1 Complaint Monitoring

Purpose

The *Complaint monitoring* contains the following SMA applications.

- Complaint analysis
- Complaint failure
- Analysis of complaint costs

All applications provide graphic evaluations using pivot analyses. In addition to the graphic evaluations, the filtered data can also be displayed in tables.

You can define different application profiles for each application. This way, you can predefine individualized evaluation profiles for specific use cases. You can change the evaluation profile manually or you can select another application profile. Another option is to manually change the evaluation profile.

Implementation notes

If you want to show information/evaluations of different complaint data for a specified time or filter range in a clear overview, then the applications of the *Complaint monitoring* are the ideal products.

Integration

You can integrate the applications of the *Complaint monitoring* in the application *Information Dashboard*.

Features

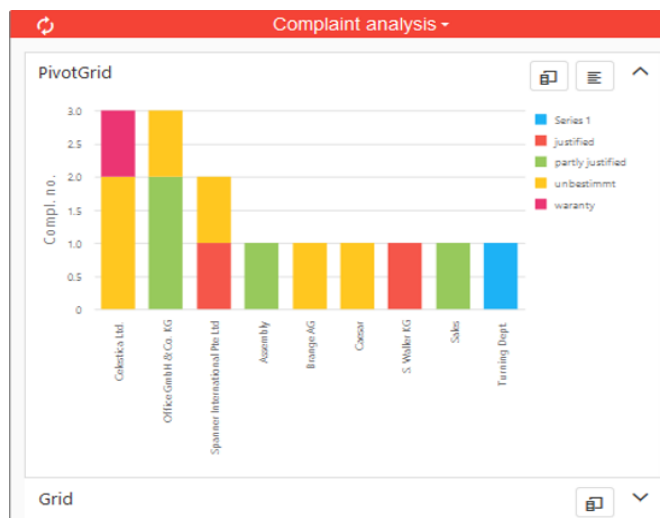

The following functions are available:

- Graphic and tabular analysis of all complaint data including extensive filter criteria and display options.
- Monitoring of complaints, e.g. development of complaints, status of current complaints, analysis of results.
- Analysis of complaint failures, their causes and main areas.
- Analysis of complaint costs, e.g. you can identify the main cost types and distribution of costs per customer/supplier.

2 Complaint Analysis

Overview

App name	Complaint analysis
Short name of app	Complaint analysis
Function authorization	SMA.CA

The application *Complaint analysis* provides the graphic analysis of collected complaint data in form of a pivot analysis. Example: You can use the *Complaint analysis* to display the number of complaints per complaining party including result for a specified period of time. The results of the analysis are used to decide whether measures must be taken.

In addition to the graphic view, you can also display the data in a table.

Purpose

The application *Complaint analysis* includes the following functions:

- Graphic and tabular analysis of collected complaint data
- General display of the complaint development per months, years or for specific customers, suppliers, etc.
- Calculation of the complaint frequency per customer, supplier, article, etc.
- Analysis of complaint results

Integration

The complaint analysis function only evaluates contents of the *Complaint management*. The system can automatically generate complaints after a negative inspection result.

Requirements

There are no special requirements. The only requirement is that complaints and the relevant detail data must be collected.

Selection criteria

Use the button  to open the selection area.

Use the configuration button  of the selection area to open the fields that are available for this application. Select the required fields to enable these fields as filter fields.

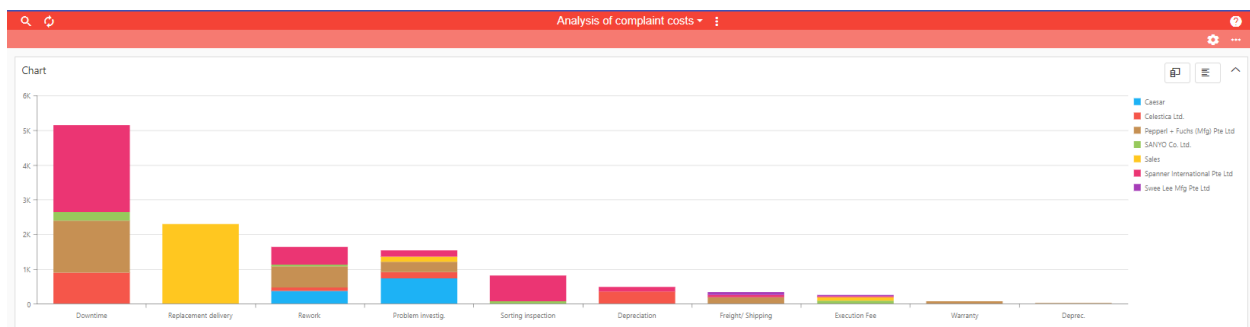

Editing functions

This application does not include any editing functions.

3 Analysis of Complaint Costs

Overview

App name	Analysis of complaint costs
Short name of app	Analysis of complaint costs
Function authorization	SMA.CCA

The application *Analysis of complaint costs* provides the graphic analysis of the collected complaint costs in form of a pivot analysis. To collect complaint costs, you use the cost types defined in the master data of the quality management. You can assign the complaint costs directly to the complaint or to the article complained about. The article complained about belongs to the complaint details.

The *Analysis of complaint costs* can for example display the main costs per complaining party during a period of time previously specified. The results of the analysis are used to decide whether measures must be taken.

In addition to the graphic view, you can also display the data in a table.

Purpose

The application *Analysis of complaint costs* includes the following functions:

- Graphic and tabular analysis of the costs that were collected for a complaint or article.
- Detailed analysis of collected complaint costs for different cost types.
- Display of the development of complaint costs per month, year or for specific customers, suppliers, internal departments, etc.
- Calculation of the main complaint costs per customer, supplier, article, etc.

Integration

The application *Analysis of complaint costs* only evaluates contents of the *Complaint management*. Note: Also a negative inspection result can be used to automatically generate a complaint.

Requirements

There are no special requirements. The only requirement is that complaints and the relevant detail data must be collected. The article complained about belongs to the complaint details.

Selection criteria

Use the button  to open the selection panel.

Use the configuration button  of the selection panel to open the fields that are available for this application. Use a separate identifier to enable these fields as filter fields.

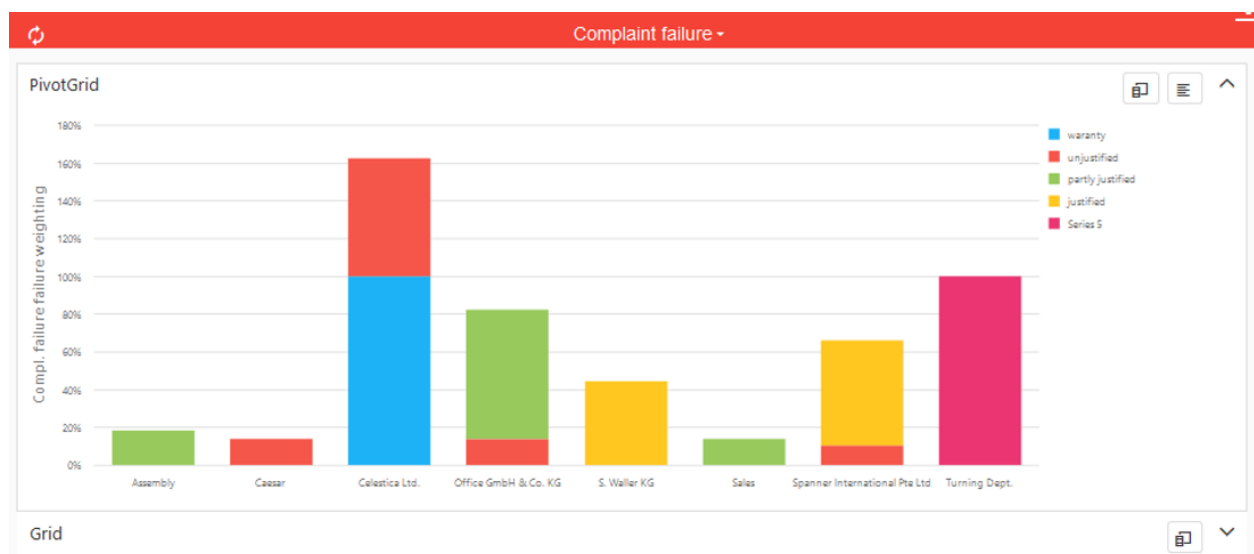

Editing functions

This application does not include any editing functions.

4 Complaint Failure

Overview

App name	Complaint failure
Short name of app	Complaint failure
Function authorization	SMA.CFA

The application *Complaint failure* provides a graphic analysis of articles complained about and of the failures assigned to the articles. A pivot chart is used to visualize the analysis. The application collects failure type, failure location, failure cause and origin for the detected failures. The analysis of *Complaint failures* can for example display the main failures per complaining party including result during a period of time previously specified. The results of the analysis are used to decide whether measures must be taken.

In addition to the graphic view, you can also display the data in a table.

Purpose

The application *Complaint failure* includes the following functions:

- Graphic and tabular analysis of the failures that were collected for an article.
- Display of the development of complaint failures per month, year or for specific customers, suppliers, internal departments, etc.
- Calculation of the complaint failure frequency per customer, supplier, article, etc.

Integration

The application *Complaint failure* only evaluates contents of the *Complaint management*. Note: Also a negative inspection result can be used to automatically generate a complaint. If a complaint is generated automatically, the failure triggering the complaint in the inspection process is automatically assigned to the complaint.

Requirements

There are no special requirements. The only requirement is that complaints and the relevant detail data must be collected. The article complained about belongs to the complaint details.

Selection criteria

Use the button  to open the selection panel.

Use the configuration button  of the selection panel to open the fields that are available for this application. Use a separate identifier to enable these fields as filter fields.

Editing functions

This application does not include any editing functions.
