1 HYDRA@Web Attendance Overview - Summary

Purpose

This function package makes it possible to display an attendance overview in the Intranet or Internet.

Implementation notes

The function package is used if:

- you require an overview of present and absent employees on workplaces where MOC is not installed.

Integration

This function package can only be used if labor time is recorded in HYDRA (function package "entry and maintenance of labor times").

Features

- HYDRA@Web Attendance Overview
 - Display of employees present with indication of location where the clock-in took place
 - Presentation of planned absent employees with date of next planned attendance
 - List of employees who are unplanned absent or on leave according to labor time planning
 - Display of employee photograph stored in the HR master data
 - Opening of an e-mail with the employee's e-mail address entered in the HR master data

2 Attendance Overview

Overview

The current status of the employees is shown in the attendance overview:

Field descriptions

Status

Present

The employee has been present since the point in time displayed. The date is only shown if it deviates from the current date.

Absent

The *Absent since* status is displayed if the employee is absent and was present within the last 6 hours, and if no working time is scheduled at the current point in time.

Planned absent

The employee is absent and this absence was planned.

Unplanned absent

The employee is absent but should be present according to the scheduled shift time and/or core working time for flexitime and flexible shift employees.

Off

No working time has been planned for the employee at present. If the cursor is positioned on the status, more detailed information on the planned working time will be shown in the tooltip:

Off: The employee is absent and no working time is planned for the current day.

Off until: The employee is absent and should be present at the specified point in time according to the working time schedule.

Off since: The employee was unplanned absent and the planned shift and/or core time is already over.

Person does not clock

With employees for whom the *Person does not clock* flag is set in the HR master data, the "Person clocks status" flag is not displayed in the skeleton time.

Location

For employees who are present, the location of the terminal at which the employee clocked in is displayed in this column.

Present at

For absent employees, this column shows the date on which the employee should be present again according to current planning.

Any discrepancies in the attendance and absence overview may be due to the fact that persons forgot to clock out. These persons will be listed as absent on the next day at the latest.

The *Date* column for the *Status* category only shows a date if it deviates from the current day.

Function description

Detail view

The magnifying glasses at the beginning of each row open a detail view showing a picture for the relevant person:

The screenshot shows the 'Details of attendance overview' for a user. The interface is divided into a left sidebar and a main content area.

Left Sidebar:
