplaintType_LIEFERANT` is searched in the advanced object configuration of HYDRA.

The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaint_supplier`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters can be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Content
Module	COMPLAINT
Designation	Workflow for complaint
Process alias name	Complaint_ComplaintType_LIEFERANT
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of supplier complaint
ID 2	Empty
ID 3	Empty
ID 4	Empty

ID 5	Empty
Key 1	Data type of supplier complaint (default: REK)
Key 2	Area of supplier complaint
Key 3	Empty
Key 4	Empty
Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of customer complaint>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber` and `var_HYDRA_reknr` may be used to generate the reference to the associated supplier complaint directly.

9 Workflow - Customer Complaint Detail

9.1 Usage

This is the description of the standard workflow process to be used for processing customer complaint details.

The workflow is administered under the name `HYDRA_complaintdetail_customer`.

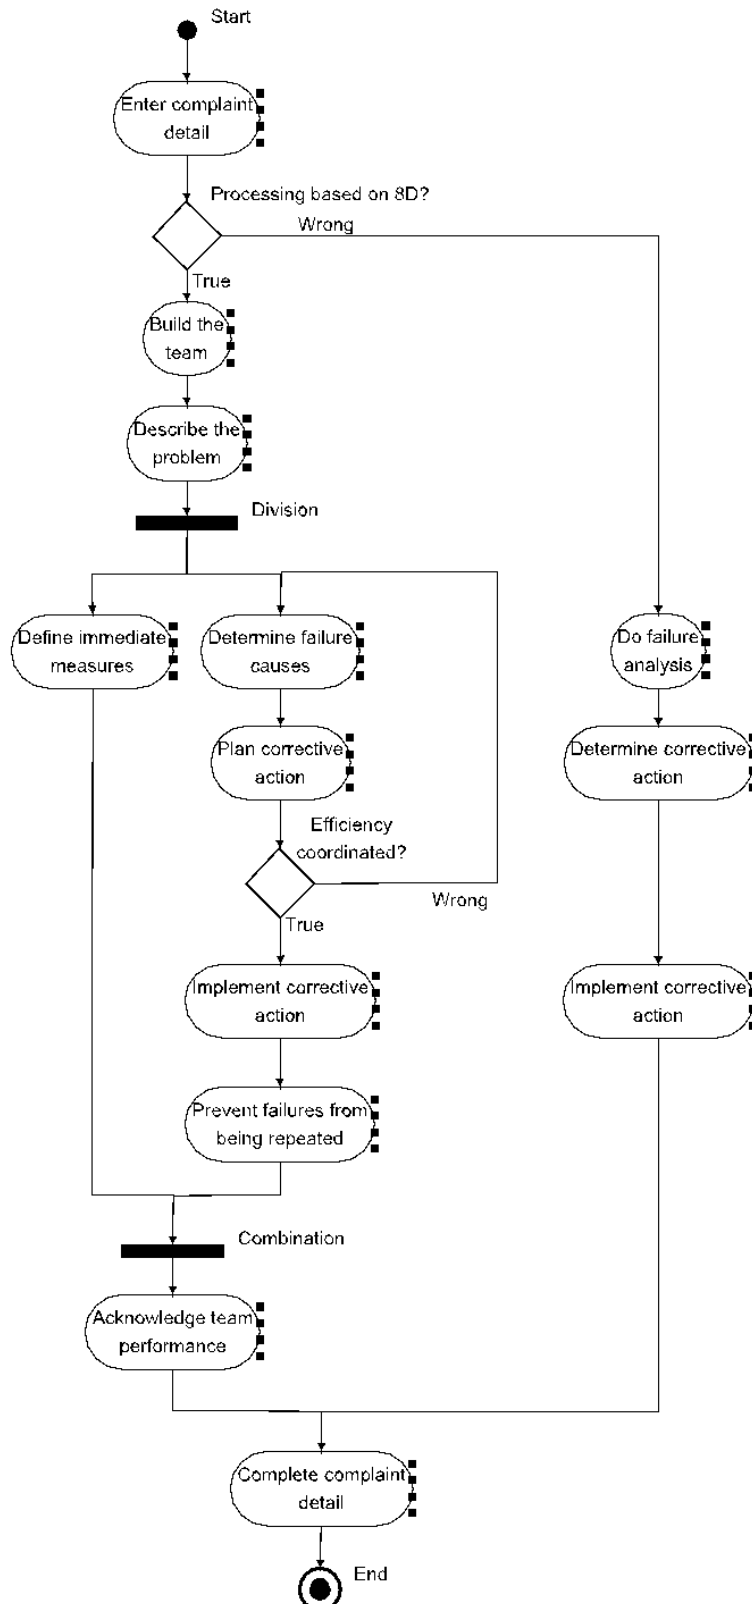

A workflow based on the process described here is instantiated when a complaint detail for a complaint of the type "customer complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of customer complaint details.

9.2 Process Chart

9.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on the basis of the responsible person defined in the associated complaint detail at that time.

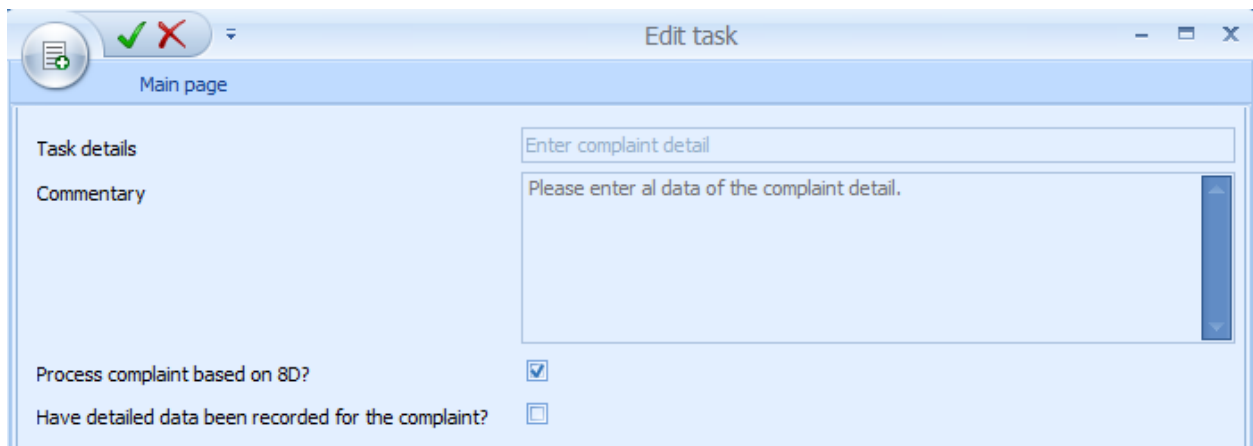

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint detail in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint detail, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

9.2.2 Process Step "Entry of complaint detail"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

In accordance with the status of the checkbox "Process complaint based on 8D?", it is decided at the time of task completion whether the complaint detail is to be handled according to 8D or in a simplified manner.

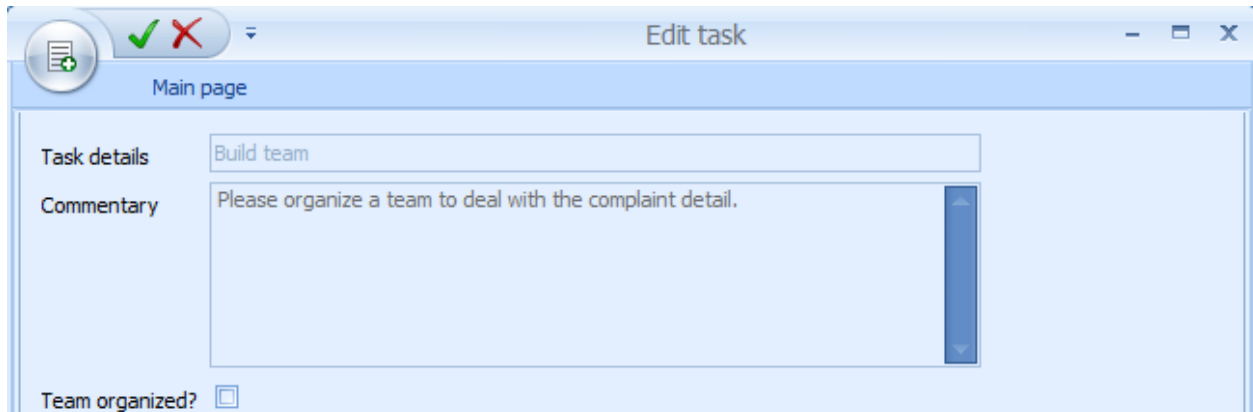

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have the complaint detail data been entered?".

9.2.3 Ramification "Evaluation according to 8D?"

In accordance with the selection in the checkbox "Process complaint based on 8D?" in the previous process step, there is a ramification for evaluation according to 8D or a simplified manner.

9.2.4 Process Step "Organization of team"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

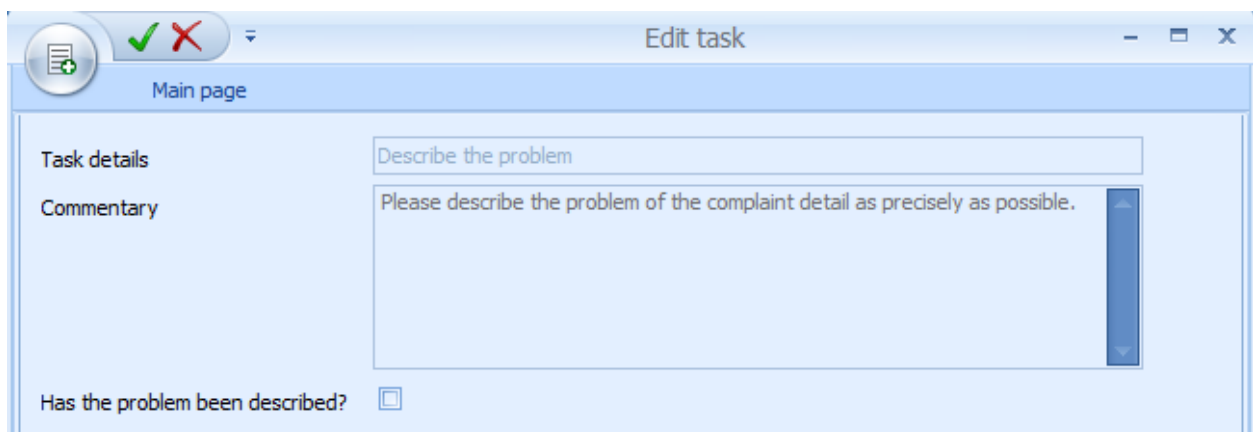

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the value "Build team". The "Commentary" section contains a text area with the text "Please organize a team to deal with the complaint detail." and a vertical scrollbar on the right. At the bottom of the window, there is a checkbox labeled "Team organized?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the "Team organized?" checkbox.

9.2.5 Process Step "Problem description"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the value "Describe the problem". The "Commentary" section contains a text area with the text "Please describe the problem of the complaint detail as precisely as possible." and a vertical scrollbar on the right. At the bottom of the window, there is a checkbox labeled "Has the problem been described?" which is currently unchecked.

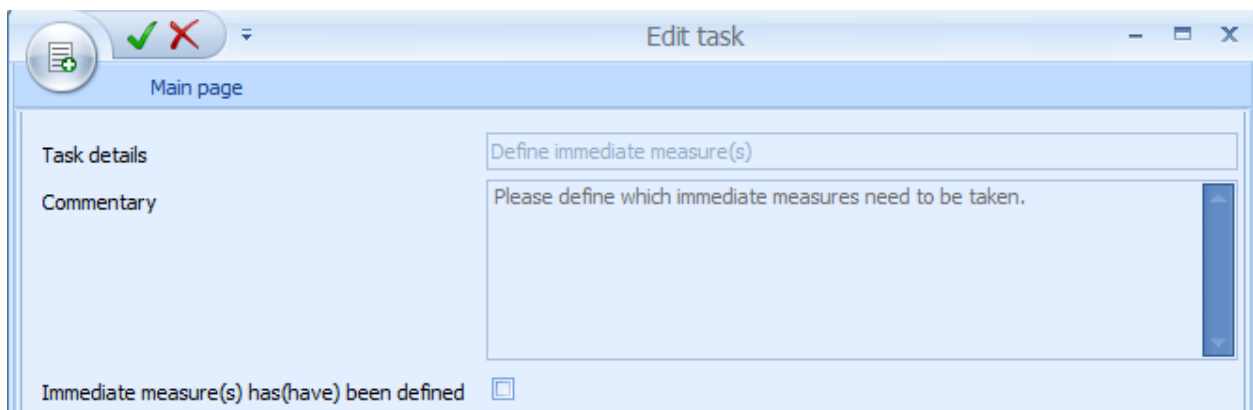

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the problem been described?".

9.2.6 Distribution

At this point, workflow processing is split into two parallel processes. One is about determining immediate measures. The other one is about researching the cause of the fault and the subsequent implementation of remedial action.

9.2.7 Process Step "Determine immediate measures"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

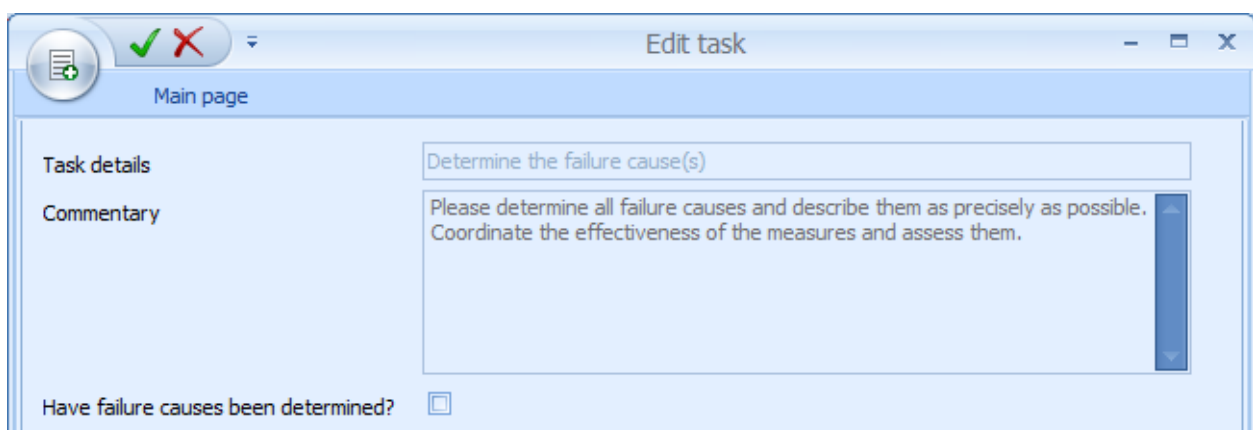

The screenshot shows a software window titled "Edit task". At the top left, there are icons for a document with a plus sign, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area with the heading "Define immediate measure(s)" and the instruction "Please define which immediate measures need to be taken." At the bottom of the window, there is a checkbox labeled "Immediate measure(s) has(have) been defined".

The workflow is not continued until completion of this task has been documented by activating the checkbox "Immediate measure(s) has/have been defined".

9.2.8 Process Step "Determine failure causes"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

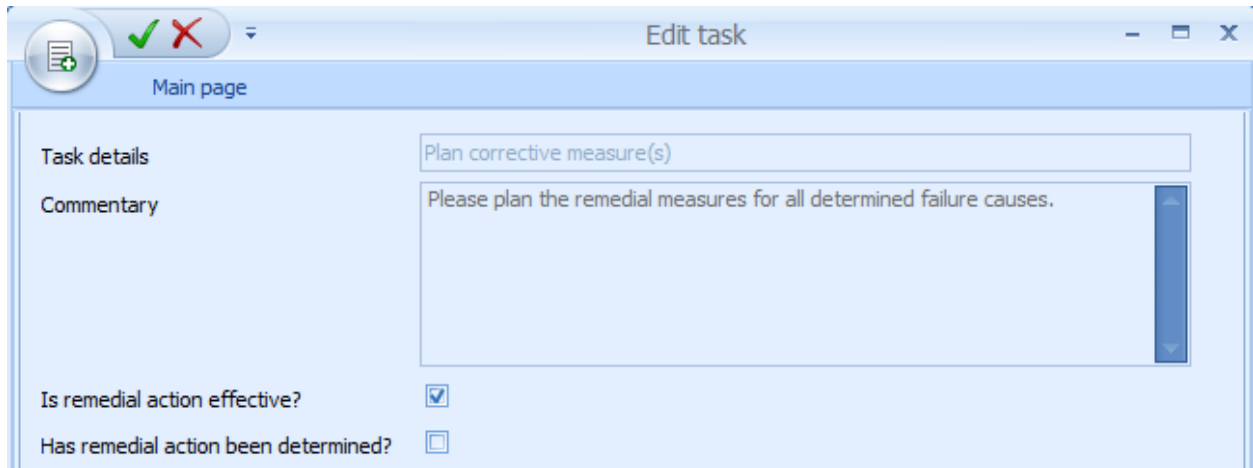

The screenshot shows a software window titled "Edit task". At the top left, there are icons for a document with a plus sign, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area with the heading "Determine the failure cause(s)" and the instruction "Please determine all failure causes and describe them as precisely as possible. Coordinate the effectiveness of the measures and assess them." At the bottom of the window, there is a checkbox labeled "Have failure causes been determined?".

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have failure causes been determined?".

9.2.9 Process Step "Planning of remedial action"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". The window has a blue header bar with a "Main page" label. Below the header, there is a "Task details" section with a text input field labeled "Plan corrective measure(s)". To the right of this field is a "Commentary" section with a text area containing the text "Please plan the remedial measures for all determined failure causes." Below the text area, there are two checkboxes: "Is remedial action effective?" which is checked, and "Has remedial action been determined?" which is unchecked.

In accordance with the status of the checkbox "Is the remedial action effective?", it is decided at the time of task completion whether to return to determining the cause of the fault.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has remedial action been determined?".

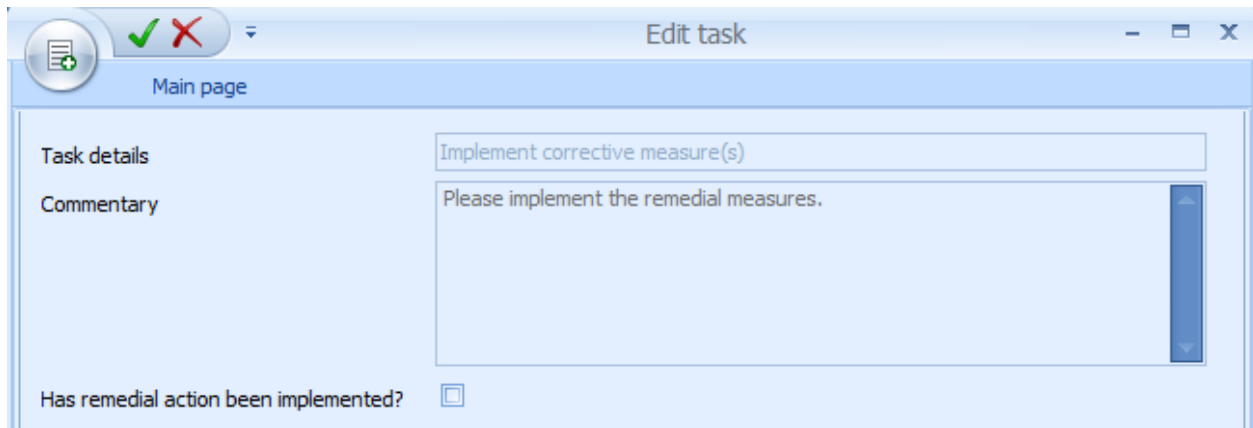

9.2.10 Ramification "Effectiveness agreed?"

If remedial action was not considered effective in the previous process step, you return to the process step "Determine failure causes".

In the other case, workflow processing is continued at the process step "Implementation of remedial action".

9.2.11 Process Step "Implementation of remedial action" (on the left)

Activating this process step will create a task. The recipient of the task is notified by e-mail.

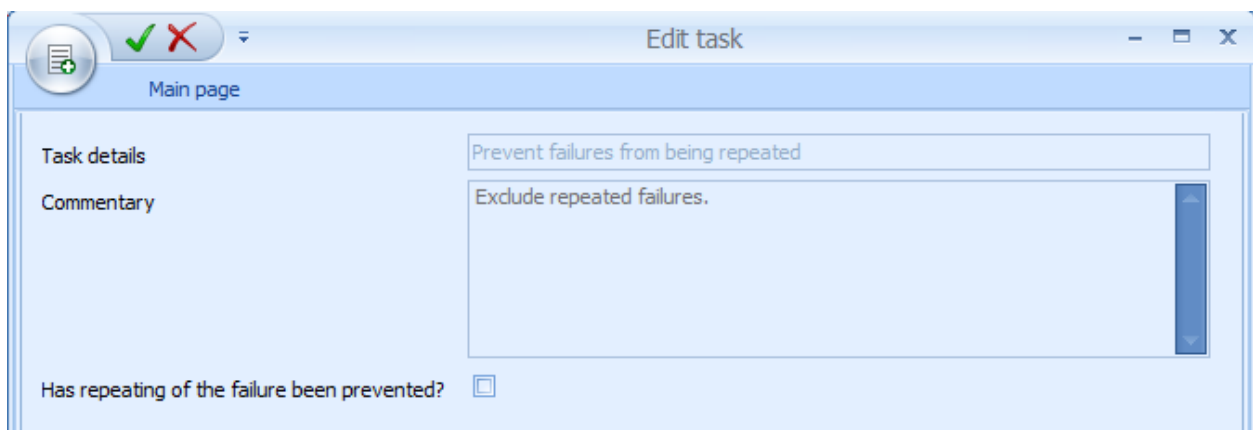

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the placeholder text "Implement corrective measure(s)". The "Commentary" section contains a text area with the text "Please implement the remedial measures." and a vertical scrollbar on the right. At the bottom of the window, there is a checkbox labeled "Has remedial action been implemented?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has remedial action been implemented?".

9.2.12 Process Step "Prevent failure repetition"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the placeholder text "Prevent failures from being repeated". The "Commentary" section contains a text area with the text "Exclude repeated failures." and a vertical scrollbar on the right. At the bottom of the window, there is a checkbox labeled "Has repeating of the failure been prevented?" which is currently unchecked.

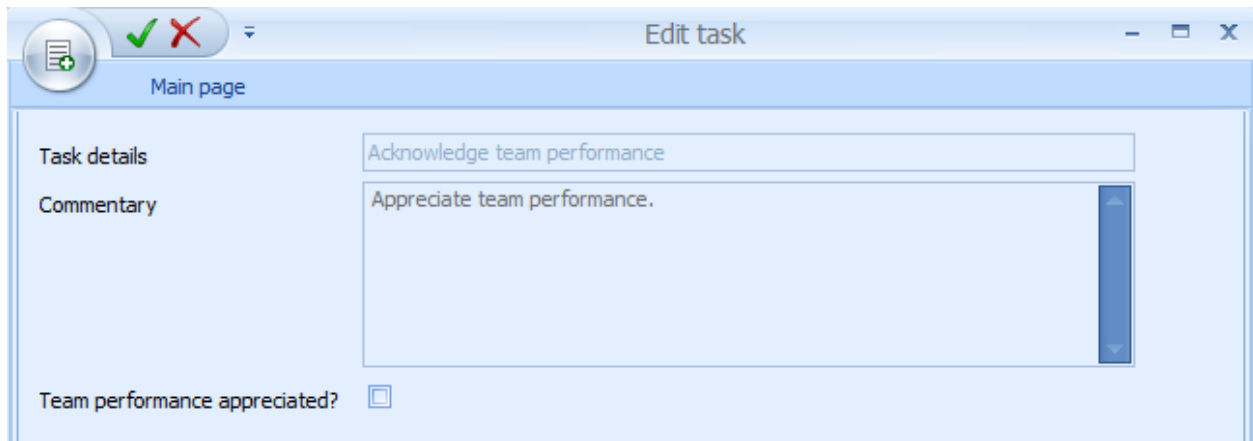

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has a repetition of the failure been prevented?".

9.2.13 Consolidation

At this point the system waits until processing of both paths is completed. Processing will then continue at the process step "Acknowledgment of team performance".

9.2.14 Process Step "Acknowledgment of team performance"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

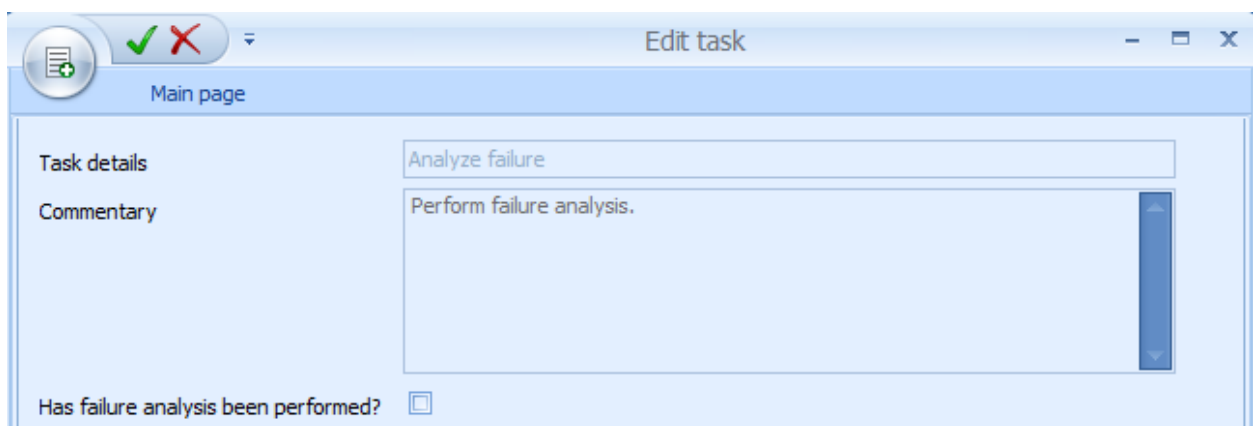

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a document, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, there are labels "Task details" and "Commentary". On the right, there is a text input field containing "Acknowledge team performance" and a larger text area containing "Appreciate team performance." with a vertical scrollbar. At the bottom left, there is a checkbox labeled "Team performance appreciated?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Team performance acknowledged?".

9.2.15 Process Step "Perform failure analysis"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

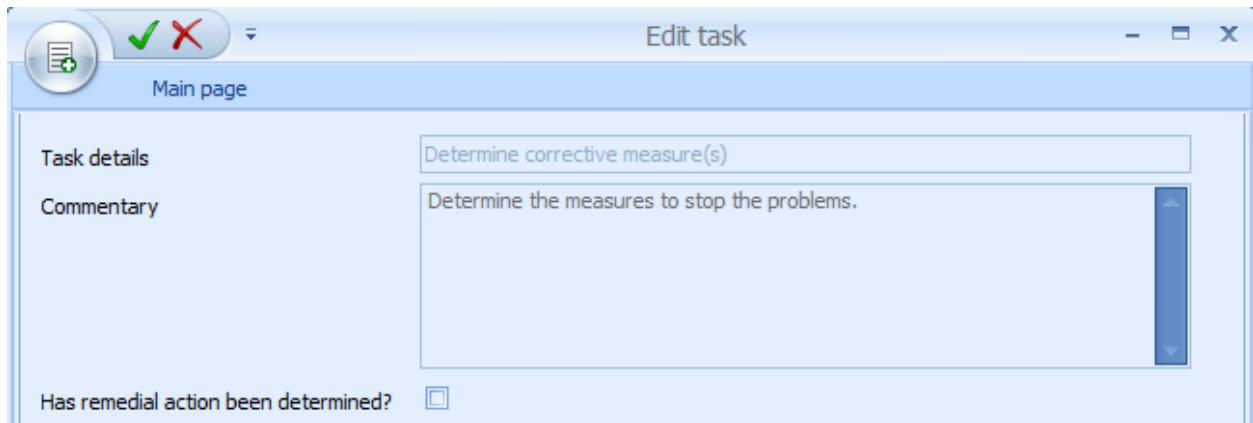

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a document, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, there are labels "Task details" and "Commentary". On the right, there is a text input field containing "Analyze failure" and a larger text area containing "Perform failure analysis." with a vertical scrollbar. At the bottom left, there is a checkbox labeled "Has failure analysis been performed?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has failure analysis been performed?".

9.2.16 Process Step "Determination of remedial action"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

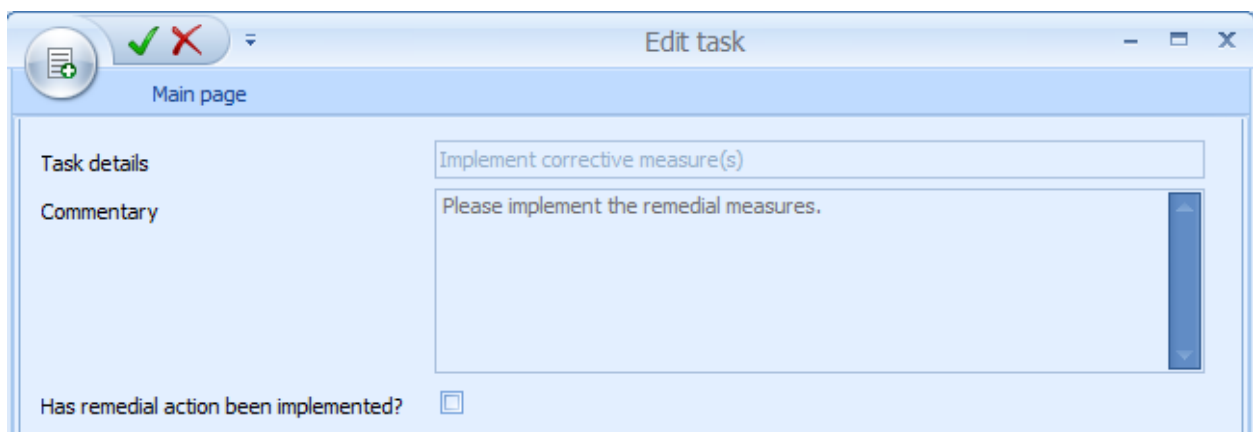

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the placeholder text "Determine corrective measure(s)". The "Commentary" section contains a text area with the text "Determine the measures to stop the problems." and a vertical scrollbar on the right. At the bottom of the window, there is a checkbox labeled "Has remedial action been determined?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has remedial action been determined?".

9.2.17 Process Step "Implementation of remedial action" (on the right)

Activating this process step will create a task. The recipient of the task is notified by e-mail.

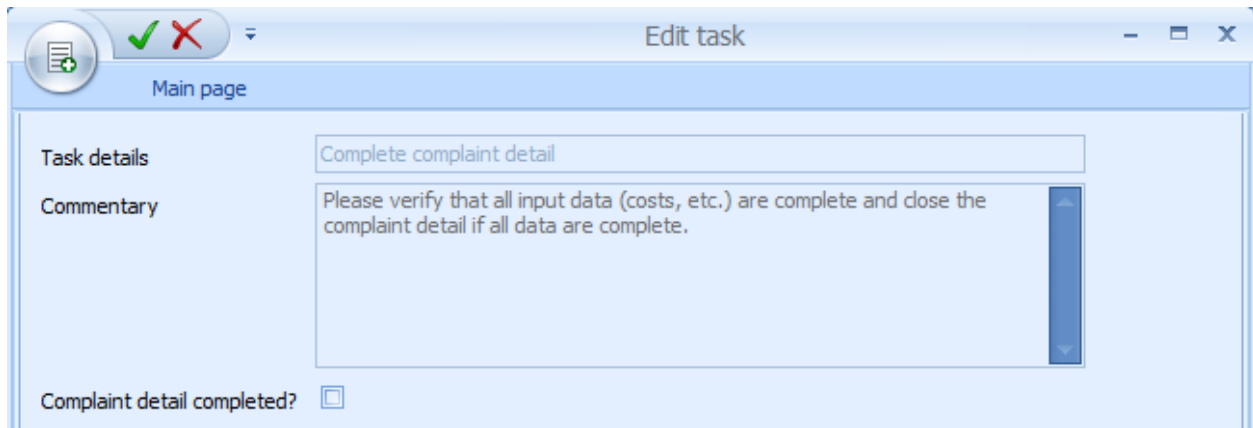

The screenshot shows a web application window titled "Edit task". At the top, there is a toolbar with a document icon, a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the placeholder text "Implement corrective measure(s)". The "Commentary" section contains a text area with the text "Please implement the remedial measures." and a vertical scrollbar on the right. At the bottom of the window, there is a checkbox labeled "Has remedial action been implemented?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has remedial action been implemented?".

9.2.18 Process Step "Complete complaint detail"

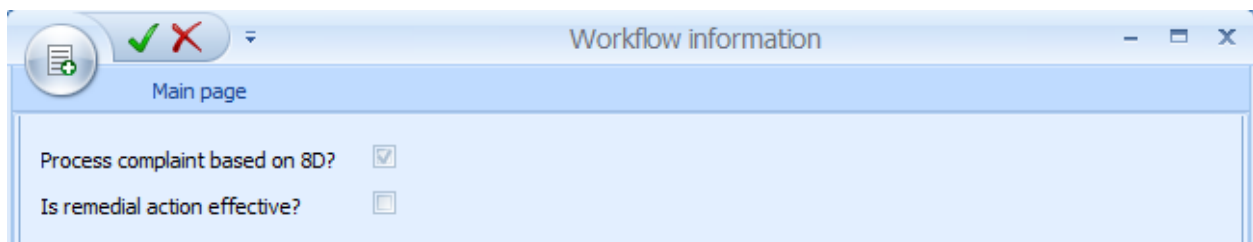

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the complaint detail been completed?".

9.2.19 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

9.3 Integration

Upon creation of a customer complaint detail, an active entry of the object type `WFM_CONFIG` with parameter `ComplaintDetail_ComplaintType_KUNDE` is searched in the advanced object configuration of HYDRA.

The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaintdetail_customer`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters can be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Content
Module	COMPLAINTDETAIL
Designation	Workflow for complaintdetail
Process alias name	ComplaintDetail_ComplaintType_KUNDE
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of customer complaint
ID 2	Number of complaint detail
ID 3	Empty
ID 4	Empty
ID 5	Empty
Key 1	Data type of customer complaint (default: REK)
Key 2	Area of customer complaint
Key 3	Empty
Key 4	Empty
Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of customer complaint> var_HYDRA_rekdetnr=<Complaint detail number>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber`, `var_HYDRA_reknr` and `var_HYDRA_rekdetnr` can be used to generate the reference to the associated customer complaint detail directly.

10 Workflow - Internal Complaint Detail

10.1 Usage

This is the description of the standard workflow process to be used for processing internal complaint details.

The workflow is administered under the name `HYDRA_complaintdetail_internal`.

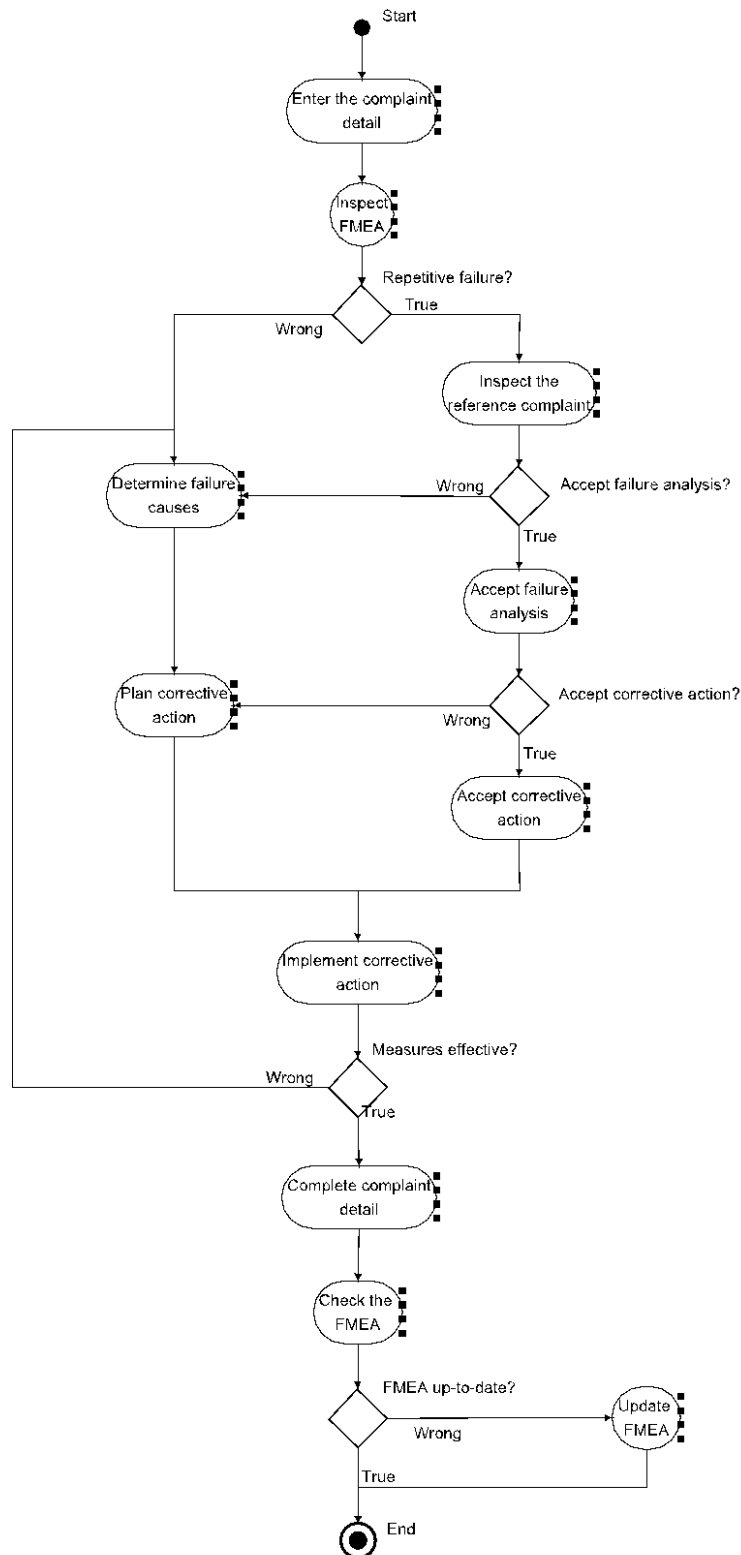

A workflow based on the process described here is instantiated when a complaint detail for a complaint of the type "internal complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of internal complaint details.

10.2 Process Chart

10.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on basis of the responsible person defined in the associated complaint detail at that time.

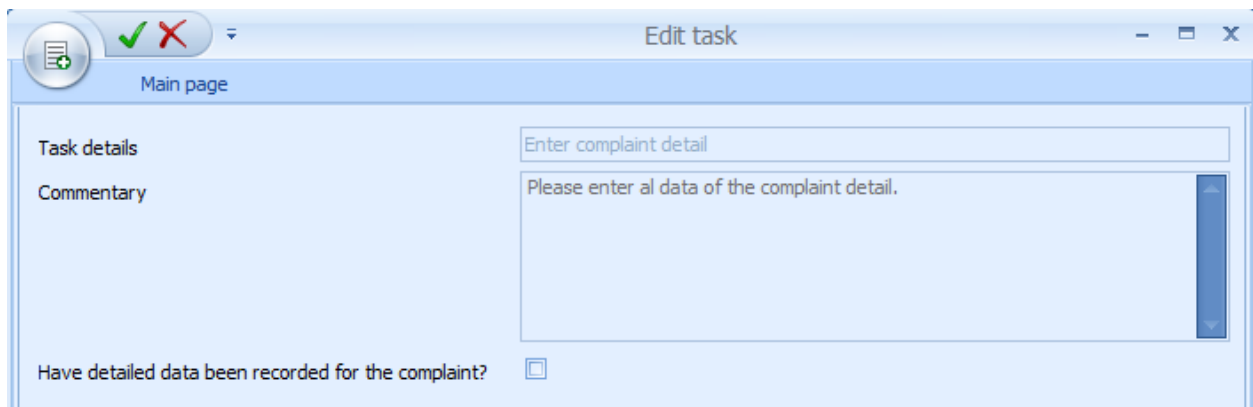

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint detail in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint detail, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

10.2.2 Process Step "Entry of complaint detail"

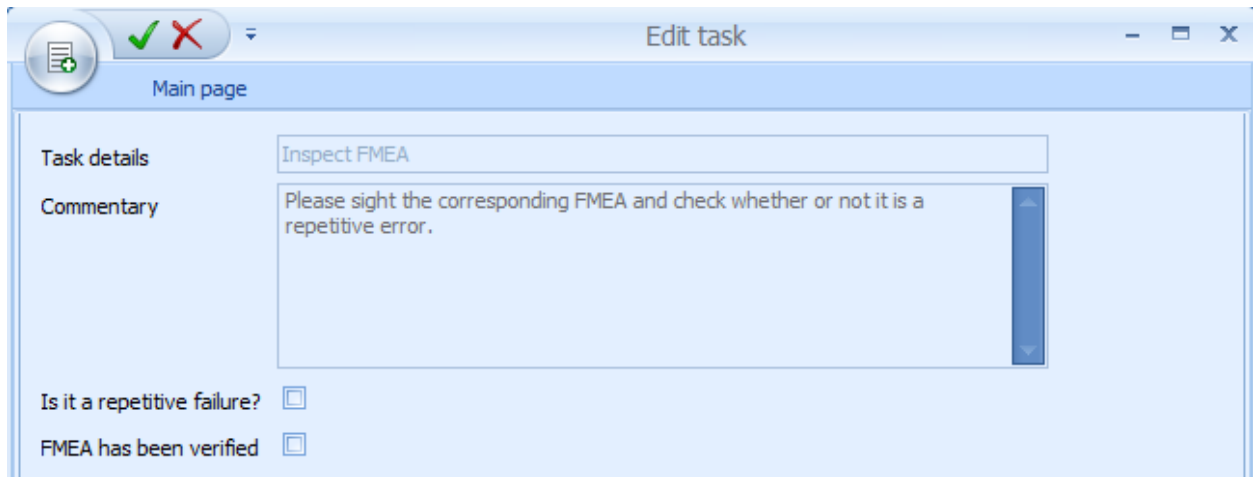

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have the complaint detail data been entered?".

10.2.3 Process Step "FMEA verification"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". At the top, there is a toolbar with a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text box with the text "Inspect FMEA". The "Commentary" section contains a text box with the text "Please sight the corresponding FMEA and check whether or not it is a repetitive error." Below the commentary text box, there are two checkboxes: "Is it a repetitive failure?" and "FMEA has been verified", both of which are currently unchecked.

In accordance with the status of the checkbox "Is it a repetitive failure?", it is decided at the time of task completion whether a reference complaint is to be searched from which the failure analysis and remedial action may be adopted.

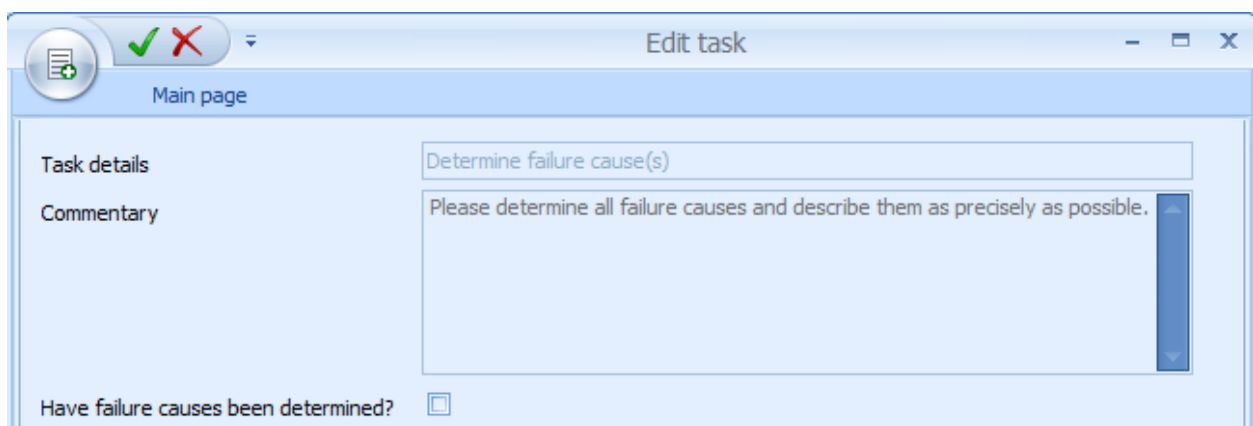

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has FMEA been verified?".

10.2.4 Ramification "Repetitive failure?"

In accordance with the selection in the checkbox "Is it a repetitive failure?" in the previous process step, there is a ramification either to the verification of a reference complaint or to determining the failure cause.

10.2.5 Process Step "Determine failure causes"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

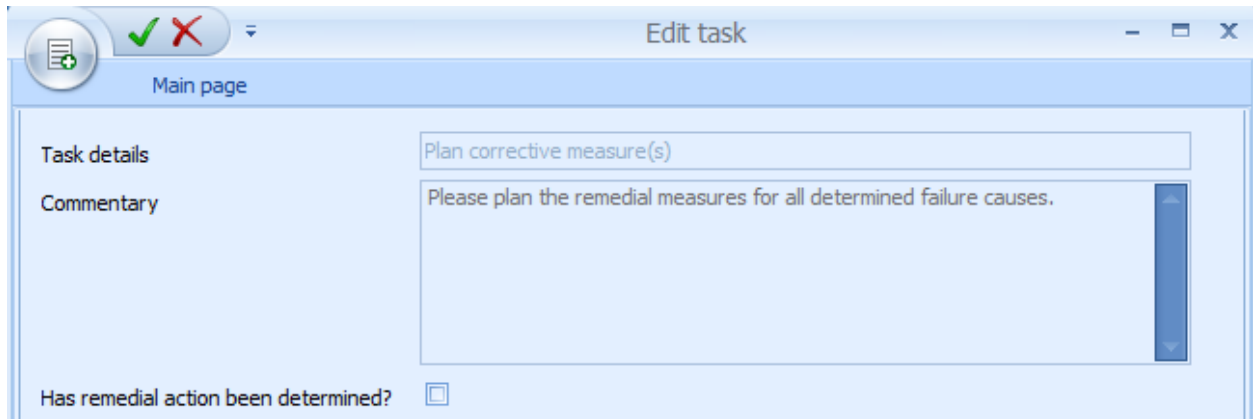

The screenshot shows a software window titled "Edit task". At the top, there is a toolbar with a green checkmark, a red X, and a dropdown arrow. Below the toolbar is a "Main page" header. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text box with the text "Determine failure cause(s)". The "Commentary" section contains a text box with the text "Please determine all failure causes and describe them as precisely as possible." Below the commentary text box, there is a checkbox labeled "Have failure causes been determined?", which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have failure causes been determined?".

10.2.6 Process Step "Planning of remedial action"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

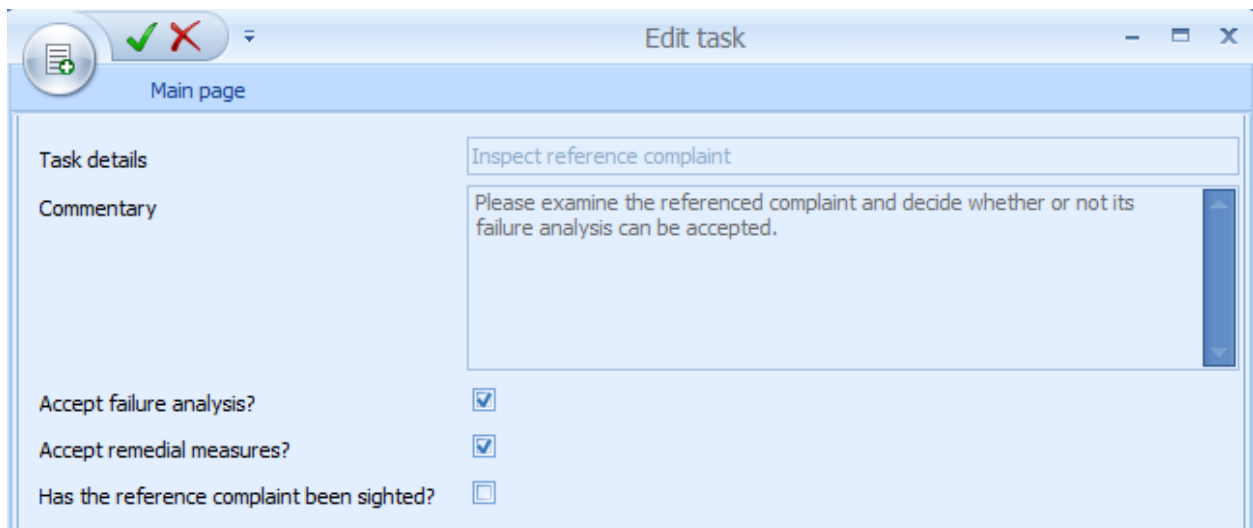

The screenshot shows a web application window titled "Edit task". The window has a blue header bar with a "Main page" link and a toolbar with a green checkmark, a red X, and a dropdown arrow. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the placeholder text "Plan corrective measure(s)". The "Commentary" section contains a text area with the text "Please plan the remedial measures for all determined failure causes." and a vertical scrollbar. At the bottom of the window, there is a checkbox labeled "Has remedial action been determined?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has remedial action been determined?".

10.2.7 Process Step "Reference complaint verification"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". The window has a blue header bar with a "Main page" link and a toolbar with a green checkmark, a red X, and a dropdown arrow. The main content area is divided into two sections: "Task details" and "Commentary". The "Task details" section contains a text input field with the placeholder text "Inspect reference complaint". The "Commentary" section contains a text area with the text "Please examine the referenced complaint and decide whether or not its failure analysis can be accepted." and a vertical scrollbar. At the bottom of the window, there are three checkboxes: "Accept failure analysis?" (checked), "Accept remedial measures?" (checked), and "Has the reference complaint been sighted?" (unchecked).

The checkboxes "Accept failure analysis?" and "Accept remedial action?" will determine whether the relevant detail information from the reference complaint is adopted or is to be determined separately at a later point in time.

If the failure analysis cannot be adopted, remedial action must also be planned (regardless of the checkbox "Adopt remedial action?"). The reason for this is that remedial action must match the failure analysis. To ensure this, adoption of the remedial action is prevented if the failure analysis is not adopted.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the reference complaint been verified?".

10.2.8 Ramification "Accept failure analysis?"

In accordance with the selection in the checkbox "Adopt failure analysis?" in the process step "Reference complaint verification", there is a ramification to adopting the failure analysis or to determining the failure causes.

10.2.9 Process Step "Accept failure analysis"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the failure analysis been accepted?".

10.2.10 Ramification "Adopt remedial action?"

In accordance with the selection in the checkbox "Adopt remedial action?" in the process step "Reference complaint verification", there is a ramification to adopting the remedial action of the reference complaint or to planning remedial action.

10.2.11 Process Step "Adopt remedial action"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area containing the text "Accept immediate measures" and "Please take over the remedial action of the determined reference complaint." Below this text area, there is a checkbox labeled "Have remedial measures been taken over?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has remedial action been adopted?".

10.2.12 Process Step "Implementation of remedial action"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area containing the text "Implement corrective measure(s)" and "Implement remedial measures and check their efficiency". Below this text area, there are two checkboxes: "Is remedial action effective?" which is checked, and "Has remedial action been implemented?" which is unchecked.

In accordance with the status of the checkbox "Is the remedial action effective?", it is decided at the time of task completion whether you return to determining the failure cause or whether processing is continued.

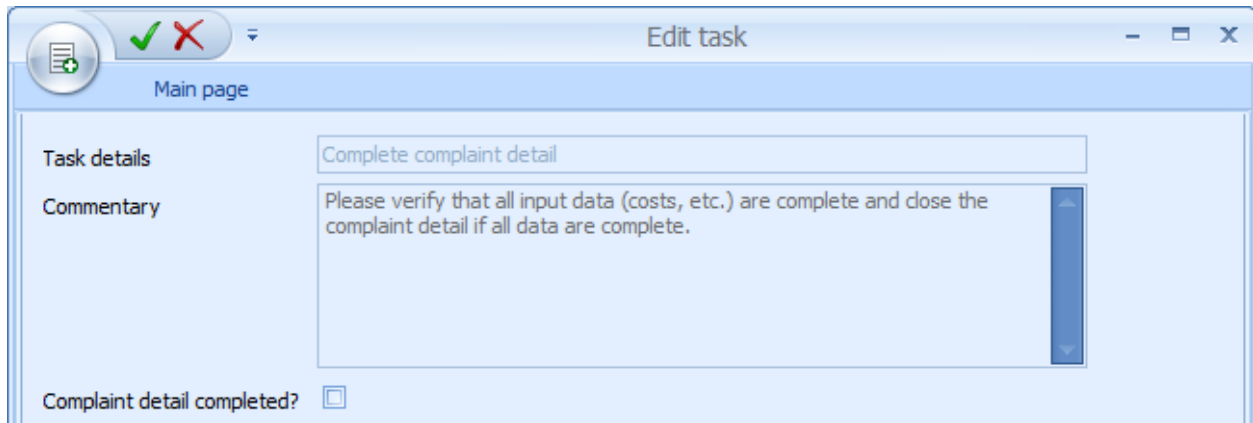

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has remedial action been implemented?".

10.2.13 Ramification "Action effective?"

In accordance with the selection in the checkbox "Is the remedial action effective?" in the previous process step, there is either a ramification to determine the failure cause or completion of the complaint detail is continued.

10.2.14 Process Step "Complete complaint detail"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

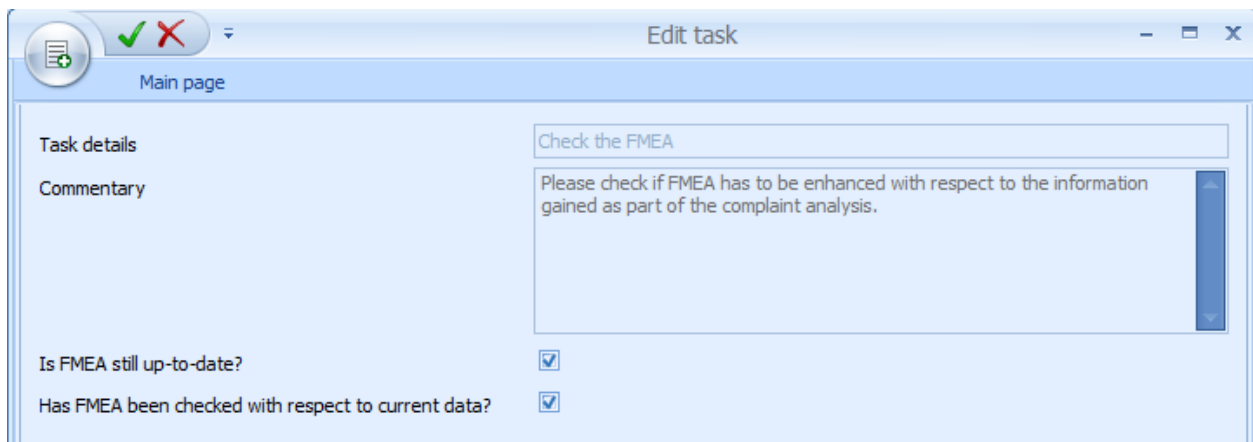

The screenshot shows a software window titled "Edit task" with a standard Windows-style title bar (minimize, maximize, close buttons). Inside the window, there is a "Main page" header. On the left, there is a sidebar with "Task details" and "Commentary" sections. The "Task details" section contains a text input field with the value "Complete complaint detail". The "Commentary" section contains a text area with the text "Please verify that all input data (costs, etc.) are complete and close the complaint detail if all data are complete." Below the commentary, there is a checkbox labeled "Complaint detail completed?" which is currently unchecked. At the top of the window, there are icons for a document, a green checkmark, and a red X, along with a dropdown arrow.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the complaint detail been completed?".

10.2.15 Process Step "FMEA verification"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task" with a standard Windows-style title bar. Inside the window, there is a "Main page" header. On the left, there is a sidebar with "Task details" and "Commentary" sections. The "Task details" section contains a text input field with the value "Check the FMEA". The "Commentary" section contains a text area with the text "Please check if FMEA has to be enhanced with respect to the information gained as part of the complaint analysis." Below the commentary, there are two checkboxes: "Is FMEA still up-to-date?" and "Has FMEA been checked with respect to current data?". Both checkboxes are currently checked. At the top of the window, there are icons for a document, a green checkmark, and a red X, along with a dropdown arrow.

In accordance with the status of the checkbox "Is FMEA still up-to-date?", it is decided whether you jump to FMEA updating or whether the workflow is to be finished.

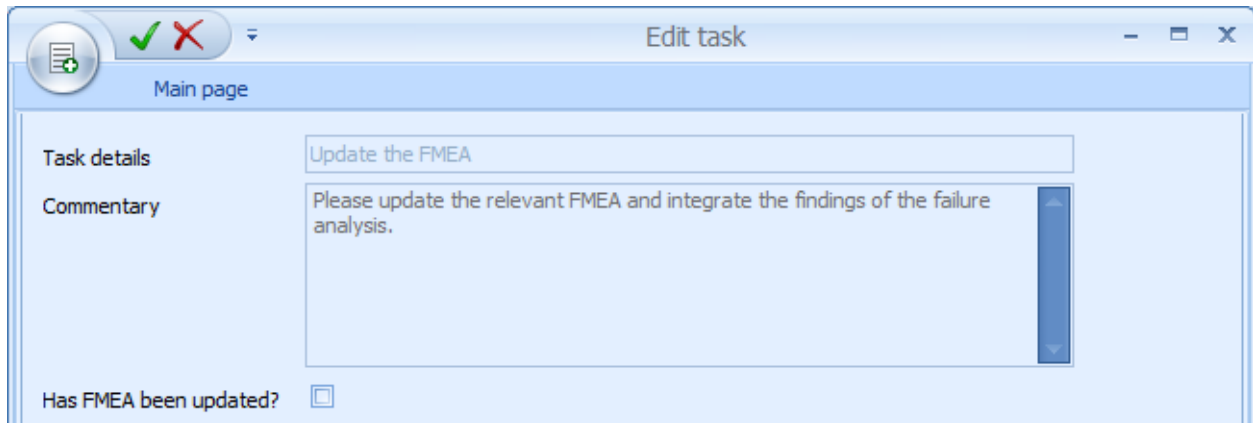

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has FMEA been checked with respect to current data?".

10.2.16 Ramification "Is FMEA still up-to-date?"

In accordance with the selection in the checkbox "Is FMEA still up-to-date?" in the previous process step, there is a ramification to updating FMEA or the workflow is finished.

10.2.17 Process Step "Update FMEA"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

Task details

Update the FMEA

Commentary

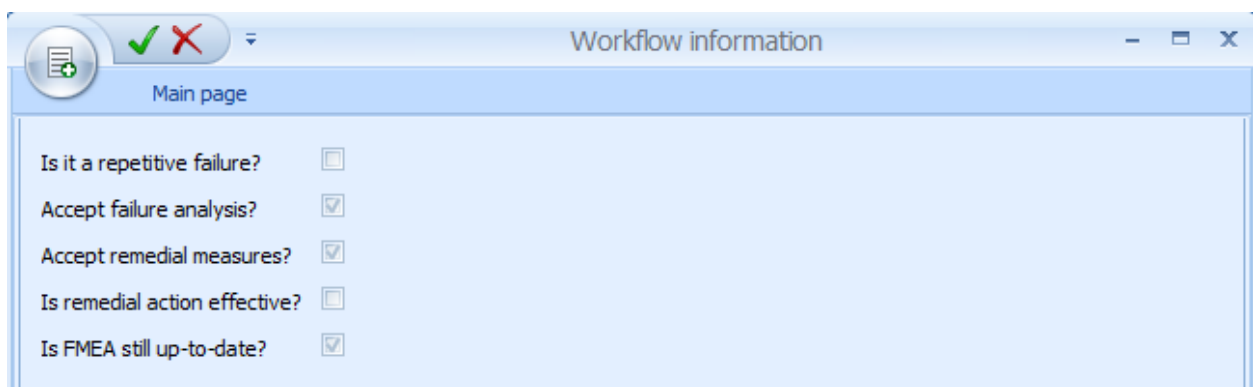

Please update the relevant FMEA and integrate the findings of the failure analysis.

Has FMEA been updated? ☐

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has FMEA been updated?".

10.2.18 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

Workflow information

Is it a repetitive failure? ☐

Accept failure analysis? ☒

Accept remedial measures? ☒

Is remedial action effective? ☐

Is FMEA still up-to-date? ☒

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

10.3 Integration

Upon creation of an internal complaint details, an active entry of the object type `WFM_CONFIG` with parameter `ComplaintDetail_ComplaintType_INTERN` is searched in the advanced object configuration of HYDRA.

The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaintdetail_internal`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters can be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Content
Module	COMPLAINTDETAIL
Designation	Workflow for complaintdetail
Process alias name	ComplaintDetail_ComplaintType_INTERN
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of internal complaint
ID 2	Number of complaint detail
ID 3	Empty
ID 4	Empty
ID 5	Empty
Key 1	Data type of internal complaint (default: REK)
Key 2	Area of internal complaint
Key 3	Empty
Key 4	Empty

Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of internal complaint> var_HYDRA_rekdetnr=<Complaint detail number>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber`, `var_HYDRA_reknr` and `var_HYDRA_rekdetnr` can be used to generate the reference to the associated internal complaint detail directly.

11 Workflow - Supplier Complaint Detail

11.1 Usage

This is the description of the standard workflow process to be used for processing supplier complaint details.

The workflow is kept under the name `HYDRA_complaintdetail_supplier`.

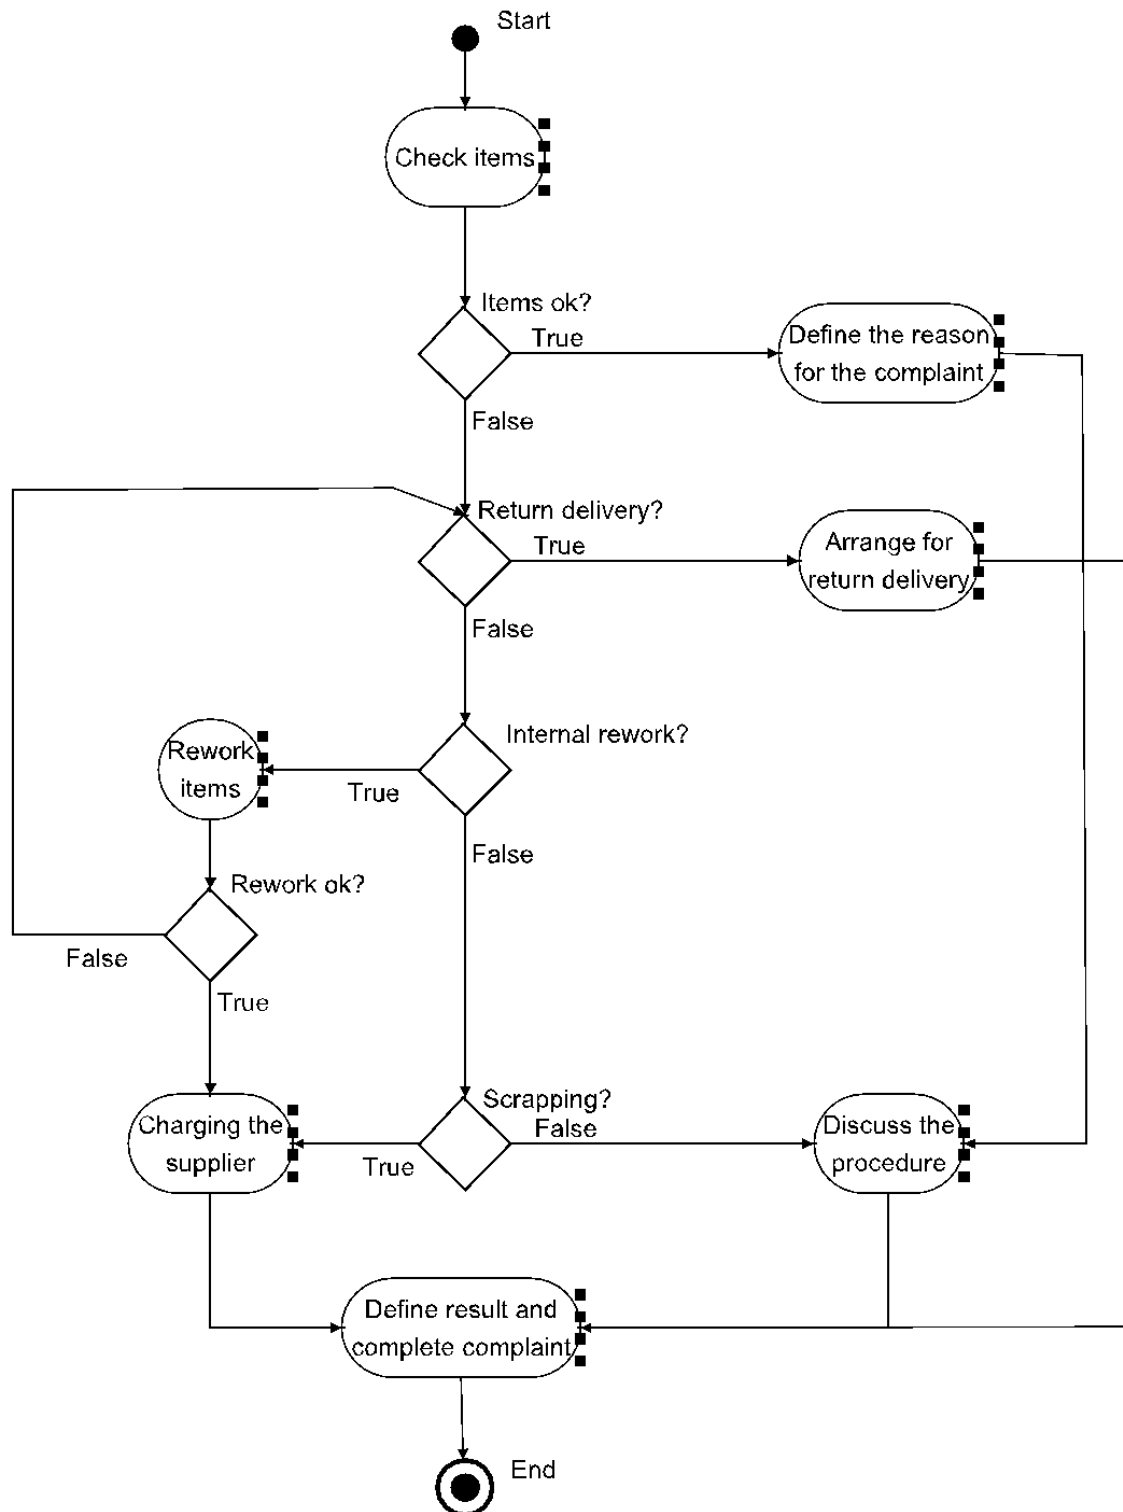

A workflow based on the process described here is instantiated when a complaint detail for a complaint of the type "supplier complaint" is created.

In the course of customizing, other workflow processes deviating from the standard could also be instantiated upon the creation of supplier complaint details.

11.2 Process Chart

11.2.1 Overview

Identification of Addressee of Relevant Task

Upon activation of a process step for which a generic task has been defined, the addressee of this task is identified on basis of the responsible person defined in the associated complaint detail at that time.

For this purpose, the type and ID are read first. The addressee is identified as follows according to the type:

- *Responsible person of type "external person":*
A workflow user whose logon name corresponds with the ID of the external person is searched.
- *Responsible person of type "person":*
At first, a HYDRA user is searched who was assigned the ID of the person responsible for the complaint detail in the "Person" field. Following this, a workflow user is searched whose logon name corresponds with the HYDRA user found.
- *Responsible persons of all other types:*
Using the ID of the person responsible for the complaint detail, a group is searched in the workflow management system.

Should problems occur regarding the determination of detail data, or should the searched workflow user and/or the group not exist, the group "COMPLAINT_MANAGER" is used as addressee.

11.2.2 Process Step "Entry of complaint detail"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a software window titled "Edit task". The window has a blue header bar with a "Main page" label and a green checkmark icon. The main content area is divided into two sections. The left section is titled "Task details" and contains a "Commentary" field. The right section is titled "Check the items" and contains a text area with the text "Please check the items delivered and decide how to proceed." Below the text area are five checkboxes with labels: "Are the items ok?", "If not: are the items to be returned?", "If not: Are the items to be reworked?", "If not: are the items to be scrapped?", and "Have the items been checked?".

In accordance with the status of the checkbox "Are the items ok?", it is decided whether the actual complaint reason has to be clarified or whether a relevant measure can be directly determined.

In the latter case, only, the checkboxes: "If not: are the items to be returned", "If not: are the items to be reworked?" and "If not: are the items to be scrapped?" determine the next processing step. In this regard, the system will only jump to the first measure selected (according to the sequence specified).

The workflow is not continued until completion of this task has been documented by activating the checkbox "Have the items been checked?".

11.2.3 Ramification "Are the items ok?"

In accordance with the selection in the checkbox "Are the items ok?" in the previous process step, there is a ramification either to clarify the complaint reason or to subsequent allocation to other processing steps.

11.2.4 Ramification "Are the items to be returned?"

In accordance with the selection in the checkbox "If not: are the items to be returned?" in the process step "Check items" and/or "Rework items", there is a ramification either to arrange for the items to be returned or to subsequent allocation to other processing steps.

11.2.5 Ramification "Internal rework?"

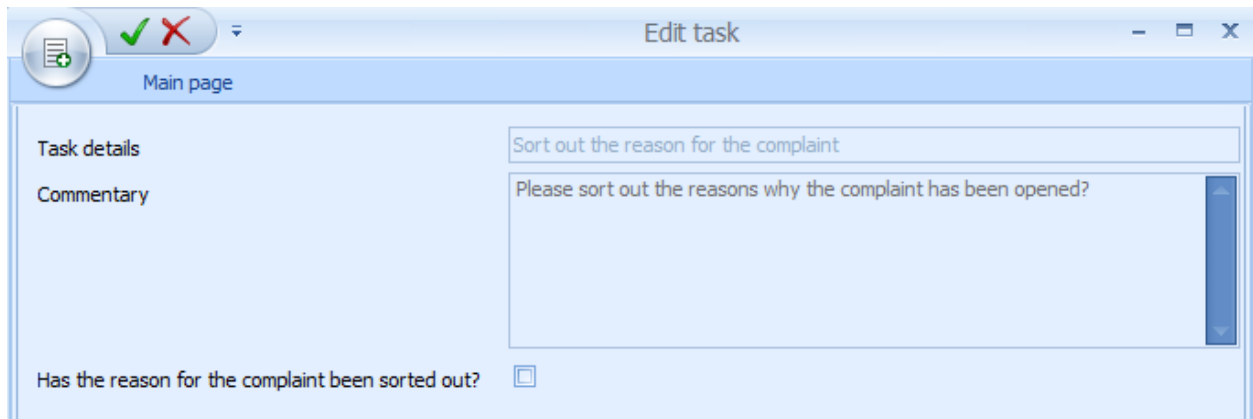

In accordance with the selection in the checkbox "If not: are the items to be reworked?" in the process step "Check items" and/or "Rework items", there is a ramification either to rework the items or to subsequent allocation to other processing steps.

11.2.6 Ramification "Are the items to be scrapped?"

In accordance with the selection in the checkbox "If not: are the items to be scrapped?" in the process step "Check items" and/or "Rework items", there is a ramification either to charge the supplier for the parts or to clarify the course of action.

11.2.7 Process step "Clarification of complaint reason"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

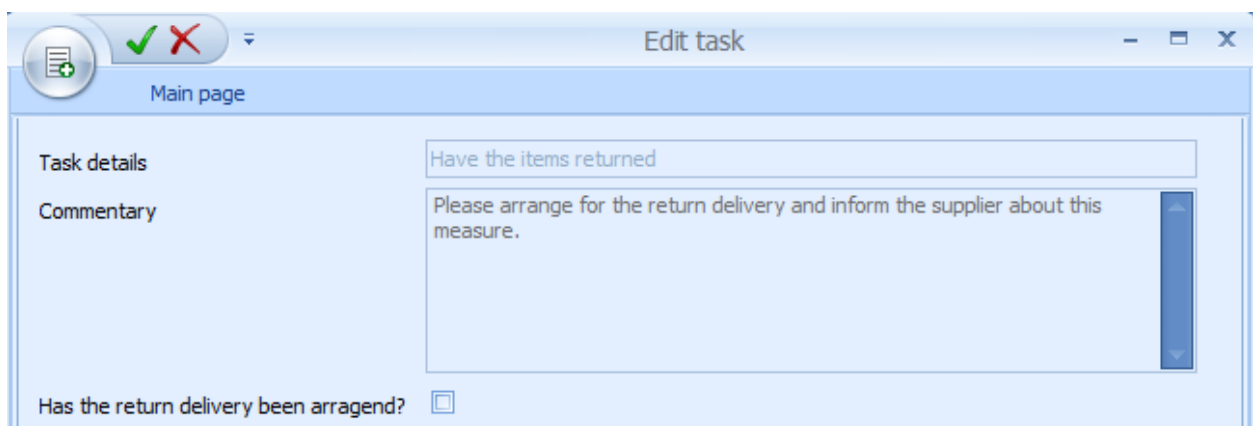

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area with the heading "Sort out the reason for the complaint" and the text "Please sort out the reasons why the complaint has been opened?". At the bottom of the window, there is a checkbox labeled "Has the reason for the complaint been sorted out?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the complaint reason been sorted out?".

11.2.8 Process Step "Arrange return"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The screenshot shows a web application window titled "Edit task". At the top left, there are icons for a list, a green checkmark, and a red X. Below these is a "Main page" tab. The window is divided into two main sections. On the left, under "Task details", there is a "Commentary" field. On the right, there is a large text area with the heading "Have the items returned" and the text "Please arrange for the return delivery and inform the supplier about this measure.". At the bottom of the window, there is a checkbox labeled "Has the return delivery been arranged?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has return delivery been arranged?".

11.2.9 Process Step "Rework items"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

Task details

Commentary

Have items reworked

Please arrange for the items to be reworked. After reworking, please assess their quality. If it is still not acceptable please decide how to proceed.

Has rework been successful? ☐

If not: are the items to be returned? ☐

If not: Are the items to be reworked once more? ☐

If not: are the items to be scrapped? ☐

Has rework been done? ☐

In accordance with the status of the checkbox "Has rework been successful?", it is decided whether the supplier has to be charged or whether a subsequent measure can be determined directly.

In the latter case, only, the checkboxes: "If not: are the items to be returned", "If not: are the items to be reworked again?" and "If not: are the items to be scrapped?" determine the next processing step. In this regard, the system will only jump to the first measure selected (according to the sequence specified).

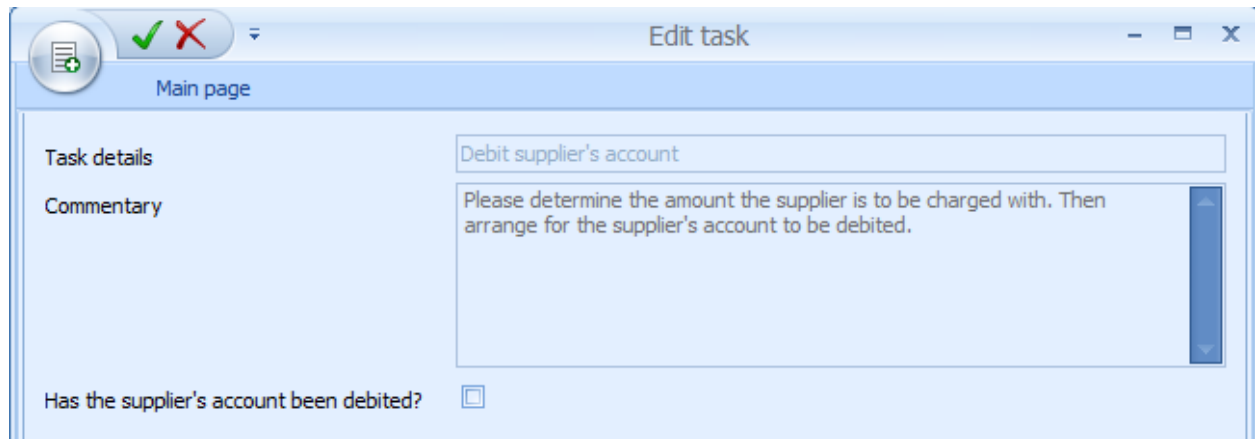

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has rework been performed?".

11.2.10 Ramification "Rework ok?"

In accordance with the selection in the checkbox "Has rework been successful?" in the previous process step, there is a ramification either to charge the supplier or to the re-allocation of processing steps.

11.2.11 Process Step "Debit supplier's account"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

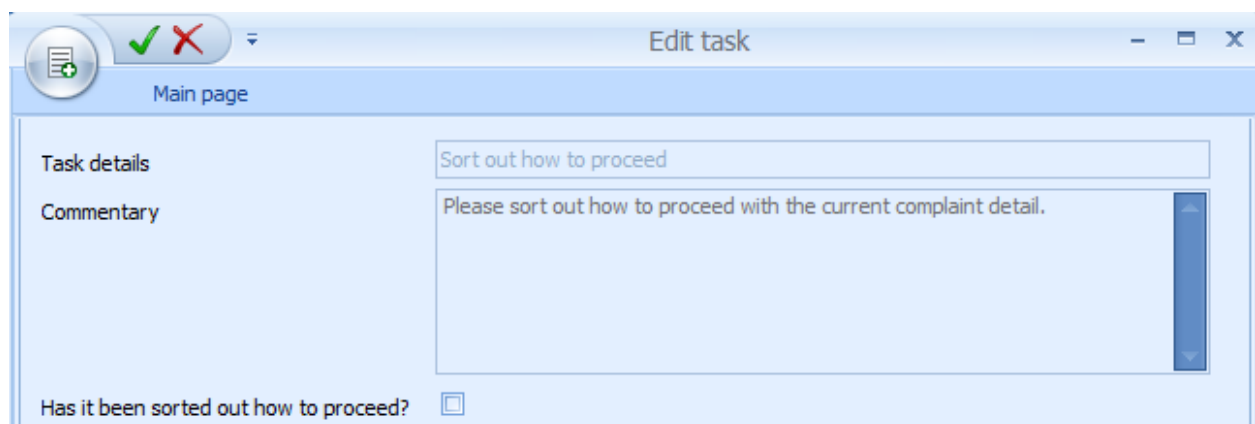

The screenshot shows a window titled "Edit task" with a "Main page" tab. On the left, there are labels for "Task details" and "Commentary". The "Task details" field contains the text "Debit supplier's account". The "Commentary" field contains the text "Please determine the amount the supplier is to be charged with. Then arrange for the supplier's account to be debited." At the bottom, there is a checkbox labeled "Has the supplier's account been debited?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the supplier's account been debited?".

11.2.12 Process Step "Clarification of course of action"

Activating this process step will create a task. The recipient of the task is notified by e-mail.

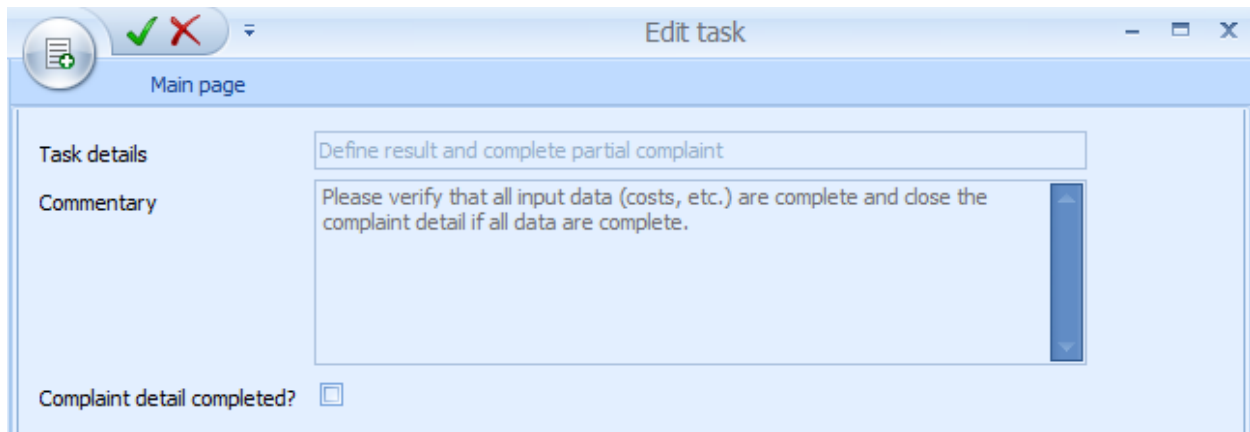

The screenshot shows a window titled "Edit task" with a "Main page" tab. On the left, there are labels for "Task details" and "Commentary". The "Task details" field contains the text "Sort out how to proceed". The "Commentary" field contains the text "Please sort out how to proceed with the current complaint detail." At the bottom, there is a checkbox labeled "Has it been sorted out how to proceed?" which is currently unchecked.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the further course of action been clarified?".

11.2.13 Process Step "Specify findings and complete"

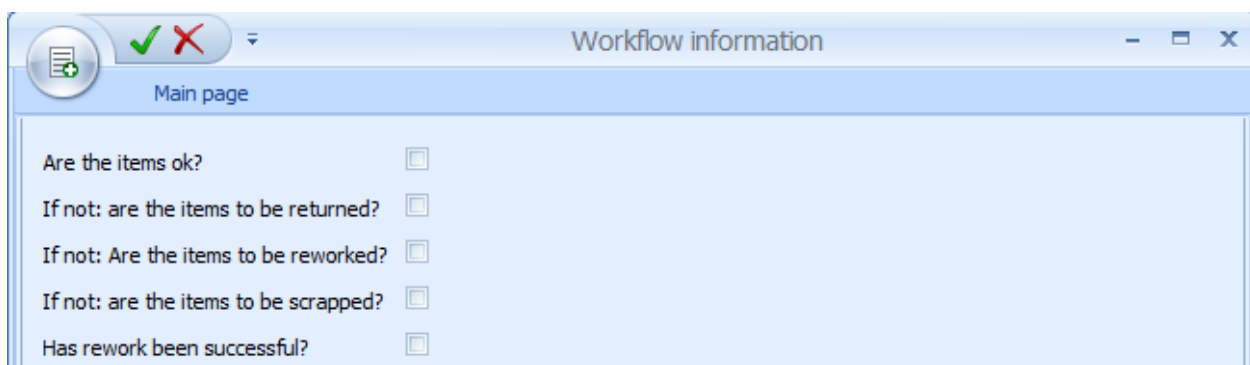

Activating this process step will create a task. The recipient of the task is notified by e-mail.

The workflow is not continued until completion of this task has been documented by activating the checkbox "Has the complaint detail been completed?".

11.2.14 Display of Workflow Information

The workflow information function will display all information which has been defined in workflow processing and has an effect on ramifications in the workflow.

The meaning of the elements in this display is explained in the context of the relevant process steps where this information is available for entry.

All information is made available as read-only information at this point.

11.3 Integration

Upon creation of a supplier complaint detail, an active entry of the object type `WFM_CONFIG` with parameter `ComplaintDetail_ComplaintType_LIEFERANT` is searched in the advanced object configuration of HYDRA.

The parameter "Object ID 1" of this entry is interpreted as the name of the process definition to be used (by default: `HYDRA_complaintdetail_supplier`). The parameter "Object ID 2" of the entry found is interpreted as the version of the process definition to be used.

These parameters can be used to create a new workflow event. Its key fields are assigned as follows:

Key field	Content
Module	COMPLAINTDETAIL
Designation	Workflow for complaintdetail
Process alias name	ComplaintDetail_ComplaintType_LIEFERANT
Process name	Name of process definition (result of the previously described search)
Process version	Version of process definition (result of the previously described search)
ID 1	Internal number of supplier complaint
ID 2	Number of complaint detail
ID 3	Empty
ID 4	Empty
ID 5	Empty
Key 1	Data type of supplier complaint (default: REK)
Key 2	Area of supplier complaint
Key 3	Empty
Key 4	Empty
Key 5	Empty
Data	var_HYDRA_rectype=<Data type of complaint> var_HYDRA_ber=<Area of complaint> var_HYDRA_reknr=<Internal number of supplier complaint> var_HYDRA_rekdetnr=<Complaint detail number>

Subsequently, an attempt is made to instantiate a workflow on the basis of the previously identified name of the process definition and its version. Should this fail, the process event will provide an indication of the cause.

If instantiation of the workflow was successful, the workflow variables `var_HYDRA_rectype`, `var_HYDRA_ber`, `var_HYDRA_reknr` and `var_HYDRA_rekdetnr` can be used to generate the reference to the associated supplier complaint detail directly.
