1 Supplier Assessment / Assessment Management

Purpose

This component is used if suppliers or departments are to be assessed for a specific period on the basis of previously created assessment catalogs. Assessment can be performed manually, but also automatically for some criteria. With regard to automatic assessment criteria, an appropriate data basis must previously have been entered in HYDRA, e.g. goods receipt inspections.

Implementation Considerations

If, for instance in the ERP system, supplier assessment is an integral part of the system, but there is no rating of quality criteria, HYDRA can determine these by using this application. In addition, it is also possible to perform a complete supplier assessment in HYDRA. Use is also recommended if a department-related assessment is to be performed.

Integration

This component considers the data of goods receipt inspection requirements and complaint management. These are the basis for automatic determination of quality-relevant statistical values.

Features

The following functions are available:

- Determination of limit values for rating in freely definable assessment classes (e.g. supplier classes)
- Free definition of assessment systems
- Determination of statistical values regarding to time and quantity-related deviations from specifications as well as from the supplied quality (WEP-PPW license required)
- Determination of statistical values regarding complaints (REK-EVA required)
- Creation of various assessment catalogs
- Free definition of assessment criteria with variable weighting
- Assessment of different organizations, e.g. suppliers, departments
- Comprehensive evaluations (e.g. supplier development, supplier comparison)

2 Criteria Analysis

Overview

Menu	Quality management → QM evaluation → Criteria analysis Quality management → Evaluation → Criteria analysis
Transaction code	suevaa
Function authorization	suevaa

This document provides a description of the "Criteria analysis" application in the Manufacturing Operation Center (MOC).

Usage

This evaluation can be used to visualize the development of assessment criteria over a period of time and/or compare the criteria over a period of time. To this end, the assessed party whose criteria you intend to observe needs to be selected in the filter.

Integration

This evaluation only uses assessments from Assessment Management.

Prerequisite

There are no specific prerequisites. The only prerequisite is the execution of assessments, e.g. supplier assessments.

Selection Criteria

Since the selection criteria are self-explanatory, they are not explained separately.

Toolbar

No other special function buttons are available in addition to the standard functions.

"Criteria in Comparison" Detail Applications

The data is displayed in a pivot table in combination with a graphic format with bar charts. Various application functions are available for the display. The assessment data previously filtered by selection criteria are used as the data basis.

The general pivot functions are not described in detail at this point. The remarks below are limited to the elementary functions of this evaluation.

Pivot evaluation offer the following advantages:

- Large data volumes can be summarized and presented quickly.
- Rows and columns can be rotated in order to have different summaries of source data displayed.
- Simple filtering by "drag & drop" with additional detail filter.
- The interactive presentation enables the data to be summarized and analyzed in various formats and with different calculation methods.

The following context menu can be opened by clicking the right mouse button:

The "Show field list" function enables selection of the fields to be used for the pivot analysis. The figure below shows a possible field list.

A screenshot of a software dialog box titled "Field list". The dialog has a close button (X) in the top right corner. Below the title bar, the text "Drag fields to pivot grid" is displayed. A list of fields is shown, each in a blue rectangular button-like box. The fields are: Catalog, Catalog idx., Class, Classification, Classification date, Drawing issue number, Evaluated organization name 2, Evaluated organization name 3, Evaluated organization type, Subject of evaluation, Total classification value, and Weighting. Below this list is an empty white rectangular box. At the bottom of the dialog, there is an "Add to" button and a "Filter area" dropdown menu with a downward arrow.

Field list

Classification	
Classification date	
Drawing issue number	
Evaluated organization name 2	
Evaluated organization name 3	
Evaluated organization type	
Subject of evaluation	
Total classification value	
Weighting	
Add to	Filter area ▼

The requested fields can be dragged and dropped into the evaluation area.

The "Show filter editor" function enables a further, flexible restriction of the data basis in addition to the

selection criteria.

By showing the settings, the following window is opened:

Activating the selection option allows content areas of the tabular presentation to be marked. In this case, the graphic format is based on the marked cells. An activated label display enables the sum total of the numbers from each bar to be shown.

The following figure illustrates these functions.

The sum function enables the Overall Result row in the bar graph to be shown also. If the selection function is activated, the overall result of the respective column is added to the respective bar when the Total Result row cells are marked accordingly.

By activating/deactivating the "Columns" option, the presentation switches between the graphic format of the respective number of columns and/or rows.

"Criteria Development" Detail Applications

In analogy to the "Criteria in comparison" detail application, there is also the analysis of criteria development featuring the same pivot functions.

"Assessment Basis" Detail Applications

The assessment basis shows the assessments filtered on the basis of the selection criteria applied, including the referenced data, in a list. The referenced data usually correspond to the field list for the pivot analysis.

3 Comparison of Assessed Parties

Overview

Menu	Quality management → QM evaluation → Comparison of assessed parties Quality management → Evaluation → Comparison of assessed parties
Transaction code	suevac
Function authorization	suevac

This document provides a description of the "Comparison of assessed parties" application in the Manufacturing Operation Center (MOC).

Usage

This evaluation may be used to compare several assessed parties with each other. Should several assessments for one assessed party be included in the filtered data, the latest version is always considered.

Integration

This evaluation only uses assessments from Assessment Management.

Prerequisite

There are no specific prerequisites. The only prerequisite is the collection of assessments in Assessment Management.

Selection Criteria

Since the selection criteria are self-explanatory, they are not explained separately.

Toolbar

No other special function buttons are available in addition to the standard functions.

"Comparison of Assessed Parties" Detail Applications

The data is displayed in a pivot table in combination with a graphic format with bar charts. Various application functions are available for the display. The complaint data previously filtered by selection criteria are used as the data basis.

The general pivot functions are not described in detail at this point. The remarks below are limited to the elementary functions of this evaluation.

Pivot evaluations offer the following advantages:

- Large data volumes can be summarized and presented quickly.
- Rows and columns can be rotated in order to have different summaries of source data displayed.
- Simple filtering by "drag & drop" with additional detail filter.
- The interactive presentation enables the data to be summarized and analyzed in various formats and with different calculation methods.

The following context menu can be opened by clicking the right mouse button:

The "Show field list" function enables selection of the fields to be used for the pivot analysis. The figure below shows a possible field list.

The screenshot shows a window titled "Field list" with a close button (X) in the top right corner. Inside the window, there is a section labeled "Drag fields to pivot grid". Below this label is a list of fields, each in a blue-bordered box:

- Catalog
- Catalog des.
- Catalog idx.
- Class
- Class designation
- Classification date
- Drawing issue number
- Evaluated organization name 2
- Evaluated organization name 3
- Evaluated organization type

Below the list is an empty white rectangular area. At the bottom of the window, there is a button labeled "Add to" and a dropdown menu labeled "Filter area" with a downward arrow.

The requested fields can be dragged and dropped into the evaluation area.

The "Show filter editor" function enables a further, flexible restriction of the data basis in addition to the

selection criteria.

By showing the settings, the following window is opened:
