1 Complaint Management

Possible fields of application

This function package is used if complaints are collected or processed with mobile devices. A further application is the ability to request complaint status, analysis / view detailed information on a mobile device.

Implementation notes

The function package is especially designed for the use off-site without a network connection. That is the case during if you are away on a job or visiting customers and suppliers. It is also possible to use the function package in areas where there is no network connection available to collect complaint data.

It is required for this function package that master data had been collected in HYDRA previously. These are:

- Article
- Customers
- Suppliers
- Staff
- Failure types
- Measures

Integration

Collecting and processing claims with this function package on a mobile device is directly related to the function of the complaint module in the MOC. Complaint data collected on a mobile device can be further processed and evaluated in the MOC. Also, master data collected in the MOC are the basis to use complaint management for mobile devices.

Functions Scope

What does this function package offer, especially relating to the documented functions of the license?

This package offers the following performance features to collect, manage and analyze complaints.

- Opening and creating complaints for different complaint types (supplier, customer, internal).
- Information for additional complaint details like articles, status, findings, responsibility, dates.
- Assignment of measures of various types (short term, medium term and long term) inclusive of status, deadlines and responsibilities.
- Assignment of detected failures.

- Taking photos of failures as part of the document list if available.
- This simplifies and speeds up the access to collected complaints in a complaint overview stating the status, result etc.
- Request comprehensive detailed information of a selected complaint.
- Graphical visualization of current processing status in an assigned workflow process (HYDRA 8 license required for the creation of workflow).
- Request contact data for an assigned, responsible person with the option to send mail to that person. Function for mobile clients to collect, manage and analyze.

2 Complaint Overview

In the complaint overview a list appears on the left stating all complaints. The list can be restricted using a filter. A match code filter is available for the user. Content to be filtered in a text is replaced by the symbol "*". Using the symbol "?" an individual symbol can be replaced. All content of the complaint list can be filtered. The following information is part of the complaint list:

- Complaint number - complaint detail number
both numbers are separated by a hyphen and are shown in the first line of a complaint. Possible display format "2324 - 1" (2324 is the complaint number, "1" is the complaint detail number).
- Article number - article description
the information is part of the second line and is also separated by a hyphen.

Also, the status of a complaint is highlighted by a colored LED symbol. The following color assignments for a complaint status are valid:

- completed => green LED
- collected => yellow LED
- open=> red LED
- other status => black LED

A special filter containing various filter criteria can be requested which is an additional option to directly filter match codes in the complaint list. Selection lists are available to facilitate filtering for many fields. Both fields must be filled (from / until) if a filter is used for date of receipt.

In the right display area detailed information is shown in the list for the selected complaints. The parallel display of the left and right display area is dependent on the selected display medium. For example on the smartphone only one complaint list is displayed. In order to show details the required complaint should be selected.

The detailed display enables using special function buttons for the following create/process function:

- New creation of a complaint (complaint header incl. -detail).
- Process complaint (complaint header incl. -detail)
- Request all measures relating to complaints (complaint header, detail and failure analysis)
- Creating measures relating to a complaint header
- Creating measure relating to a complaint detail
- Request an assigned failure type
- Collecting failure type
- Request documents relating to a complaint (complaint header, detail and failure analysis)
- Request graphical workflow display for the complaint header

- Request graphical workflow display for the complaint detail
- Creating a document relating the complaint header
- Creating documents relating to a complaint detail
- Collecting an error pattern relating to the complaint (document type upload)
This function requires a Drag & Drop function in the MOC application for the complaints management. This is available from REK 8.2.
- Collecting an error pattern relating to the complaint detail (document type upload)
This function requires a Drag & Drop function in the MOC application for the complaints management. This is available from REK 8.2.

3 New Creation of Complaints

In the collection dialog for a complaint, data relating to the complaint header and complaint detail can be collected simultaneously. After storage complaint header and complaint detail are automatically created. The list of complaints is instantly updated after it has been saved. In order to add further information to a newly collected complaint (i.e. measures), the complaint must be selected manually as the first complaint in the list is automatically checked. The new complaint can be easily identified by filtering the date of receipt or article information.

The fields "Complaint type" and "Area" are mandatory fields. Entries can only be executed by requesting a selection list. No complaint can be created without completing details in these fields.

In case a complaint number has not been assigned, it will be assigned automatically upon saving.

The field "Date of receipt" is automatically pre allocated with a date from the system but can be changed. Depending on the browser, a calendar opens to facilitate the completion of the date. This function is not supported by every browser. It is not supported by the Internet Explorer. If the calendar does not open, the date must be collected in the format "YYYY-MM-DD". The detailed display with date fields are presented in the format "DD.MM.YYYY".

If no information is added to the field "Received by" the currently logged person is automatically assigned to the field upon saving. After saving both fields cannot be changed, just like the fields "Complaint number", "Complaint type" and "Area".

A requirement is that the MOC has the article number with or without drawing in the article master data.

Other fields can collect information for the complaint header or complaint detail like status, results, originator of the complaint, contacts and party in charge. You can populate the fields by requesting the selection lists. The collected data can always be added or changed in SMA-REK or via the MOC.

Using smartphones the fields for categories like "Contact", "Party in charge complaint header" and "Party in charge complaint details" and the "Target date" are not available. Please observe above mentioned restrictions for the field "Target date" relating to the entry of calendar details.

4 Changing Complaints

In this dialog the fields "Complaint number and "Area" are not displayed. Additionally the field "Actual date" is shown.

Depending on the browser, a calendar opens to facilitate the completion of the date in the field. This function is not supported by every browser. It is not supported by the Internet Explorer. If the calendar does not open, the date must be collected in the format "YYYY-MM-DD". The detailed display with date fields are displayed in the format "DD.MM.YYYY".

In order to make detailed information available not changeable fields like "Ext. detail number", "Receipt date" and "Received by" are displayed.

There is also the option to change or add information. Like in the collection dialog, changing and collection of some fields is carried out by requesting the selection list and uploading the selected data set.

Using smartphones, the fields for categories like "Contact person", "Party in charge complaint header", "Party in charge complaint details" as well as the "Target date" and "Actual date" are not available. Also fields that cannot be changed are not displayed on smartphones and tablets.

5 List of Measures containing Detailed Display

In the measure overview a list of all measures appears on the left hand side. This list contains measures relating to complaint header, complaint detail as well as failure analysis.

If a complaint contains several complaint details, for each combination of complaint header and complaint detail a separate entry appears in the complaint overview list. All measures are displayed in order to obtain an overview. It is irrelevant if the measures are assigned to a complaint detail or a failure type. Therefore, all measures are displayed which refer to the same complaint number.

The content can be restricted using a filter. A match code filter is available for the user. Content to be filtered in a text is replaced by the symbol "*". Using the symbol "?" an individual symbol can be replaced. The complete content of a measure list can be filtered. The following information is part of the complaint list:

- Measure number - measure description

The above information is separated with a hyphen and is displayed in the 1. line of a measure.

Possible display format: "2324 - oil parts" ("2324 is the measure number and "oil parts" is the measure description).

- Measure text - target date

Article	number	-	article	description
---------	--------	---	---------	-------------

Information is part of the 2. line and are also separated by a hyphen.

Also, the status of a complaint is highlighted by a colored LED symbol. The following color assignments for a measure status are valid:

- Completed => green LED
- open=> yellow LED
- in process => red LED
- sighted => blue LED
- other status => black LED

In the right display area detailed information is shown in the list for the selected measure. The parallel display of the left and right display area is dependent on the selected display medium. Only the measure list is displayed on the smartphone. In order to show details the required measure should be selected.

Using a smartphone the fields "Fulfillment in %" and "Effectiveness in %" are not displayed.

In the detailed overview the selected measure can be processed via a button.

The new creation of measures is carried out in the home screen of the detailed complaint display. Here you can decide if the measure should be collected in the complaint header or the complaint detail.

Collection of measure for a failure type can only be done via the MOC.

6 Failure Type List containing Details

The dialog "Failure type overview" shows on the left hand side of the list all collected failure types which are assigned to the same complaint number. If a complaint contains several complaint details, all failure types of the complaint are always displayed even though specific failure types are assigned to one complaint detail. If a complaint shows for example 3 complaint details then 3 entries appear in the complaint overview list. For each of the entry the same failure type list is displayed.

The content can be restricted using a filter. A match code filter is available for the user. Content to be filtered in a text is replaced by the symbol "*". Using the symbol "?" an individual symbol can be replaced. The complete content of the list can be filtered. The following information is part of the failure type list:

- Failure type number
The information is displayed in the 1. line.
- Failure type description - comment

Article number - article description
Information is part of the 2. line and is also separated by a hyphen.

In the right display area detailed information is shown in the list for the selected failure type. The parallel display of the left and right display area is dependent on the selected display medium. The smartphone only displays the failure type list. In order to show details the required failure type should be selected.

In the detailed overview the selected failure type can be processed via a button.

The new creation of failure types is carried out in the home screen of the detailed display of a complaint.

Collection of measure for a failure location, cause of failure and originator of failure can only be done via the MOC.

7 Create Measures for the Complaints Header

The collecting dialog facilitates to create measures for the complaint header.

Independent from the device you use, all fields are available.

Assignment of the measure type, the findings and the responsible failure type is carried out using the selection list. Measures can also be selected using the selection list but also by directly entering the number of the measure. When assigning measures using the selection list the measure number is loaded. Collection of the responsible personnel is carried out by directly entering their "number". The person must be set up before in the MOC. In a measure list which can be requested separately measure description and detailed information of the responsible party is also displayed.

Depending on the browser, a calendar opens to facilitate the completion of the date. This function is not supported by every browser. It is not supported by the Internet Explorer. If the calendar does not open, the date must be collected in the format "YYYY-MM-DD". The detailed display with date fields are displayed in the format "DD.MM.YYYY".

Using the fields "Text" and "Comment" the measure can be explained in detail.

In a separate processing dialog the effectiveness and the fulfillment as well as the actual date can be added.

8 New Creation of Measures for Complaint Details

The collecting dialog facilitates to create measures for complaint details.

Independent from the device you use, all fields are available.

Assignment of the measure type, the findings and the responsible failure type is carried out using the selection list. Measures can also be selected using the selection list but also by directly entering the number of the measure. When assigning measures using the selection list the measure number is loaded. Collection of the responsible personnel is carried out by directly entering their "number". The person must be set up before in the MOC. In a measure list which can be requested separately measure description and detailed information of the responsible party is also displayed.

Using the fields "Text" and "Comment" the measure can be explained in detail.

In a separate processing dialog the effectiveness and the fulfillment as well as the actual date can be added.

9 New Creation of Failure Types for Complaint Details

The collecting dialog facilitates to create failure types for complaint details.

Independent from the device you use, all fields are available.

The field "Weighting" is mandatory. It is possible, using the information stated in that field, to document how often a failure occurs

Collecting a measure can be carried out using a selection list or by directly inserting the failure type number. When assigning measures using the selection list the failure type number is loaded. A description is added in a failure type list which must be requested separately. The failure type to be collected must be set up before in the MOC.

Using the fields "Comment" the failure type can be explained in detail.

If the checkbox is activated externally then there is a possibility in the MOC to print an 8D report for this failure type.

10 Document List

In the document overview a list of documents appears on the left hand side. This list contains documents relating to complaint header, complaint detail as well as failure analysis.

If a complaint contains several complaint details, for each combination of complaint header and complaint detail a separate entry appears in the complaint overview list. All document entries for all documents are displayed in order to obtain an overview. It is irrelevant if the documents are assigned to a complaint detail or a failure type. Therefore all document entries are displayed which refer to the same complaint number.

The content can be restricted using a filter. A match code filter is available for the user. Content to be filtered in a text is replaced by the symbol "*". Using the symbol "?" an individual symbol can be replaced. The complete content of the document list can be filtered. The following information is part of the document list:

- Document type
Failure type number
The information is displayed in the 1. line of the document entry.
- Description
The information is displayed in the 2. line of the document entry.

In the right display area detailed information is shown in the list for the selected document entry. The parallel display of the left and right display area is dependent on the selected display medium. Only the document list is displayed on the smartphone. In order to show details the required document entry should be selected.

The fields "Externally" and "Position" are not available on the smartphone.

In the detailed overview the selected document entry can be processed via a button.

A further button enables to display document content. The content of the field "Text" is shown with the document type "Text". For the type "URL" or "File" the "linked" document is opened with the respective program and displayed. In order to display the URL entry a "Link" in form of a <http://www.mpdv.de> is required. An entry in the form of www.mpdv.de cannot be displayed.

The field "Assignment" can only show the content if the document is assigned to a failure type.

The new creation of document entries is carried out in the home screen of the detailed display of a complaint. Here you can decide if the document entry be should collected in the complaint header or the complaint detail.

Collection of document entries for a failure type can only be done via the MOC.

11 New Creation of Document for the Complaint Header

The collecting dialog facilitates creating a document with type "Text" for the complaint header. Documents type "File" and "URL" cannot be assigned. To assign pictures of defects a special function is available. This is a button in the dialog of the complaints overview.

Independent from the device you use, all fields are available.

The field "Position" is a mandatory field and a position number must be attached. The number should be same as the complaints number but has not been assigned yet.

Using the field "Description" a "Title" is assigned to the document. This title also appears in the document list.

The document text itself is collected in the field "Text".

The field checkbox "External" has currently no function. It is though possible to use this in reports for complaints as a filter when printing information. This field is not displayed on smartphones.

12 New Creation of Document for Complaint Details

The collecting dialog facilitates to create a document with type "Text" for the complaint detail. Documents type "File" and "URL" cannot be assigned. To assign pictures of defects a special function is available. This is a button in the dialog of the complaints overview.

Independent from the device you use, all fields are available.

The field "Position" is a mandatory field and a position number must be attached. The number should be same as the complaints detail but has not been assigned yet.

Using the field "Description" a "Title" is assigned to the document. This title also appears in the document list.

The document text itself is collected in the field "Text".

The field checkbox "External" has currently no function. It though possible to use this in reports for complaints as a filter when printing information. This field is not displayed on smartphones.

13 Processing Measures

In the dialog for measure processing all information can be changed. Additional to the fields in the dialog for the measure collection, information to the degree of fulfillment and effectiveness in % can be carried out here.

Identical to the collection dialog selection lists for several fields are available or changes can only be carried out in the selection list.

Depending on the browser, a calendar opens to facilitate the completion of the date. This function is not supported by every browser. It is not supported by the Internet Explorer. If the calendar does not open, the date must be collected in the format "YYYY-MM-DD". The detailed display with date fields are displayed in the format "DD.MM.YYYY".

14 Processing Failure Types

All information can be changed in the dialog for failure type processing apart from the failure type.

15 Processing Documents

All information can be changed in the dialog to process document entries apart from the the collected position.

The field "Assignment" containing a selection list is also available for documents which have been collected for the complaint header or complaint detail. This field should only be used for document entries relating to a failure type.

Independent of the type assignment, the fields "Text" and "File name/address" are available. The field of the document type "Text" must be maintained. If this is not the case the field "File name/address" must be maintained.

The entry of a web link must be carried out in form of an <http://www.mpdv.de>. Entries in the form of www.mpdv.de cannot be displayed. .
